The present regulation limits vehicle speed to 25mph is preventing mass appeal of EV, raising the speed would allow greater acceptance of EV by the general public for use on public roads.

If you need a big reason why - take a 25mph limited EV on city streets that are marked at 35 mph. Watch the backlog and honking that will follow you around as you go about your day.

Comment:

I highly encourage CARB to do the right thing and stick with the current ZEV requirements as a minimum. Today's technology can do the job for America and the world. Californians are ready to lead the world in this area. Please represent us correctly. We need to hold our ground and push the auto manufacturers to live up to the agreements they proposed before and not water the mandate down further.

I also ask that you consider adding MSEVs either to the mandate or relax the rules so that they are permitted access to our roads as they offer a great chance for fledgling car companies to get started.

I also ask that you permit Battery vehicles that can be 'refueled' with 100 miles worth of fuel in 10 minutes to qualify just as fuel cell vehicles can and permit new manufacturers to sell credits for the vehicles they make. This should include original equipment as well as conversions.

During our Market focus study for our NEV, we realized how important it will be to increase the speed in urban commuting to 35mph, it is safer and more people will be more willing to help the imminent climate crisis by purchasing a MSV. The NEV at 25mph does not appeal to most people apart from the retirement communities and that is not enough. If California can lead the way we can follow suit in Florida too. Thank you.

Subject: Medium Speed Electric Vehicles

Comment:

One of the main obstacles to getting consumers to purchase electric vehicles is the outmoded law based on golf cart style NEVs that prohibits the new generation of MSEVs from entering the normal flow of city traffic. These cars have safety features (seat belts, welded aluminum frames) that allow them to be driven safely at 35mph increasing their usefulness (and ultimately their drivers' safety). The law should be brought up to speed with the new technology, creating a viable alternative to gasoline powered cars for short haul urban and suburban driving. Don't let Detroit dictate what vehicles Californians will drive.

Beyond simple licensing these vehicles could be given incentives including free parking at meters, free charging stations, etc.

First Name: Richard  
Last Name: DeLoach  
Email Address: dickdeloach@gmail.com  
Affiliation: DUB Magazine

Subject: MSEV Legislationnnnn  
Comment:

Several states (Oregon, Montana, Washington) have adopted MSV (Medium Speed Vehicle) regulations permitting PURE ELECTRIC VEHICLES to attain maximum speed of 35 MPH and otherwise conform to FMVSS #500 (LSV).

We are asking that MSV "definition" is included in the proposed ZEV regulations, so that further steps to include it in California Vehicle Code and also get new class (MSV) established on a Federal level by NHTSA can be undertaken.

CITY MSVs, capable of 35-MPH top speed in typical traffic would be far more attractive to California consumers as second and/or third in family vehicles.

Sincerely,  
Richard DeLoach  
A Concerned California Taxpayer

Subject: Raise the speed limit to 35 miles per hour on all-electric vehicles

Comment:

We are totally in support of raising the California speed limit for electric vehicles to 35 miles per hour. If the speed limit were raised to 35 miles per hour we would be interested in buying an electric vehicle to use for "in town" errands. First of all, it would be safer to drive a car in the city that travels as fast as other vehicles, and secondly, if more people did the same we would have better air quality and a cleaner environment. Thank you for changing the speed limit for all electric vehicles. Catherine Whitmore

Comment:

MSV would help California economically as well as ecologically. Californians are forced to spend more than ever on gas, which also ties directly to the issue of national security. We live in the heart of L.A., where many commuters have taken increasingly to bikes and scooters. The traffic rarely moves fast enough to be hampered by a 35 mile per hour speed limit.  
Make it happen.

Please set the speed at 35 mph, rather than 25, since this is better suited to stay with traffic on city streets, and would make people more inclined to buy a safe neighborhood electric vehicle.

Comment:

One thing that prevents a greater acceptance of the ZEV or electric car is the ridiculous limitation of 25 mph. In a great part of this state, 25 mph means only sidestreets and a prohibition to more direct routes where the speed limit dictates a minimum of 30-35 mph. It renders electric or ZEV's near useless for anything more than the nearby grocery store. In some cases, even that is but a dream.

Please allow the increase of ZEV's to 35 mph from the overly restrictive 25 mph.

Thank you

Comment:

We urge you to support the 35 MPH zero emission vehicles in the State of California. The existing 25MPH limit is not very practical and more dangerous. The higher speed limit allows the vehicle to keep up with the traffic on most City streets. The 35 MPH zero emission vehicles are definitely much safer than any motorcycle which are now legal in California.

Comment:

Dear Members of the Board:

As an environmentally conscious California resident and consumer, I have been hoping for a long time that my next vehicle will be a zero emissions, completely electric car.

Unfortunately, because the vast majority of these cars are manufactured to attain low to moderate speeds, it is unlikely that I will be able to use them. Most of the main arterial streets in my neighborhood (and many others) have a posted speed limit of 35 to 40 mph - far above the current manufacturing specs of the most readily available neighborhood-style electric vehicles.

Electric vehicles do a great service to the communities they appear in - creating less pollution, while simultaneously reducing our dependence on foreign sources of oil. As gas prices continue to rise, the people of California are looking to you to help put in motion the circumstances that will allow us to move forward into a new, greener economy.

Amending the definition of a Medium Speed Vehicle (MSV) to allow pure electric vehicles to attain a maximum speed of 35 mph (or higher) will open up the electric vehicle market to a broader range of consumers - and that, in my opinion, can only bring good things to California.

Thank you very much for your time and hard work,

Sincerely,

Mandalyn K. McClelland

Subject: electric Vehicles

Comment:

I would be driving one of these today but for the inane 25 mph limit. Please raise this to at least 35. Many more people would purchase these vehicles. We are not going to be driving these on the freeway but I want to be able to drive on something other than residential streets.
