Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Subject: Objection to Advanced Clean Fleets
Comment:

April 7th, 2023

Clerk of the Board
California Air Resources Board
1001 I Street, Sacramento, California 95814

RE: Modifications for the Advanced Clean Fleets Regulation

As the third generation of a family-owned business in our 90th year in operation in California we are writing you to as the employer of 64 people who work full-time in the fuel sales and transportation segment on the Central Coast of California. Our customers depend on us to deliver produce, grow their crops, build roads, buildings and the infrastructure used throughout California and to provide emergency services for police, fire, and ambulance services.

JB Dewar Inc. respectfully opposes the adoption of modifications to the Advanced Clean Fleets rule as it continues its attempts to transition the transportation and goods movement economy much too quickly without sufficient regard for the necessary infrastructure overhaul in the state, a realistic consideration of the state's power grid capabilities, and the lack of an adequate and accurate cost analysis.

Modifications to the regulation's proposed timeline still do not address the significant strain on the transportation industry and will continue to gravely hamper goods movement in the state. Additionally, the cost of replacing fleets with entirely zero emissions vehicles will unduly harm small businesses in the state, many of which are family- and minority-owned. With the limited supply and options for heavy duty ZEVs, large companies with greater capital will be prioritized by manufacturers as compared to their small business counterparts. The highly restrictive timeline that continues to be proposed in the modifications will only serve to further exacerbate this problem in the market.

JB Dewar Inc. continues to have significant concerns because the regulation's modifications do not sufficiently consider the current and future needs of the transportation industry within the state. The range of vehicles that are currently offered on the market will not ensure a seamless transition, as many heavy-duty vehicles are often used continuously to ensure the timely delivery of goods to other businesses and consumers. Moreover, the infrastructure necessary to support a full transition to zero emission fleets is not prevalent enough to serve the vast number of vehicles CARB

intends to replace. This regulation, even as modified, will be a major disruptor to the state's supply chains, which will increase the cost of goods at every level, and negatively impact our most vulnerable communities and residents the most.

For these reasons, we must continue to respectfully oppose the adoption of the Advanced Clean Fleets rule as modified.

Ken Dewar
President
JB Dewar Inc.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Subject: I support the Advance Clean Fleets rule!

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Subject: I support the Advance Clean Fleets rule!

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Subject: I support the Advance Clean Fleets rule!
Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Subject: I support the Advance Clean Fleets rule!

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Subject: I support the Advance Clean Fleets rule!

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Subject: I support the Advance Clean Fleets rule!

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Subject: I support the Advance Clean Fleets rule!

Comment:

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

I urge CARB to take comprehensive and strong action require the construction of new clean renewable energy power sources to power electric vehicles, and then to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a sustainable future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits. Of course requiring electric vehicle fleets will do NOTHING to reduce emissions in all the areas where the power to charge these vehicles is still coming from fossil fuel power plants. We need new clean, renewable energy sources to replace the dirty, carbon emitting fossil fuel power plants that are increasingly being drawn on to charge these vehicles. In all of the areas relying on fossil fuel power plants to power electric vehicles, they're only moving the emissions from the tail pipe to the smokestack!

Please, make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Subject: I support the Advance Clean Fleets rule!

Comment:

CARB is obligated to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order that requires 100% of heavy-duty truck fleets in California to be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Make sure to adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

I urge CARB to take comprehensive and strong action to adopt the strongest possible ACF rule! There is no time to waste in addressing air pollution in our state, especially from the transportation sector. The time is definitely here for serious, practical measures like this to improve our communities and the air we, our families, children and animals are breathing!

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. I am an educator in Southern California and I am alarmed by the growing rates of asthma and respiratory issues occurring in our children. PM 2.5 and other air pollutants have been linked directly to these ailments: everyones health is affected. Do the right thing NOW and put us on a logical and necessary path to healthy air and to stopping Global Warming!!!

Comment:

I urge you, California Air Resources Board to adopt the strongest and most stringent possible Advanced Clean Fleets (ACF) rule. Lets act to provide all state residents and visitors the least polluted air possible.

A strong ACF rule implements a zero-emission purchase requirement for fleets of medium and heavy-duty trucks and would set targets for 100% electric vehicle (EV) sales by 2036, addressing a huge source of Californian pollution and making great progress towards achieving Gov. Newsoms executive order requiring 100% of heavy-duty truck fleets in California be zero-emission by 2045.

Adopting the strongest possible ACF rule would also be a large step towards a more equitable and just future for all. Low-income and communities of color bear an unfair burden of harmful pollution from these trucks as a result of generations of systematic marginalization and this rule would improve air quality in communities of color in close proximity to warehouses and distribution centers all the while generating more than \$10 billion in societal benefits.

Please, adopt the strongest version of the ACF rule and help California achieve an equitable future free of air pollution.

Thanks for your consideration of my opinion.
