ARB Compliance Offset Program

Questions have arisen regarding the version(s) of submittals that must be attested, and the timing of those attestations. To provide direction going forward, ARB interprets the Regulation as follows. Where the Regulation requires that a submittal be attested, an attestation must be included with each and every version of that submittal for the submittal to be considered valid and timely. This applies to all submittals for which an attestation is required, including those required by section 95975(c) for Listing, section 95976(d)(6) for the Offset Project Data Report, and section 95977.1(b)(3)(R)4 for the Offset Verification Statement. During the next round of regulatory amendments, ARB will revisit the regulatory provisions regarding attestations to provide additional clarity on this topic.
