Subject: fight against air pollution, climate change and chronic illness

Comment:

Dear Chairman Nichols,

I am writing to thank you for your leadership on climate change policy and to encourage the California Air Resources Board to support public health by establishing the most ambitious regional greenhouse gas reduction targets possible under SB375.

Establishing strong targets will clearly signal the need for a departure from business as usual sprawl and support more sustainable communities throughout California where residents have healthier, physically active walking, biking or transit alternatives to driving.

Improving California's land use and transportation planning processes to reduce our dependency on driving offers a wide range of benefits to our communities. Along with reducing our ongoing air pollution-related public health crisis and cutting our contributions to climate change, promoting opportunities for daily physical activity will reduce the burdens faced by our children, the elderly and others living with chronic illnesses like asthma, obesity, diabetes and depression.

Please continue to support public health by establishing strong regional greenhouse gas targets.

Comment:

Dear Chairman Nichols,

As a resident of the smog-choked San Gabriel Valley, I am writing to thank you for your leadership on climate change policy and to encourage the California Air Resources Board to establish the most ambitious regional greenhouse gas reduction targets possible under SB375.

The time has come for California to become serious about sustainable development. Establishing strong targets will strongly support the creation of more livable communities that promote healthier, less sedentary lifestyles.

Improving California's land use and transportation planning processes to reduce our dependency on driving offers a wide range of benefits to our communities. Along with reducing our ongoing air pollution-related public health crisis and cutting our contributions to climate change, promoting opportunities for daily physical activity will reduce the burdens faced by our children, the elderly and others living with chronic illnesses like asthma, obesity, diabetes and depression.

Please continue to support public health by establishing strong regional greenhouse gas targets.

Subject: Support a strong AB 375
Comment:

Dear Chairman Nichols,

As a physician I know the burdens faced by our children, the elderly and others living with chronic illnesses. While in Fresno I ran an asthma program where close to 20% of the children have Asthma. Here in Martinez (Contra Costa Co.) I see obesity, diabetes, hypertension, depression and Arthritis daily -all related to inactivity and "the car culture". I believe a change is possible through supporting AB 375.

Policy to support public health by establishing the most ambitious regional greenhouse gas reduction targets must happen -recent events in the Gulf, and our severely impacted (polluted) air await our work.

I lived in Fresno for a dozen years - I know sprawl, and the disconnected, developer driven urban nightmare it creates.

Business as usual cannot continue. We must promote physically active walking, biking or transit alternatives to driving, and put more than 1 or 2% of our transit budget into biking/walking.

Please continue to support public health by establishing strong regional greenhouse gas targets that support getting us active!!

California deserves a healthier population.
Thanks for moving us in that direction and your support of AB375.

Dr. David Pepper

Comment:

Dear Chairman Nichols,
I am writing to thank you for your leadership on climate change policy and to encourage the California Air Resources Board to support public health by establishing the most ambitious regional greenhouse gas reduction targets possible under SB375. Establishing strong targets will clearly signal the need for a departure from business as usual sprawl and support more sustainable communities throughout California where residents have healthier, physically active walking, biking or transit alternatives to driving. Improving California's land use and transportation planning processes to reduce our dependency on driving offers a wide range of benefits to our communities. Along with reducing our ongoing air pollution-related public health crisis and cutting our contributions to climate change, promoting opportunities for daily physical activity will reduce the burdens faced by our children, the elderly and others living with chronic illnesses like asthma, obesity, diabetes and depression. Please continue to support public health by establishing strong regional greenhouse gas targets.

Sincerely,

Debra Webb

Comment:

Smart growth is a Public Health Priority

Next week, the California Air Resources Board (CARB) will meet to consider progress in planning for sustainable communities under SB 375, the Sustainable Communities and Climate Protection Act. CARB will soon be releasing draft targets for each region in the state to reduce greenhouse gas emissions from passenger vehicles through improved land use and transportation planning under this law. In September, CARB will finalize these targets and move the state one step closer to meeting our clean air and climate goals. Help us send a message that California must adopt strong targets to challenge each region to depart from business-as-usual sprawl in favor of healthier, sustainable communities.

Sustainable communities are key in the fight against air pollution, climate change and chronic illness

California is home to some of the worst air pollution in America largely because so many of our communities have been built for cars and offer few safe and practical pedestrian, bicycle or transit alternatives to driving, even for the shortest trips. Our dependence on driving worsens our air pollution health crisis, global warming, and robs us of opportunities to incorporate physical activity into our daily lives. Improving options for more physically active transportation will help to reduce a wide range of chronic illnesses like asthma, obesity, diabetes, depression and heart disease (read more in our "Land Use, Climate Change and Public Health Issue Brief").

Support healthier, more livable communities throughout California

Please take a moment to write to Mary Nichols, Chairman of California Air Resources Board to voice your support for strong targets and healthier communities.

Copy and paste the following message into the Message field on the Air Board web site by Wednesday, June 22 at noon.

Dear Chairman Nichols,

I am writing to thank you for your leadership on climate change policy and to encourage the California Air Resources Board to support public health by establishing the most ambitious regional

greenhouse gas reduction targets possible under SB375.

Establishing strong targets will clearly signal the need for a departure from business as usual sprawl and support more sustainable communities throughout California where residents have healthier, physically active walking, biking or transit alternatives to driving.

Improving California's land use and transportation planning processes to reduce our dependency on driving offers a wide range of benefits to our communities. Along with reducing our ongoing air pollution-related public health crisis and cutting our contributions to climate change, promoting opportunities for daily physical activity will reduce the burdens faced by our children, the elderly and others living with chronic illnesses like asthma, obesity, diabetes and depression.

Please continue to support public health by establishing strong regional greenhouse gas targets.

Dear Chairman Nichols,

As a 75 year old sufferer from bronchiectesis due to pollution in the air, I am writing to thank you for your leadership on climate change policy and to encourage the California Air Resources Board to support public health by supporting regional greenhouse gas reduction targets possible under SB375.

Establishing strong targets will clearly signal the need for a departure from urban sprawl and support more sustainable communities throughout California. WE NEED HEALTHIER, WALKABLE, BIKING, AND TRANSIT ALTERNATIVES TO DRIVING.

Along with reducing our ongoing air pollution-related public health crisis and cutting our contributions to climate change, promoting opportunities for daily physical activity will reduce the burdens faced by our children, the elderly and others living with chronic illnesses like asthma, obesity, diabetes and depression.

Please continue to support public health by establishing strong regional greenhouse gas targets.

Dear Chairman Nichols:

I am writing to thank you for your leadership on climate change policy and to encourage the California Air Resources Board to support public health by establishing the most ambitious regional greenhouse gas reduction targets possible under SB375. •@ Establishing strong targets will clearly signal the need for a departure from business as usual sprawl and support more sustainable communities throughout California where residents have healthier, physically active walking, biking or transit alternatives to driving. •@

Improving California's land use and transportation planning processes to reduce our dependency on driving offers a wide range of benefits to our communities. Along with reducing our ongoing air pollution-related public health crisis and cutting our contributions to climate change, promoting opportunities for daily physical activity will reduce the burdens faced by our children, the elderly and others living with chronic illnesses like asthma, obesity, diabetes and depression. •@

Please continue to support public health by establishing strong regional greenhouse gas targets.

Subject: Support & personal story

Comment:

Dear Chairman Nichols,

Currently, I am a renter in Canoga Park, CA, (Los Angeles area) and I have a foot injury, no car. I have only had a car 2 years out of my entire 31 year life. Now I am facing a big issue. I would be biking, but I live on the second story. Being a girl, I have little upper body strength and with this foot injury, I am forced to retire my bicycle use. IF, however, there were laws in place that made it illegal for apartments not to provide SAFE, BICYCLE PARKING, this would not be an issue and I could get to work and home safely by bike. Instead, I have to worsen my condition by walking or pay a lot of money to support our bus system which is causing pollution (I would rather not pollute at all and save my money to buy food!!!). Below is a form letter of my appreciation, but i just wanted to make sure my personal story was heard. With your support, maybe an apartment mandate regarding bicycle parking is in store in the future (I truly, truly hope so...)

I am writing to thank you for your leadership on climate change policy and to encourage the California Air Resources Board to support public health by establishing the most ambitious regional greenhouse gas reduction targets possible under SB375. 　

Establishing strong targets will clearly signal the need for a departure from business as usual sprawl and support more sustainable communities throughout California where residents have healthier, physically active walking, biking or transit alternatives to driving.

Dear Chairman Nichols,

Please work to have the California Air Resources Board improve our public health. For the sake of all of us and future generations. establish regional greenhouse gas reduction targets under SB375.

We need to find a whole new way to live. I could weep when I see the lines of commuters....the freeways that look more like a parking lot. Long commutes, a result of sprawl. Cars rather than bikes due to sprawl and unsafe roads for cyclists. Kids driven to school because we lack walkable communities.

Two out of three grandchildren born in California suffer from asthma, even though they come from athletic families with good nutrition.

Please help our public health. It's economical. It's humanistic. It makes sense.

Comment:

Chairman Nichols,

I am writing to voice strong support for CARB's effort to set targets for Senate Bill 375.

My family of four has thrown away our second car and done our best to bike places within 10 miles. Problem is, three of four of us have asthma and allergies, which we know is exacerbated by car and diesel truck exhaust. We would appreciate any bill that has as part of its goal the reduction of toxic emissions from industry or vehicles... especially one that makes our communities more bike friendly. Not sure if we are alone, but because of the unhealthy air quality that we find in most parts of CA, we are considering a move.

Thank you for all that you do to help us breathe easier.

Mark Szymczak
Pleasanton, CA Resident.

Subject: SB375
Comment:

Dear Chairman Nichols,
I am writing to thank you for your leadership on climate change policy and to encourage the California Air Resources Board to support public health by establishing the most ambitious regional greenhouse gas reduction targets possible under SB375. 　
Establishing strong targets will clearly signal the need for a departure from business as usual sprawl and support more sustainable communities throughout California where residents have healthier, physically active walking, biking or transit alternatives to driving. 　
Improving California's land use and transportation planning processes to reduce our dependency on driving offers a wide range of benefits to our communities. Along with reducing our ongoing air pollution-related public health crisis and cutting our contributions to climate change, promoting opportunities for daily physical activity will reduce the burdens faced by our children, the elderly and others living with chronic illnesses like asthma, obesity, diabetes and depression.　
Please continue to support public health by establishing strong regional greenhouse gas targets.

Comment:

Dear Chairman Nichols,

I am writing to thank you for your leadership on climate change policy and to encourage the California Air Resources Board to support public health by establishing the most ambitious regional greenhouse gas reduction targets possible under SB375. 　

Establishing strong targets will clearly signal the need for a departure from business as usual sprawl and support more sustainable communities throughout California where residents have healthier, physically active walking, biking or transit alternatives to driving. 　

Improving California's land use and transportation planning processes to reduce our dependency on driving offers a wide range of benefits to our communities. Along with reducing our ongoing air pollution-related public health crisis and cutting our contributions to climate change, promoting opportunities for daily physical activity will reduce the burdens faced by our children, the elderly and others living with chronic illnesses like asthma, obesity, diabetes and depression.　

Please continue to support public health by establishing strong regional greenhouse gas targets.
