Comment:

Dear California Air Resources Board:

You are currently proposing that the Tier 1 ceiling for small plug-in-hybrid conversion be 10 vehicles. Please support this nascent--and very important--industry by raising the ceiling to 100 vehicles. This will give enough room for innovative startups to achieve profitability without having to overcharge (and therefore discourage) potential customers.

Thank you,

Robert Silvey

Subject: Tier Ceiling for Plug-In Hybrids

Comment:

I am writing to express my concern at the proposal to set the Tier 1 Plug-In Hybrid ceiling at 10, which would effectively kill the small businesses that picked up the hybrid/electric ball when Detroit dropped it. Please consider setting the Tier 1 ceiling to 100 so that the movement towards Plug-In Hybrids, which would tremendously reduce auto emissions, can continue unhampered by special interests. CARB should be doing all it can to stimulate and support the PIH mission and this can be one piece of that puzzle.

Thank you for your time.

Subject: Reasonable Standards

Comment:

Dear California Air Resources Board, please support the California Plug In Hybrid conversion industry by raising the Tier 1 ceiling to 100 vehicles up from the currently proposed 10.

Please read my previously published letter to the editor on this subject:

To the Editor,

The California Air Resources Board dashed the first true progress that was made on electric cars in this country, as chronicled in the documentary Who Killed the Electric Car. They are poised to do it again, this time to the plug in hybrid vehicle. They are poised to make a ruling that will cripple the nascent plug in hybrid conversion industry by imposing onerous testing and warranty standards that capital poor entrepreneurs cannot provide. In the process they will violate their own mandate to reduce global warming pollution. They are validly concerned about air pollution that can increase when a hybrid's gas engine is started less frequently. However, conversion companies have since found that simply having their software turn on the gas engine for a period whenever the car starts renders these air quality issues null. Given that the air quality issues are now gone, and with CARB's mandate to reduce global warming pollution, CARB has no rational choice but to work these conversion companies to find an equitable solution to keep plug in hybrids on the road. I'd rather not have to watch another documentary in five years about how CARB could have done the right thing but didn't.

Sincerely,
Daniel Bell

Subject: Please increase Tier 1 limit to 100 vehicles

Comment:

Dear California Air Resources Board,

Plug In Hybrids not only clean the air, they also help slow global warming and break our addiction to oil, while fostering innovation and creating good, green jobs here in California. There are many new, mission-based companies trying to do the right thing for California by offering various conversion technologies. While CARB is right in requiring confirmation on the efficacy of these 'conversions', the cost will be excessive for most providers under the current rules.

Please consider increasing the Tier 1 vehicle limit to 100 vehicles, supporting the advent of acceptable and certified plug-in vehicles.

Subject: Plug-in hybrid electrical vehicle test procedure amend.

Comment:

After reviewing the proposed requirements for tier 1 certification requirements, I believe that the 10 vehicle maximum becomes way too restrictive for small companies that do conversions of hybrid vehicles to plug-in hybrid. The Tier 1 maximum number of converted vehicles should be set at 100 as to properly allocate reasonable testing costs to each vehicle produced. Putting the number at 10 becomes so restrictive, it defeats the spirit of what these small companies are setting out to achieve. Let's get realistic and support the entrepreneurs who are working hard to make a difference in climate change.

Comment:

Dear Commissioners and Staff-

The PHEV conversion industry is working hard to bring clean, electrified transportation to California.
I am writing to ask you to support raising the Tier 1 ceiling to 100 vehicles from the currently proposed 10.
PHEV companies are working in a recession economy to refine their products, raise capital and fit into the compliance market, please do not add constraints to their progress.
PHEV conversion kits undergo constant refinement in order to bring a better product to customers. If every time we beta test a new product with ten vehicles on the road, companies are required to spend thousands testing the product, product refinement will be greatly slowed down.
Please follow the intention to create an electrified transportation market by increasing Tier 1 to 100 cars.
Sincerely,
Claudia Eyzaguirre

Last Name: Nichols

Email Address: mattnichols2929@gmail.com

Affiliation: City of Berkeley

Subject: Raise PHEV Teir 1 ceiling to 100

Comment:

Today, the City of Berkeley launched a partnership with 3Prong Power and City Carshare to provide a PHEV vehicle for City employees and the public.

Now I learn that this single vehicle would use up 10% of the Tier 1 PHEV ceiling for 3Prong, a Berkeley-based business.

This is unacceptable, and a rather absurd ceiling that will completely stunt the growth of start-up businesses. These businesses create green jobs which are vitally important to California.

Please support the California Plug In Hybrid conversion industry by raising the Tier 1 ceiling to 100 vehicles up from the currently proposed 10.

We cannot rely solely on the motor vehicle manufacturers to innovate - especially if it does not create jobs here. ARB also cannot in good conscience hold up PHEV industry because of air-quality emissions testing on a technology that is inherently less polluting. The irony is fairly stunning, don't you think?

I hope ARB will do the right thing and raise the Tier 1 ceiling to 100.

Thank you,

Matt Nichols

Principal Transportation Planner, City of Berkeley

Subject: Allowing innovation among PHEV Conversion companies

Comment:

I am writing to comment on the proposed test procedures for plug-in hybrid electric vehicles. I understand that for a company which would market conversions from ordinary hybrids to plug-in hybrids, there are proposed to be tiers defining escalating testing requirements, based on the number of conversions sold. This seems like a good approach. However, the current proposal, that Tier 1 would be only applicable until 10 conversions were sold, does not appear workable.

The few, small and yet highly innovative conversion companies would be hampered by both the high cost of the Tier 2 requirements, which would need to be amortized over only 10 Tier 1 sales, and also by the need to cease innovating and lock in on a design at this early stage. Neither of these are desirable, especially in the current credit market in which these small companies would find it nearly impossible to obtain capital in the early stage of their operation. As a co-founder of a silicon valley product design firm, I am well aware of the difficulties faced by small businesses with great ideas.

Please amend the proposal to raise the Tier 1 definition from 10 conversions to 100 or more.

Thank you for your support of the exciting new developments now being led by individuals and small businesses who are injecting a great deal of creativity into the U.S. automobile market. The potential benefit of the rapid development of PHEVs on global warming pollution, both directly in reduced tailpipe emissions and indirectly through grid stabilization, is too large to miss. The effect on the economy of California and the United States is also potentially very beneficial.

Subject: Support of higher levels of PHEV conversions
Comment:

To Whom It May Concern,

Coulomb supports raising the tier 1 limit on PHEV conversions from
10 to 100 vehicles.

Our reasoning is that we believe the OEM manufacturers will not be
able to meet demand for PHEVs in the next few years and we should
enlist conversion mechanics to help move the industry forward.

Yours truly,
Richard Lowenthal
CEO, Coulomb Technologies

Comment:

Dear Board Members, as an owner of a Prius Hybrid Plug-In, I urge you to consider raising the Tier One ceiling to 100 vehicles up from the current proposed 10. It would be a shame to put excessive costs onto this small business outfit which is trying to address problems caused by traditional gas burning vehicles. We need to try to be more supportive. Thanks for your consideration. Alan Gulick, MD

Comment:

Dear CARB,

I have been driving electric cars for 8 years, with 90,000 miles on our Toyota RAV4 EV, and growing miles on our young Telsa. We power our EV's with solar, but would love to do the same for our hybrids; a prius and a 400H, from which all the energy currently comes from gasoline.

Please support the California Plug In Hybrid conversion industry by raising the Tier 1 ceiling to 100 vehicles up from the currently proposed 10.

Respectfully,

Dan Shugar

Subject: CARB fails california once again, in favor of big business

Comment:

Dear California Air Resources Board,

I lost confidence in ARB years ago when the plan for flex fuel requirements by 2012 was scrapped. And let's all remember "Who Killed the Electric Car."

I know we produce oil in California and that it makes us money, but hasn't the world gone past those kind of short sighted motivations. California has a chance to let this one play a little lose and then play politics and greed games next year. So please support the California Plug In Hybrid conversion industry by raising the Tier 1 ceiling to 100 vehicles up from the currently proposed 10.

Comment:

Dear California Air Resources Board,

Please support the California Plug In Hybrid conversion industry by raising the Tier 1 ceiling to 100 vehicles up from the currently proposed 10.

This will further the development of key technology that speeds the transition from petroleum-fueled vehicles to those powered, where possible, by locally generated solar power. This trend will result in lower energy consumption overall, and cleaner air as we make the switch to more environmentally responsible forms of energy to run our automobiles.

In addition, the plug-in conversion business is a model of the local, independent, and forward-thinking enterprise that we sorely need to find creative solutions to the problems that face us as a society.

respectfully,
Alice Benedict

Subject: Tier 1 Plug-in Hybrid Cap
Comment:

Dear California Air Resources Board,

Please set the Tier 1 cap for small Plug-in Hybrid companies to 100 cars. We understand the importance of insuring that the conversions do not negatively impact air quality. It is also important that early adopters have a reasonably priced path to conversion. A cap of 100 conversions for Tier 1 installers, I feel provides a very small company with the ability build a small customer base and at the same time plan and prepare for expensive second level of testing required for Tier 2 companies.

We converted our 2007 Prius in Dec 2008. It is part of our plan to put in solar PV on our house and make other improvements in our lifestyle which will help reduce our carbon footprint. Driving with a plug-in has not made it possible for us to drive without gasoline on a daily basis (we drive about 15,000 miles annually). By driving a plug-in hybrid, I have learned or been reminded about things I can do to improve my milage when powered by the gasoline engine as well as re-thinking how often I actually need to use an automobile at all. We have sold our second car and I now commute completely using public transit (ACTransit and BART).

Please help this new industry to survive these early years.

Regards,
Alex Benedict

Subject: Opposed to Tier 1 limit
Comment:

The Tier 1 limit for plug in hybrid manufacturers needs to be higher than the proposed 10. Best would be 50-100.

Let's take a look at this very entrepreneurial industry.

\$7500 average cost of plug in conversion
\$2000 average profit on each conversion

\$20,000 income cap on entrepreneur based on limit of 10
\$200,000 income cap on entrepreneur based on limit of 100

A cap of 10 does not allow anyone to make a living.
The need for emissions testing is not compelling

Plug in conversions lower emissions, they do not raise them.

Comment:

Dear California Air Resources Board, please support the California Plug In Hybrid conversion industry by raising the Tier 1 ceiling to 100 vehicles up from the currently proposed 10. I live in a state which often follows the CA example in the are of auto emissions, and if we are going to deal with the threat of global climate change we need to start converting our auto fleet to Plug-In Hybrids. Overly-burdensome regulations at this stage may just kill the development of the conversion industry. Please consider less restrictive limits on this important and growing market.

Subject: Support the California Plug-In Hybrid Conversion Industry!
Comment:

Dear California Air Resources Board,

Please support the California Plug-In Hybrid conversion industry by raising the Tier 1 ceiling to 100 vehicles up from the currently proposed 10.

The proposed Tier 1 tops out at just 10 units sold, forcing very young companies into Tier 2, where they must spend close to \$200,000 on laboratory emissions testing among other requirements. Capping Tier 1 at 10 sales effectively adds \$20,000 to the cost of each of those first 10 conversions.

A better alternative would be to set the Tier 1 cap at 100 vehicles. This would reduce the added cost of testing to just \$2,000 per vehicle, which is manageable if not ideal. Capping Tier 1 at 100 sales instead of 10 will also give small companies time to gain important customer feedback, to grow the market, and to refine their designs before one version gets "locked in" as the only CARB-certified design a company can sell.

Raising the Tier 1 cap from 10 vehicles to 100 will not harm air quality because the regulations in Tier 1 require a company to show through detailed engineering analysis that its modifications to the vehicles will only reduce air pollution, and never increase it.

Plug-In Hybrids not only clean the air, they also help slow global warming and break our addiction to oil, while fostering innovation and creating good, green jobs here in California. CARB should be supporting California's Plug In Hybrid conversion companies, not squashing them.

Please raise the California Plug-In Hybrid conversion Tier 1 ceiling to 100 vehicles up from the currently proposed 10.

Thank You.

Sincerely,

William Young

Dear California Air Resources Board, please support the California Plug In Hybrid conversion industry by raising the Tier 1 ceiling to 100 vehicles up from the currently proposed 10.

I'm a Prius owner and I would have loved to buy a plug-in option for my car. One way to encourage large companies to spur innovation is to allow fierce small business competition. Plug-in conversion kits will only help keep our streets air clean. Thanks to President Obama's energy stimulus package our electric grid will get smarter and greener, so we should be using as many green energy sources as we can. Please allow this small industry to stay alive for the future of clean air in California.

Comment:

California Air Resources Board,

Dear California Air Resources Board, please support the California Plug In Hybrid conversion industry by raising the Tier 1 ceiling to 100 vehicles up from the currently proposed 10.

My name is Don Messamer I am a 40 Yyear old father of 2 and a paramedic in Santa Clara County. I live in Modesto and commute to Sunnyvale 1 to 3 times per week in my prius. I intended to convert my car to a Plug In Hybrid as soon as I can afford to do so. Some of the conversions available would enable me to do much of my driving at home in Modesto on fully electric power. I could reduce my carbon foot print by close to 50%. If the Tier 1 ceiling is reduced to 10 units this will increase the cost of an already expensive product and decrease competition and inovation. Many of the small start up companies will not have the capital to succeed in an already difficult economic time. Please raise the Tier 1 ceiling to at least 100 if not higher.

Thank You Sicerely,

Don Messamer

future Plug In Hybrid Conversion customer

I understand you are contemplating a Tier 1 limit of 10 vehicles. Since this industry is barely getting going I advocate at least 100 vehicles for Tier 1. Note that all effort in the PHEV industry can only help vehicles, and that existing engineering reporting requirements provide assurance that air quality will not suffer.

Thank you

Comment:

Dear California Air Resources Board,

The proposed Tier 1 ceiling of 10 vehicles will impose unacceptable costs on newly established plug-in hybrid conversion companies, most likely driving them out of business. I support the proposal to establish this ceiling at 100 vehicles, which is far more reasonable.

Dear California Air Resources Board,

Please support the California Plug In Hybrid conversion industry by raising the Tier 1 ceiling to 100 vehicles up from the currently proposed 10. I don't live in California, but California's standards often become the standards of the country. I got a Hymotion conversion for my Prius last year. I proudly show off my car everywhere I go, (from Florida all the way to California) and happily educate people about plug-ins when they are invariably intrigued by my "100 mpg plug-in" bumper sticker. Please help facilitate this all important move forward in vehicle technology.

Comment:

Dear California Air Resources Board,

Please support the California Plug In Hybrid conversion industry by raising the Tier 1 ceiling to 100 vehicles up from the currently proposed 10.

This has implications well beyond California, and potentially could affect the viability of companies (and their suppliers) that now convert Priuses and Ford Escapes, but may convert internal combustion gas guzzlers in the future.

Our family is waiting to buy a much-needed new vehicle until we can plug it in! Please don't delay the progress that is being made at this pivotal time in our transportation infrastructure.

Thank you,

Ross F. Guldenbrein
Jean M. Lyon
