Affiliation:

Subject: Electric vehicle production

Comment:

Hello Mary,

Please seriously consider strengthening the zero emission program when you meet in 2 weeks. I and my family are hoping for a pollution fee and petroleum free future. Requiring automobile manufacturers to build electric vehicles will lead us toward that goal. Please don't set us back another 10 years again. When you vote on March 27 please set the target at a high number of zero emission electric vehicles to encourage innovation, experimentation and production.

Thank you,

Tom Coddington

Subject: Zero Emission Vehicles
Comment:

To whom it may concern -

I am writing this letter to let you know that I am concerned with topic of zero emission vehicles that will be discussed shortly. I am by no means "Mr. Green" but I do think it is time to display leadership on this important issue. I know there are many sides to the story, but my hope is that your committee will show leadership in helping our car makers become more responsible and produce cleaner vehicles.

I hope one day I can tell my 2 year old son that we once had vehicles that ran on fossil fuels, but because of the leadership and action taken in 2008, we took a stand to force industry to step up and make it happen.

We all know that this is what is needed as industry's will not do it themselves.....know that our future and our childrens future is highly impacted on the decision you make.

Thanks for your consideration and taking the time to review this note.

Sincerely,

Chris Platanos

Subject: Making the ZEV Mandate effective

Comment:

The ZEV mandate has failed in its original promise to make available significant numbers of zero emission vehicles to California consumers in a timely manner. Instead we have a few lucky people (like me) who have been able to acquire all electric vehicles for personal use, many unhappy consumers who were forced

to give back their EVs, and the rest of California watching the mirage of fuel cell vehicles disappear as deadlines for manufacturing approach. How many EVs or PHEVs would currently be on the market today, if the alternate path had not been established.

Knowing what we know now about climate change, the failure of fuel cells and the development of Li-Ion batteries, CARB should never have set up the alternate path which effectively killed the momentum of EV development.

The future of transportation is electric, and plug-in vehicles are our fastest and cheapest way to get there. Please, get the ZEV mandate back on track. CARB must not weaken the ZEV mandate AGAIN by giving automakers more time to squander.

Subject: ZEV mandates and revisions
Comment:

Hello,

Please vote AGAINST any revision to the ZEV program that waters down mandates for producing electric cars. Anyone who takes global warming, national security and the economy seriously knows that we must electrify our personal transportation. California, especially, must lead the way -- because our electricity is relatively clean. While I know your philosophy is not to pick a winner in the alt-fuel/vehicle market, prudence nevertheless dictates that you prioritize likelihoods, and battery-electric vehicles (optionally plugin hybrids) clearly have the most going for them -- as any competent research staff should be able to verify.

So please do not blow it again and end up as one of the villains in yet another movie, a few years down the line.

Thank you

Subject: Plug-in Zero Emissions vehicles are here.
Comment:

To Whom it May Concern,

Please note my zealous appeal to all who can re-instate the "all electric vehicle" into our lives before it is too late.

I have asked most everyone I know how they would react to changing their speed of transportation, for the chance to save our planet from diasater.The overwhelming response is that all of the friends and family I asked are willing to make the necessary changes in their lifestyle, if the goverment and big business would support the "plug in vehicle".

I saw the film: "Who Killed The Electric Car" at the San Francisco fim festival a year and a half ago. An auto was shown that can go 350 miles between rechargings and travels 85 MPH. A new battery system has improved the performance of these vehicles considerably.

Please inform our Governor of our "emergency need" to inform the public of this problem, and the solution that is well within our grasp,if we could get the cooperation of those in positions of power concerning this aspect of our economy.

Thank you for your attention in this soon to be life threatening matter for all of us and those who follow.

Most Sincerely,

Sharon Shea

Subject: zero emission vehicle regulation

Comment:

Zero emissions? How many ways have shot ourselves in the foot regarding this issue? I see auto makers advertise about how how "green" they are, and yet I'm sure they will continue to postpone or, if possible, kill any meaningful legislation requiring them to adapt to the dwindling oil supply, not to mention the amount of CO2 their cars add to the atmosphere.

In the near future I will be installing solar collectors on my house. I would dearly love to be able to purchase a car for less than \$60,000 and can go farther than 200 miles on a charge at a speed greater than 25mph. I'm sure this can be done.

With less oil at higher prices and an environmental disaster looming, I wish the auto makers could do this on their own. Their sincere effort toward developing a somewhat environmentally friendly product would be better for us and those who follow us.

Subject: mandating electric vehicles

Comment:

Of course change is difficult but if we north americans don't get on with electric cars, our auto industry's decline will accelerate as it ignores the importance of getting off oil. This has happened over the years as Europeans and Asians are ahead of us in heeding the certainty of economics while we have pandered to the oil and auto manufacturers who have led us down the bigger-is-better path.

For the survival of the planet and the people give us the leadership we need. GM et al can do it but won't unless it is legislated and to their long term peril.

New and better jobs will be developed but industry needs to be pushed harder, Please!

Subject: MAKE NO AMENDMENTS!

Comment:

I support the agenda to reduce greenhouse gas emissions 25% by 2020.

The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles.

With global warming looming on the horizon we need firm action to save the planet,we cannot put this off any longer.Please do not make any amendments to the zero emissions laws in california,thats going backwards,and we need stricter fuel efficiency standards and emissions standards not less.If we keep backtracking like this with redidculous counter productive legislation it will be too late before we can stop this.

Subject: A mandate to produce electric cars for our survival
Comment:

Let,s, for a change, tell the oil industry and their Government bedfellows what we really think of them by getting the slack big 3 to once again start producing EVs by law.. We the people want it and they know it, but you have to kick those morons in the butt to get them to do what is right for the nation and the invironment!! I,m sure they would let things go on as they are until the whole country goes under as would our "so called" leaders in washington.. It,s time somebody stands up for us and our world and shouts, we,ve had enough of you robbing us so thatwe cannot even live a frugal life!! The old saying, "Live simply so others can simply live" is a foreign concept to the corrupt and greedy in the oil and auto indusdries and those that support them in our govt. .. Now, let,s take this opportunity to send a message to them that the EVs will once again be produced as well as an infrastructure to support it.. Now, for a change, that makes real sense!!!

Subject: Upcoming Public Hearing
Comment:

Dear Members of the CA Air Resources Board,

An important decision is to be made soon re: the electric car. Please keep the wording of this legislation strong. Do NOT let the public down as you did before.

If California's original legislation in regard to the EV had been enacted, several things would be different in our state and nation:

- 1) There would now be millions of electric cars on our roads today and the price of those vehicles would be more affordable.
- 2) There would be far less air pollution in our skies and our citizens' lungs.
- 3) The nation would obviously be using less oil and gas and would be well on its way towards freeing ourselves from our slavish dependence upon foreign and all other sources of oil.

Urgently, Paul Larkin

Subject: The importance of the ZEV Mandate

Comment:

California has a history of being in the position of setting policy trends for the rest of the country. With \$4 per gallon gasoline prices and no viable new oil resources in sight, it is now more vital than ever that California set the pace of alternatively fueled vehicle development.

For far too long, the big automakers have had a stranglehold on California consumers and the CARB board. Enough is enough. California and the public at large need alternative vehicle choices in order to continue to be economically viable into the next decade. If California doesn't take the lead, someone else will and it will be our shameful loss if we once again let the big automakes water down alternative vehicle mandates to the point at which they are meaningless.

Please keep the ZEV limits in place.

Subject: 2008 Amendments to the California ZEV Regulation
Comment:

I urge CARB to maintain its existing mandate of requiring auto manufacturers to supply ZEVs in California. Please DO NOT reduce your prior requirements. Do not allow the manufacturers to weasel out of their prior commitments. The technology for ZEVs, in the form of battery electric vehicles, is available here and now. All you need to do is demand that the vehicles be delivered to the California consumers who have been begging for them for years.

Hydrogen Fuel Cells are a myth. They will never become a commercial reality. The promise of FCVs far in the elusive future is an unacceptable substitute for solutions that are available here and now.

The most practical solution to our air quality and global warming issues are Plug-in Hybrid Vehicles. CARB should add such vehicles to its mandate, without reducing the requirement for ZEV vehicles.

Sincerely,
Elan Caspi

Subject: dont believe automaker lies

Comment:

We have heard it so often: "we cant build zero emission cars because nobody wants them" or "because they cost too much".

Lies, lies lies.

This is another huge opportunity to stop killing soldiers for oil just so we won't have to invest in electric cars.

Electric cars/ZEVs = local economy investment.

Not doing it = sending more \$ to the terrorists. (they have a trickle down economy too)

Will you miss this opportunity again?

Subject: Call for Clean Air

Comment:

With most of the world's current power supply coming from coal and other fossil fuels, we need a transition to clean, renewable energy sources that will protect the world's health, environment and quality of life. A commitment to clean energy would reduce pollution, create millions of high tech jobs, diversify our energy sources, add to global energy security and save billions of dollars. A much-needed transition to solar, wind power and other renewable energy in every region of the world holds the promise of a better future for us, our children and future generations.

Subject: More Mandated ZEV's Please

Comment:

Hello,

As a Canadian I have little influence on CARB policy and it is not my place to tell Californians what to do. That said I think a strong ZEV policy in California will have a great ripple effect to the rest of North America and I hope CARB can look past the interests of the auto industry and think about future generations when it makes a hopefully strong commitment to increasing the number of ZEV on the road and in sales rooms.

Sincerely,

Jeremy Toth

Calgary, AB, Canada

Subject: California, Please Help Our Country

Comment:

On March 27, you will revise the history-making program that put more than 5,000 Zero Emission Vehicles (ZEVs) on the road.

Please do not diminish this legislation for the benefit of wealthy and powerful special interests. More electric vehicles will benefit EVERYONE. Fewer vehicles is a BAD choice for the country.

I am a school teacher and very much would like to drive a fully electric vehicle. Reducing the number of ZEV's manufactures must make creates a market with cars only the ultra wealthy can afford. This does not help gauge the demand from common consumers or begin to make the changes our environment needs.

Please do not vote to benefit the few, wealthy, influential over the rest of the state and country.

Cynthia Kessel

Subject: ZEV legislation

Comment:

Dear Ms. Nichols. It is my understanding that a vote is upcoming on a regulation to weaken the requirement to force auto manufacturers to provide 250000 ZEV's in California by 2014. I am writing to urge you to strengthen, not weaken this legislation. I am convinced that despite the weakening economic outlook and their poor financial performance, the auto manufacturers can and will respond to the leadership CARB, and the State of California will provide. As Canadians, we watch California closely as much that you do is directly reflected in the policies of our various Governments - particularly here in British Columbia. This is an opportunity for CARB to demonstrate leadership in California, and to much of the rest of the world in a way that will improve the lives of millions around the world. Please do not weaken this important legislation.

Subject: Support electric cars!

Comment:

I support the current requirements of number of electric vehicles auto companies will be made to provide.

ZEVs are a crucial step towards keeping California's air clean, and taking that step is very resonable.

The big car companies have shown in the past that they can make these vechiles, and if the big companies refuse to comply, there are several small companies, like Miles, Aptera and Tesla, who are going to have ZEV's on the market in California by next year.

Please uphold these requirements for a better and cleaner future.

Subject: the California public needs and wants electric cars

Comment:

We need as many electric cars as possible. There is no reason to place a limit on their manufacture and sales. Climate change, global warming and world oil depletion demands us residents of this globe to wake up and find solutions. The electric car is one solution.

Don't worry about draining the electric grid, soon solar panels in distributed or home-based sources will supply what the EV owner needs.

California has always been a leader. Let's not lose our edge. We can still lead the other states in finding solutions.

Subject: We want electric cars!!!

Comment:

Dear California EPA Air Resources Board,

Please vote in favor of legislation that encourages or even mandates the introduction electric cars in California. With gas prices rising and global climate change taking place, electric cars are one of the only realistic options for a scalable solution (unlike hydrogen, biodeisel, or clean diesel). Plugging an electric car into a solar electric system (PV) creates a truly sustainable solution and we need to encourage car companies to introduce these cars now. The technology is already there, there are many electric cars already on the roads, but we need to make sure car companies provide these options to consumers now rather than benefiting from the high gas prices and squeezing consumers' pocketbooks while withholding better technology. Thank you.

Jenean Smith

Subject: Please do cut back ZEV mandates again!
Comment:

Dear Sirs and Madam,

Once before you cut back on ZEV mandates, based on car manufacturers promising that hydrogen vehicles would eventually fill the gap. Now many years later car manufacturers admit that hydrogen will take additional decades -- if ever. You need to stop accepting manufacturers excuses in America -- while the same companies are selling much cleaner cars in Europe. You need to stop the backsliding on the part of ARB that led to the destruction of the EV-1 and the cancellation of the RAV4-EV -- highly successful vehicles designed 20 years ago. ZEV vehicles are possible using today's technology especially with the new lithium ion batteries. But someone needs to take a stand against global warming. And that someone HAS to be the ARB -- THERE IS NO ONE ELSE IN ANY POSITION TO DO ANYTHING ABOUT THIS ISSUE! Either ARB stands up on their hind legs and says "enough already, SOMEONE has to stand up against global warming and makes some effort to save the planet that our children NEED to live on!" Or else: Game Over.

Subject: I want an affordable electric car!

Comment:

My mother Patty Hilligoss was on your board! She is dead now but would be surprised if you let the car manufacturers off the hook so easily! Please force them to continue working on the electric car! Your governer and the rich can buy them, it's time the average person should be able to buy one. The last time you let the auto manufacturers off they proceeded to crush the ev1's, which were loved by their owners. There is a place for the electric car, it may not be good for long distance trips but works well for short, around town commutes!

Subject: HYDROGEN?????

Comment:

Please -who are you fooling.Thats like not doing anything.The electric car is the way to go yet your prompting a technology that will nto be ready for at least 15 years.Also based on the unstable nature of HYDROGEN you would be lucky to get any insurance.

That route is a joke at best.You have electricty everywhere and you can do that now-why are you prompting this way-to insure your job security.

Shame on you and the board!!!!

Subject: ZEV percentages
Comment:

Please do not sacrifice the health, and financial well being of our population that a higher amount of electric vehicles on our roads can provide. Please don't give in to the special interests groups claims. We all know that they produced a limited number of cars a decade ago with decade old technology. With the innovations in battery design, now is the time to make them tow the line.

Incidentally, did you know that GM transformed from an auto manufacture to war materials in 1941 in only 1 year? I can't understand claims that GM execs. make that "it takes years to retool". That's what I heard from GM in regards to the Chery Volt.

Please do the right thing now, we don't have the luxury of time.

Thanks for your time.

Sincerely,

Rob Wiebell

Subject: Electric Car quota

Comment:

I urge the Board to NOT reduce the number of zero emission vehicles required to be manufactured and sold to California residents. Plug-in Hybrid vehicles should NOT be included as zero emission vehicles for purposes of the minimum number manufacturers are required to provide.

For decades California has been a leader in reduction in air pollution. Now is not the time to relax regulations or slack off from pushing technological advances in emission reduction.

Subject: ZEV - We are counting on your strength!

Comment:

We are counting on California to lead the way, as they have done in other progressive areas. Our children are depending on you! Please know the entire United States is closely watching the choices you make... including us here in Iowa. Please put people before profits of energy companies. Hydrogen fueling stations are not going to be across the state of Iowa in any near future, but everyone has a plug in their home.

I have seen the film "Who killed the Electric Car" and hope that all in the decision making process have. This is your chance to shine - to be brave, turn the page, and take the USA forward to a cleaner and more promising future. Reconsider the evidence and make a policy you can be proud of. Time is running out to deny our responsibilities to the earth and future generations.

Subject: ZEV's
Comment:

Please, please, please don't weaken the Zero Emission Vehicle status!!! The only way to fix CO2 emission, global warming, and our reliance on petroleum products (and therefore foreign oil) is to change our fuel source! ZEVs are a large step in the right direction. Much electricity being generated now is with renewable sources, ie: wind, hydro. CLEAN!
Please let us show the world that we can be leaders in doing the right thing. Let's leave an inhabitable planet, intact, for our children!
Let's get out from under the oil industry's thumb, and make the right choices, however hard.
Thank you!
Michael Doan, RN, CCRN

Subject: Don't make the same mistake twice!

Comment:

We lived in San Carlos, California from 1968 to 1972. The air pollution got so bad we couldn't see across the Bay at times. California has been a leader in many actions that have been adopted across the nation. You have an opportunity to once again bring the state into the forefront by not only reducing pollution but reducing our dependence on gasoline.

You can do that by recommending to Gov. Schwarzenegger a strong program that will put thousands of Zero Emission Vehicles (ZEV's) to use. Electric cars now have the range to satisfy the driving needs of a majority of people, especially in cities. There is a demand for these vehicles and the auto companies can produce them more economically in higher volumes. Don't make the mistake you made earlier in killing the electric car. Such vehicles can make a real difference in improving the economy and environment of our entire country for the future.

Sincerely,

Comment:

We can not afford for this agency to get in the way of bringing the Electric car to the Marketplace. I will fight any attempt to slow down the process. I know OIL companies have vast resources to slow down the evolution but we will not stand by and let this happen.

We do not want to see restrictions that result in profits to oil companies, their affiliates, subsidiaries, etc. for instance exxon has a patent pending on battery types, etc. I NEVER want to see these batteries mandated in anyway, shape, or form.

Companies like Exxon, Big Three Auto makers want to lease us Electric Cars, they want to control us. WE DO NOT WANT TO BE CONTROLLED BY THEM. WE WANT COMPETITION AMONGST EV CAR MAKERS. WE WANT TO OWN OUR EV CARS WITHOUT ROYALTY PAYMENTS_ IF WE HAVE TO MAKE THEM IN OUR BACKYARD THIS WILL HAPPEN!!!!!!!

PLEASE BE PART OF THE SOLUTION NOT PART OF THE PROBLEM.

Comment:

Dear CARB members
Many of us here in British Columbia have been using EV's for a long time.
Our goal, through education has been to try and get consumers to accept EV's.
Most consumers do not want to have to convert a vehicle but would be willing to own one if they were an off the shelf product. We have seen the death of a perfectly viable set of electric vehicle already and would be totally dissapointed if you do not show leadership at this point. Even your president has finally come on board, at least in voice.
Please stand by the current requirements for the auto industry.
Sincerely
Gary Blidook

Subject: Save the Electric Car

Comment:

Reinstating the manufacturing of the electric car would help clean up our environment and get us off foreign oil. It's critical that this car is allowed to be manufactured and used in our country. It's way past time that the car companies to restart the manufacturing and distribution of this vehicle.

In all of the testing the these vehicles have proven efficient and economical. And, with the price of gasoline going through the roof many people can't afford gas-powered cars anymore. It's way past time for this to take place. Something has to be done, and this could be a large part of the answer.

Subject: Zero Emission Vehicle Regulation Decision

Comment:

Dear Board Members,

I urge you to not reduce the compliance standards by the major automakers again at your upcoming meeting. We need you to stick to or require improvements to their offerings of low emission vehicles for our market. It is clear that these vehicles are can be made based on past EV vehicle programs, current hybrid technology that can be applied to new ZEV's and the number of new electric vehicles that are being produced by start up manufacturers.

The geo-political, and environmental state of the world requires that California once again take a leadership role in bringing the required change to the automobile market.

Regarding solutions hydrogen is not a realistic option. Let's support progressive technologies that are here today - plug-in hybrids powered by microgeneration from renewables.

Thank you for your consideration.

James Hanusa

Subject: Zero Emission Vehicle Regulation

Comment:

At this time in our history, we as citizens of the USA and the World, are all confronted with the consequences of our inactions on this important topic. In order to move beyond the status quo, we'll need to muster all of our personal and political will to do what's right for the environment, and for our children. Sadly, it's they who will pay the highest price for our inaction.

CARB should press for effective legislation to defend the air quality and health of California with every tool at their disposal. Given it's failures in the past, isn't it time for CARB to press the auto industry for the largest number of Zero Emission Vehicles in the upcoming legislation?

As a citizen, resident and voter in California, I want to assure you that I will paying very close attention to how CARB handles this next round of "negotiations," and expect to vigorously support those who seek to move us forward into a new age of Green personal transportation.

Maybe someday in the future, when our children look back on the actions that CARB took this time, they will say "Thank God they had the courage and foresight to stand up to the entrenched special interests, and do what was right for the environment, our economy and the auto-driving world at large."

Comment:

The technology is there.

The automakers have done it before.
They can do it again.
They have to do it again.

I'm driving a 1999 Ford Ranger EV, one of the cars that survive
the systematic destruction of the EV from the first ZEV mandate.

Michel Laverdure
Proud EV owner & driver
My CO2 emissions have been reduce by 3 Metric tons/year.
A 24.6 % reduction, compare to the average emission per capita in
my province(Quebec, Canada)

Form Letter 170 for Comment 97 for ZEV 2008 (zev2008) - 45 Day.

First Name: Randall
Last Name: Bohanon
Email Address: randall.bohanon@gmail.com
Affiliation: California RN

Subject: PLEASE ADOPT THE ZEV MANDATE
Comment:

The Zero Emission Vehicle (ZEV) is what is right for California. I was born and raised in the San Joaquin Valley and now after a long career in the military I wanted to retire there, but the air quality has gotten so bad I am forced to look elsewhere. The ZEV technology is available now. Please adopt the ZEV mandate.

It needs to be law because the the oil and automotive industries don't hold the best interests of the people of californian. They are obstructing progress towards cleaner air and reduced dependency on oil. They fear the change because they will loose much of their power.

I am sure the benefits of ZEV will far outweigh any trumped up financial crises that the oil and automotive industry has presented. The California governement could save millions annually if all the state vehicles were ZEV. The money people save from not having to buy gas can be invested elsewhere. If you are worried about loosing gas tax revenue, I would be happy to make up for the loss in other taxable ways - increased automotive registration fees for example.

I trust you will do the right thing.
Sincerely,
Randall B. Bohanon RN, CNOR

Subject: Electric Vehicle consideration
Comment:

Members of the Board,

I hope that you have seen the movie "Who Killed the Electric Car". I have and am extremely disappointed in your previous Board's actions. That was a number of years ago and this Board has the opportunity to rectify what I and many others consider a serious breach of public trust.

I am certain that all of you understand your mission. As a long range planning and policy setting organization it is important for your Board to consider your mission in the context of long range and far reaching effects. While it may be in the short term interest of some to place more weight on economics, in the long run if the State is unsafe to inhabit or it is out of position to include electrical vehicle alternatives for transportation then your Board has done a great disservice to our citizens.

Your Board has the ability to effect significant change and public good. Please vote for what you think is the best thing for all of us, our children and grandchildren.

Thank you for your consideration,

Clark Beattie

Comment:

California continues to lead the nation and the world toward a future of peace and prosperity. Our future generations deserve nothing less. Plug-in hybrids and all electric vehicles that were destroyed by our faltering auto industry was a travesty that has cost this country and the world dearly by delaying the movement away from our oil dependancy and toward further more unhealthy air, greenhouse gases emissions, and a perennial war for oil in Iraq costing countless lives and trillions of dollars. Please allow California the opportunity to do what it does best- lead the world toward sanity.

Comment:

Fully electric, plug-in electric cars may not be the entire solution to our resource use and environmental degradation problems, but they would be a significant step in a very positive direction, since it is much easier to control - and change - resource use and other environmental impact issues at a greatly reduced number of sources. That is, at several dozen or several hundred power plants instead of several million private vehicles. Considering the urgency of the need for significant progress towards lowered emissions and renewable, sustainable, environmentally responsible energy sources, and the tremendous potential for creating hundred of thousands of jobs in new, 21st century industries, the opportunity represented by development of a domestic electric car industry, and the other industries that go with it, failing to pursue the opportunity is nothing short of a crime.

Comment:

Please do not weaken the Zero Emission Vehicle Regulation. With Gas prices at at \$4, now is the time to lead the country out of its' oil addiction. True green technology is the key to our economic and environmental future. If anything, toughen the legislation. The futre generations will be indebted.

Subject: Keep ZEV Strong!!!

Comment:

Keep the ZEV program strong. Help push America forward by demanding cars that don't produce green house gases and that don't give us dependence on substances from foreign countries that can use the money to do our country harm. There is no logical reason to demand any less from Americans. Demand more and you will see more from us as innovators and producers of technology for the future.

Subject: Make the electric engine part of ZEV 2008

Comment:

Although the electric motor and its affiliated battery technology are not advanced enough to take over from the internal combustion engine, they must be a part of the solution to dirty air and dwindling fossil fuels. Please reinstate battery electric vehicle technology as part of CARB's recommendation for improving the air we Californians breathe. The real-life experience of expanding the use of the Tesla roadster, the GEM car, and other vehicles will lead to vehicles that hold a charge longer, longer battery ranges, and cleaner air.

Subject: Protect Zero Emissions Vehicles

Comment:

Dear Board,

I urge you to uphold the legal rights of California and 10 other states to regulate the availability of zero emission vehicles in an attempt to show that pollution from vehicles can be reduced by using the available and feasible technology of Battery Electric Vehicles and requiring the manufacturers to offer these vehicles for sale to the many interested consumers who want to help reduce the Oil Addiction of the United States, in addition to becoming part of the solution instead of the problem of ever increasing pollution by vehicular transportation.

I expect that you make good on the mistake that CARB made several years earlier by killing the ZEV mandate, which resulted in a throw back of many years in vehicle technology, allowing Toyota to become the number one manufacturer of clean vehicles as well as a reduction in available ZEV vehicles to the many interested buyers.

I urge you to pass the ZEV mandate without weakening, this is the only way that the USA is going to make headway in clean vehicular technology on a broad front.

My children thank you,

Kind regards,
Cor van de Water
Sunnyvale, CA.

Subject: Please do not weaken the Zero Emissions Act

Comment:

Dear CARB:

I am writing to urge you not to give in to pressure to form the automotive companies to dilute California's commitment to Zero Emissions. I just heard a report on the rapid increase in coal fired power plants in China, which exceeded all projections, resulting in China surpassing the USA as the world's biggest CO2 polluter. We must do everything in our power to clean up emissions asap in our country, to show leadership in the world and help to couterbalance what's spiralling out of control now in China. Please hold the auto companies to their original commitments of electric vehicles.

Subject: Make ZEV the way of the future
Comment:

Please keep ZEV Regulation alive. ZEV is the way to go.
"California succeeded in getting thousands of cars on their streets (leased not sold), but then when ARB gutted the ZEV mandate in 2003 all the automakers took their electric cars back and crushed them. Signifying the biggest idiot move by ARB that they have ever done. Those cars, one of them being the EV1 by General Motors, traveled well over 100 miles on a charge. The EV1 having the distinction of being the best vehicle GM ever made. An electric vehicle designed to be so from the ground up, it could get 160 miles on a charge with its NiMH battery pack. The RAV4 EV, a conversion of the RAV4 gasoline car, made to comply with the ZEV mandate could get 130 miles to a charge on Panasonic NiMH batteries. Batteries that were in essence 1990s technology. Panasonic had announced in 2003, or thereabouts, that it had made a 30% reduction in weight and increased the energy density of its NiMH batteries which would have given it something like 170 miles range, and if those batteries were to be used in the true EV the EV1, its range would have been somewhere around 208 miles per charge."

ZEV is the way of the future.

Lucson Pierre-Charles
Maryland

Comment:

As a hybrid owner I love the fact that my gas bill, especially as gas prices are reaching \$4.00 per gallon, is a fraction of what it was when I owned a gas powered vehicle. Now, I am looking forward to a ZEV. The Air Resources Board's attempt to compel clean cars in the 1990's was a great idea then and it should be picked up and reinstated now. We have lost valuable time, but it is not too late if you do the right thing by picking up ZEV ball again and run with it rather than dropping it this time.

Comment:

Reduce greenhouse gas emissions 25% by 2020.

The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs).

Require the full 25,000 ZEVs that automakers had promised for 2012-2014.

Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Choice for consumers means cleaner air for everyone.

Comment:

I urge the California Air Resources Board to reject its staff proposal that, instead of propelling our country ahead toward a pollution-free future, will profoundly weaken the program once again by requiring automakers to produce only about 150 ZEVs each per year through 2015—which amounts to less than what these influential regulators mandated in 2003.

The board should instead pursue a stronger proposal that would put more ZEVs on the roads in order to move California toward a cleaner and greener future.

Comment:

I know you wish to weaken the program to put more Zero Emission Vehicles on the road. You want to require automakers to produce only about 150 ZEV's each year through 2015. Consumers should have a choice in whether they buy a ZEV or not. It is not fair to encourage air pollution and to have a "do nothing" attitude as you do. We must do our share to combat global warming. Otherwise, we can import ZEV's from other countries.

Wake up and do the right thing, not just for Californians and California, but for the United States of America.

Comment:

Please do not weaken or postpone the mandate to reduce global warming. I sincerely hope that your proposed amendments to the ZEV regulations will continue to support electric cars as well as other non gasoline, non diesel, and non fossil fuel vehicles.

We do not have time to put off our curbing of fossil fuel vehicles. Even with an economic downturn, we still need to take action, not postpone it. I am most concerned about what I see as the weakening of the law in some of your proposed amendments. Resist the temptation and the pressure by large fossil fuel companies. Please show backbone and leadership, and stand up for our society's real needs to switch to alternative energy. Electric cars, for esample, cause far less pollution that diesel or gasoline powered vehicles.

Hopefully,

Linda Judd

Subject: Please let electric cars flourish, nay, mandate it!
Comment:

I really can't believe that CARB is thinking about more anti-electric car decisions. It was a bad move the first time, as it made it impossible for people to buy electric cars. I personally would never lease a car, but I would have bought an electric. Most people didn't even know (and still wouldn't if not for Who Killed the Electric Car) there were electric cars available.

It's a worse decision now as we are getting to a bad point in both politics and war as well as the environment. We don't have anywhere near enough time to switch over to electric vehicles unless it is mandated in part by you at CARB. Please stand up against the major auto companies on this. In a sense, CARB made the EV1 and others exist, please don't ruin their chances a 2nd time. If there is any way to do it, please make statements in favor of electrics, and if need be, PHEVs.

Thanks for your time and concern on this very important matter.

Each year for the past 7 we vacation in Indio for two months.

This year, in particular, I was disappointed to see the growing number of huge SUV's around the Costcos, Ralphs, and WalMarts around Coachella Valley- with running board/ladders to climb up into them.

The "in" vehicle now seems to be Black, Huge, tinted-windowed, 5+ litre V-8 engined -with vicious-looking 18 to 20" chrome wheels that could have come off Charleton Heston's war chariot in Ben Hur!

It was like a bad dream to think that this "fashion" could prevail with gas prices over \$3.60/gallon?

Talk about over-consumption!!!

I hope you won't be offended by comments from a visiting Canadian -and I'm not meaning to interfere - but let's get real!

Subject: Don't kill the electric car again!
Comment:

I was outraged by the California Air Resources Board (CARB) decision to eliminate battery electric vehicle technology in 2004. Is it irresponsible that CARB staff have recommended to the Board that hydrogen technology, again, be treated with more credits and funding for automakers than battery electric vehicle technology. What this has led to in the past is investment in hydrogen technology, which is less efficient, mostly is derived from fossil fuels and, by its proponents, is labeled as "far off" in even small-scale implementation.

We need a solution NOW. Battery electric cars have been on the road and continue to serve thousands of drivers daily. We need to give automakers an incentive and push to invest in this PROVEN technology - and YOU must do this NOW.

There really is no reason to reduce the number of ZEV that automakers should be required to produce by 2014. The old excuse was that there simply wasn't enough interest in PHEV or ZEV. But here I am, in Kentucky, writing you, in California, pleading for you the lead the way in finally promoting the kind of car that consumers like me are desperate for, the kind of car the world is desperate for. Gas will be \$4.00 a gallon here by this summer. Now, which car do you think I would buy given the choice: another gas-dependant car, or an EV that never needs gas, that I could actually run from power from solar panels? America wants EVs and ZEVs and PHEVs. Now, please.

Don't kill it again....

I'm so tired. Choices that should be obvious are pondered as though the flip side has merit. But it is never about merit, it is always about corporate greed and supporting the corporations at all costs. Now the Board members entrusted to protect our environment are pondering whether or not to strongly support zero emission vehicles. The California Air Resources Board is actually considering weakening such legislation to make it "easier" on the auto makers. Is there no more goodness left in this world? Is there no one left who will perform the duties of the job rather than do the bidding of corporate executives and the wealthy elite? Is CARB just another obsequious corporate puppet? I'm so tired of living in a world where no one cares enough to make the RIGHT decisions any more.

Please consider the adoption of amendments to the California Zero Emission Vehicle Regulation.

We need to move on this in a positive direction and move quickly. It is imperative that the U.S. be a leader and California can be first.

Subject: ZEV

Comment:

It is imperative that we increase, not decrease, our speed of movement to alternative cars. With global warming, major risk of losing middle eastern oil, and the resistance of the special interest groups, we have got to be firm in fulfilling the ZEV mandate as proposed originally, not a watered down version. I urge CARB to stand firm in this regard.

Subject: ZEV should have your support.
Comment:

Dear CARB:

Your very purpose for being is to ensure we have alternatives to petroleum based vehicles to clean the air in our heavily polluted state.

By passing your proposed reduction amendments to ZEV, you negate the reason for your existence. This doesn't make much sense. We are not a stupid public. We can read and figure out things about lobby, pressure from federal sources, and it's shameful that CARB cannot stand for what it's supposed to be all about...California has the fifth largest economy in the world, and it's time to act like it.

Sincerely,

Randy Springer
Glendale, CA

And a registered voter.

Comment:

Please maintain the highest possible standards in mandating ZEVs. California has long set the standard for the future in automotive design. I hope such leadership will continue. Strict guidelines will provide a firm basis for companies to invest in plug-in hybrid and all-electric vehicles. This will be necessary to control California's air quality issues as the state continues to grow.

Comment:

The amount of products that need petroleum is scary. Just one step to create a source that is not completely dependent would a great option. I for one, WANT a electric car. I think it is a worth while agenda. So any attempt to make strives for that goal, I am for it. With California behind this amendment would help make the electric car and other high efficient cars more affordable for us middle class. Please no more hybrids. These are great cars but it is step backwards. By adding more moving parts is not a solution. It is a bandaid. Thank you for listening. I know you care.

Charlie

Comment:

Hello,

I am an advocate of electric vehicles and clean transportation. I was disappointed and surprised to read that CARB is considering reducing their zero emissions vehicles mandate for 2012-2014.

Our nation is just now realizing how much we need to move to cleaner forms of energy. Car manufacturers won't implement these changes by themselves; groups like CARB are required to initiate and require change.

Please, work to accelerate plug-in hybrid and battery electric vehicle production; don't delay it.

Subject: restore the ZEV quota, not scale back

Comment:

Zero Emission Vehicles have been proven safe and practical during the 90's and should not have been taken off the market.

The use of electric cars is as old as the car itself, and use of gasoline engines only happened after the 1920's and constituted a monopoly of sorts.

Battery technology has improved to the extent that zevs will become even more practical, and if clean and renewable (solar and wind)generating of electricity takes place, these vehicles will contribute the most to reducing greenhouse gases.

Please do not scale back the number of zevs on the market and on the roads! Move the state forward, not back to a sick and smoggy past!

Subject: Re: Renewal of Zero Emission Vehicle (ZEV) Program
Comment:

To whom it concerns,
For reasons pertaining to global warming, air pollution, national security, California research and jobs, please do NOT weaken or eliminate the Zero Emission Vehicle Program. The success of hybrids in the marketplace, especially in CA, show that there is a real market for reliable green technology. The ZEV program encourages the research and investment necessary to keep this technology going forward. If we do not keep this pressure on, we lose the research & the associated intellectual property, jobs, and of course income.

The air pollution is self-explanatory, as is the global warming.

Sincerely
Harry

I have made many changes in the past few years to conserve gas. This change is not easy. It took two years to implement by changing work to the community where I live, stop all unnecessary driving, setting thermostat much lower, and purchasing alternate energy technology. If it took one individual several years, how many would it take the state? Immediate action is required and new ways for California to raise revenues need to be addressed. Change is challenge, and the California Environmental Protection Agency will be looked upon as the leaders ready to work towards a cleaner future.

Subject: Zero Emission Vehicle Regulation

Comment:

Please do not back down on the requirement to produce zero emission vehicles. That option is the best one for most vehicle trips in California and would reduce pollution tremendously. The last time CARB backed down, GM recalled working electric vehicles that would have provided a tremendous boost to the industry. Keep the automakers on track to produce more electric vehicles, not fewer.

Subject: ZEV Mandate

Comment:

You must strengthen the zero emission vehicle program! If the health of your citizens is not enough for you to do it, then consider the cost of this decision for everyone. Crude oil is soaring above \$100 a barrel and along with that so are gas prices!

With the threat of recession, spending money on fuel could be the straw which breaks the proverbial camels back. If people were to use electricity as a fuel source, it would be equivalent to paying 60 cents a gallon! Verses the all to real threat of four dollars a gallon this summer or more! Please, strengthen the zero emissions vehicle program! Get the auto makers to plug-in! The future of our country depends on it!

Subject: Hold Automakers to their Zero Emission Vehicle Promise

Comment:

Please vote to hold the automakers to their promise to produce 25,000 Zero Emission Vehicles between 2012 - 2014 and 50,000 between 2015 - 2017.

The world oil crisis, which has spurred multiple wars as well as created sudden hardship for families as oil prices skyrocket, together with the increasing certainty of global warming, all indicate how critical it is that we have as many Zero Emission Vehicles on the roads as soon as possible.

Please hold the automakers to their promise.

Thank you.

Sincerely,
Coleen Borrego

Subject: ZEV2008 -- Do Not Weaken

Comment:

Now as the effect of greenhouse emissions is widely comprehended, California has both the opportunity and obligation to lead in strong actions to reduce these emissions. It is imperative that California emission regulations not be weakened, but even to be strengthened.

In resisting any objections on the part of auto manufacturers, it would be well to remember that had manufacturers been held in previous years to strong efficiency and pollution regulations, the American auto industry would today be competitive and strong around the world.

Subject: zero emissions, now

Comment:

As I write this gas prices are going through the roof. The country is in a recession the likes of which has not been seen since the 1930s. The environment is in danger - all the scientists are saying so. There is no doubt in my mind, or in the mind of many of my fellow citizens that we need to do something now to change our dependence on gas cars.

I am a businesswoman in San Francisco, who has solar on her house. The obvious answer for me is electric cars. Let's face it, the new economy is going to be based on ENERGY and that energy is going to have to be sustainable. Let's be at the forefront of this movement! Let's be ahead of the game! We have a chance to improve the economy by kickstarting a whole new way of driving and galvanizing businesses like solar panel energy etc. Let's show the entrepreneurial spirit that has always made California unique. Please go forward with a hearty and enthusiastic mandate for a large amount of Zero emission cars. It's the only smart thing to do, especially for the economy of this state. Thank you.

Subject: 2008 Amendments to the California Zero Emission Vehicle Regulation
Comment:

Save the Electric Car

 It would meet my day-to-day travel requirements.
 Less expensive to purchase, maintain & fuel than the existing subcompact cars.
 Possibly safer - reduced risk of fires & explosions from accidents.
 Decrease my burden of increasing gasoline costs.
 Conserve fossil fuels for future generations.
 Decrease our demand of foreign oil decreasing the risk to soldiers overseas.
 Promote development of alternative electric energy technologies
 Contribute less to the destruction of the environment. It would be easier to monitor and regulate green house gases emissions from electric energy production easier than combustion automobile engines. Although the pollution from vehicles are modest in comparison to air travel one must take into account the energy consumed and the pollution emitted by oil refineries to produce fuel.
 Reduce the risk of injury and death many young men and women face in the Middle East
 Plus purchase incentives could be offered to EV owners:

- Cheaper licensing & parking fees.
- Cheaper Insurance cost.

As a disabled senior I hope to be able to purchase a North American EV rather than pay for one imported from China; we are exporting car manufacturing from Canada and the United States and imports are taking over our automotive market.

Subject: ZEV program support

Comment:

I thank CARB for listening and creating the ZEV program that has resulted in 8 years of electric vehicle driving for my family. We were driving 17k miles a year on the same EV as our only or primary vehicle. With the waning of the ZEV promise came inadequate support and I am now forced to painfully drive a depressing Internal Combustion Engine. Please keep forging forward and motivate all parties toward survival of the humans through cleaner more intelligent transportation. Not only make sure EV's are available but affordable as soon as possible. My neighbors agree that they would like to have an EV, but need them to be supported and attainable. Also plug-in ZEV capable hybrids need to be pushed hard. Hopefully alternative fueled hybrids too, including AFV PHEV's.

Thank you,

Kevin Taylor

Subject: Please do not weaken mandates for Electric Vehicle
Comment:

Sir or Madam,

In your upcoming hearings to consider changes to the ZEV Program, I urge you NOT to take actions that may decrease the number of ZEV vehicles (particularly electric plugin vehicles) on California roads in the coming years,

The motor vehicle companies have had ample time to bring efficient, electric vehicles to market. Indeed, they demonstrated the viability of mass produced electric vehicles in the late 1990s.

Our goal as Californians should be to have more ZEVs on the road. Any amendments that may decrease the total number of ZEVs making their way to consumers would be a mistake.

Respectfully,
Jeff Parker
Albany, CA

Please act positively towards this very important issue.
Whether or not Global Warming is a fact (I believe it is) or not,
why does it not make perfect sense not to go in the - what I and
many Americans believe - the right step?
Why not, you ask?
I can think of two BIG reasons, BIG auto companies and BIG oil
companies.
Sadly, GM proved how much with the absolute destruction of the
electric car a couple of decades ago when they had the technology
down pat.
It's overtime that people are what is important in this country;
not BIG companies.
Open up the fields for cleaner and natural energies with jobs and
less fuel expense!
Thanks!

Subject: electric car

Comment:

I was fortunate enough to drive an electric car in LA 15 years ago while consulting with ISE on their hybrid class 8 truck. Please do not let big business or the ferderal government threaten you into not getting what America needs. I have been sending emails to the auto manufactures asking them to work toward a true plugin car. I think that a petroleum engine backup is a good idea but should not be used until the batteries are depleted. Many of my friends and I will buy a true plugin not as a toy but to help the environment and reduce US dependance on foreign oil. Hydrogen may have some benefit but it still uses natural gas to create the hydrogen. It may not be foreign oil but IT IS the same players.
Thank-you

Subject: Zero-Emission Vehicles
Comment:

To Whom It May Concern:

I wish to express my support for plug in electric vehicles. These zero-emission vehicles, when coupled with innovative battery technology, provide a clean and cost-effective alternative to gasoline engines.

Although I live in NY State, I recognize that decreasing California's dependance on oil/gasoline will have dramatic positive impacts on the US economy, national security, foreign policy, and global environmental pollution levels, especially when other states begin to follow suit.

Please be firm about requiring timely, challenging, progressive standards by requiring electric vehicles be made available in as large a quantity and as timely a manner as reasonably possible.

Thank you,

John B. Cozzens III
2 Treehouse Lane
Queensbury, NY 12804

Affiliation:

Subject: ZEV 2008
Comment:

Please bring back the ZEV to its original intent and numbers.

Hybrids are good, but they still pollute & are very complicated.

Give Californians the option to drive completely pollution free.

Remember, the auto industry never would have added seat belts if it had not been for concerned citizens.

Battery & capacitor technology are fast approaching the range capabilities of the ICE based automobile.

If you were starting out with both technologies, which is simpler & which offers more for the future. Just think how incredibly complicated the ICE is.

We lost valuable time when the ZEV initiative was weakened in 2003.

There are many, many of us who are willing to pay more in order to bring back the fully electric vehicle.

I wanted to buy the EV1 in 2000, but was lied to by the dealers selling them. They said they were not building them anymore. There were thousands more like me.

There is absolutely no reason the car companies could not make a fully electric vehicle in the quantities that were built into the original California ZEV plan. The people are out there ready to buy.

This time around, I believe the car manufacturers will "see the light".

Thank you.

Gerald Shoudt

First Name: Colby
Last Name: Trudeau
Email Address: giantquesadilla@gmail.com
Affiliation:

Subject: Please Make the Right Descisions
Comment:

Dear Ms. Nichols and CARB:

Thank you for increasing the emissions standards over the past few years, in an effort to reduce pollution.

I urge you to approve legislations that further reduce pollution, such as those that encourage auto-makers to produce ZEVs, EVs, NGVs, and PHEVs. These vehicles are gaining in popularity, but at the moment, are not affordable to most people. If these vehicles were mass-produced, they would become cheaper, encouraging consumers to chose clean vehicles over conventional gas cars.

Please make the right decision on the 27th, and help clean up California's air!

Thank you for your time and effort,
Colby Trudeau

Comment:

Development of electric powered passenger vehicles is the most practical answer to air pollution and global warming when combined with tax incentives to produce solar energy. Plans have been around for years for producing vast amounts of solar energy in the Southern California deserts and now with the price of oil over one hundred dollars a barrel the time is right. Invest in electric storage technology for American cars, buses, and trucks! Speed up electric storage technology development; don't slow it down. We don't want the rest of the world to beat us at this game again.

Comment:

Respectfully I suggest that this is no time to cancel the production of electric cars or any other vehicle which might be carbon eliminating. We should, I strongly feel, insist that car manufacturers do everything in their power to make as many of such vehicle as they can, as soon as possible. California is historically ahead of the rest of the country when it comes to matters of innovation. Let us continue to do so.

Subject: Please Support the Electric Car with the ZEV Mandate

Comment:

The electric car is the real solution to the fuel crisis our California, the US, and the world all face today. The mandate in its current state is weak and gives far too much credit to hydrogen. Hydrogen is only one fourth as efficient as pure electricity. The increased energy requirements of hydrogen means that energy, money, and air quality will be needlessly sacrificed. California has lead the country in reducing emissions, including the original ZEV mandate of the 90s. Require the big car companies to make electric cars now! It will be much easier and less expensive to implement electric vehicles in the state of California, and then throughout the rest of the US.

Please save the electric car.

Comment:

To whom it may concern;

I urge you very strongly not to hold up progress on the deveopment of the electric vehicle in favor of the hydrogen vehicle. For now electricity is abundant and cheap hydrogen is not. To supply an infrastructure for electric vehicles would be a lot easier and cheaper than one for hydrogen. All of the gas stations in the United States have electricity. You would only have to supply an electric distribution point instead of installing new tanks for the hydrogen and a deleivery system. I am not saying that hydrogen is a bad idea except for the fact that it is highly explosive, it's just that we already have produced more electric vehicles than hydrogen ones. To put electric vehicle production on the back burner in favor of hydrogen vehicles just seems a little backwards.

Sincerely
Lance Jones

Comment:

Now is NOT the time to reduce the requirements for ZEVs. These vehicles are on the verge of commercialization, and the Board should maintain its requirements for ZEVs. ZEVs are technologically feasible, but they need the Board's push for them to become commercially available to the public. If the Board changes its requirements, it will be delaying these vehicles by several years. The Board needs to maintain the requirements that ZEVs be produced.

Thank you.

Hello,

My family owns two electric automobiles. We do almost all of our driving without gasoline. To say the electric automobile is not ready is demonstrably incorrect.

Beside the emissions, electric cars are cleaner than gasoline cars. There is not coolant, no oil, no gasoline, and the batteries are almost 100% recyclable. Have you read the warnings on the gas pump and the oil can? Electric cars are a good solution.

Please encourage the automobile manufacturers to provide electric automobiles for sale.

They work well.

Stephen Dill

We demand zero-emission vehicles now, to save our weather, food supply and water supply. You have no right to keep this technology from us to continue to destroy the atmosphere, weather, and future food and water supplies. Scientists have just said that we need several decades of TOTAL ZERO emissions in order to right the terrible damage that has been done by oil, coal, gas and nuclear. We need solar roofs, no power lines that cause fires. We need windfarms. We need everything we can do to get our emissions down, so we can SURVIVE. The power companies can do this business. The government needs to force them to do it, or step aside and let others do it. Thank you.

Please do not reduce the ZEV requirement! We need to have reliable electric vehicles as a real choice for consumers. I know I want to buy one. I think most families with two or more cars could have one of those be a pure electric vehicle, since they're perfect for most daily commutes. But if there is no requirement to produce them, they'll stay as they are today, either marginal (neighborhood electric vehicles) or expensive (Tesla), which won't solve the problem.

Thanks for reading this!

Comment:

840 vehicles a year is not even a start; it is an insult. You must do better. Please don't allow the Zero Emission Vehicle (ZEV) Program to backslide by giving up 90% of the ZEVs promised by automakers and settling for only 2,500 vehicles from 2012-2014. We need ZEVs, and we also need plug-in hybrids. More options for consumers mean cleaner air for everyone. I ask you to (1) re-commit to the full 25,000 ZEVs the automakers promised, (2) create a separate requirement for plug-in hybrids that lets them replace dirtier vehicles, and (3) provide incentives for plug-in hybrids that have the most on-board electricity storage.

Subject: California Zero Emission Vehicle Regulation
Comment:

The California Air Resources Board (CARB) on March 27 will revise its Zero Emission Vehicle (ZEV) Program, which put more than 5,000 electric cars on the roads and avoided more than 1 million metric tons of carbon dioxide emissions (even when factoring in power plant emissions). In 2003, however, changes to the ZEV Program allowed electric cars to disappear as long as automakers promised to produce 25,000 ZEVs in 2012-2014 and 50,000 in 2015-2017. Now the automakers want out of that promise, and CARB will vote on a proposal to weaken the Program again.

California is the only state allowed under the Clean Air Act to set tougher limits on vehicle emissions than federal regulations. Other states can choose to follow California's standards, and at least 10 states hope to do so. The CARB vote has national implications.

Please continue to require the auto makers to life up to their previous promise

Subject: ZEV program
Comment:

I support your agenda to reduce greenhouse gas emissions 25% by 2020.

The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs), like the governors electric Tesla Roadster.

Unfortunately, the California Air Resources Board (CARB) may reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014.

Please ask your appointed CARB chair, Mary Nichols, to

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Choice for consumers means cleaner air for everyone.

Subject: Hold auto makers to their commitment

Comment:

I support California's goal to reduce greenhouse gas emissions by 174 million tons/year by 2020, which means cutting vehicle emissions by about 70 million tons/year. It's time for bolder action and a more effective Zero Emission Vehicle Program. Only California is allowed to set tougher tailpipe standards than federal regulations, and other states can follow, so California must lead the way. The nation needs you now.

Please require automakers to offer 100,000 zero-emission vehicles for sale in 2012-2014 (less than 2% of the market) to get us moving in the right direction. That's fewer than 6,000 vehicles per year from each of the six largest car companies. They can do it. Please support higher numbers of zero-emission vehicles, and get them on the roads soon. I drive a Toyota Prius because I believe it is the right thing to do, and if more fuel efficient vehicles are available Californians will buy them! The CARB should not give in to the laziness of nearsighted corporations but should use their regulatory authority to promote a business economy that supports the health of the environment the way we want it to.

Subject: More Electric Cars
Comment:

You know that cars and trucks have a significant effect on air quality.
You know that Zero Emission Vehicles are part of the solution to limiting green house gas emissions and pollutants.
You know that it is possible with present technology to produce effective electric cars and trucks that are marketable.
You know that charging 15,450 electric vehicles at night will not have a significant effect on the electrical grid.
Given these things and your mission, why would you even consider lessening your mandate to automakers to produce ZEVs?

Currently it is very expensive to get an electric car in California. Small golf cart like vehicles regulated to low speeds and conversions are the only options for many people. Why should this be the case? Why should we continue to burn fossil fuels when we have the technology ready to produce ZEVs?

Please do not lessen the mandate to Automakers for ZEV production. If you act in the true interest of Air Quality and greenhouse gas reduction, you will increase the mandate.
Thank you for your attention.

Comment:

Please do not impede the research and development no plug in hybrid vehicles as well as zero emissions (electric) vehicles. Both vehicles have very important roles to play in our reductions on our oil dependency. I also believe that mandated quantities of these vehicles should be approved. I believe this could help quell this issue of upper management within auto manufacturers changing their minds, possibly stopping development and production of the cars as the CEO of General Motors stupidly announced just over a month ago, throwing away the plans of selling the Chevy Volt by 2010. The American public over the last 34 years have been duped into believing the oil producers, car manufactures, and most of all our own government, have allowed the disaster which is now taking place in personal transportation. I am of the firm conviction that we as a people must override these organizations and finally remove the shackles our country has been tied down with. I actually thought that we as a nation would have never gone to war again for oil, but we did. It must stop.

Subject: Zero Emissions Vehicle (ZEV) program

Comment:

The ZEV goals were once 2% in 1998, 3% in 2001, and 10% in 2003, but later CARB put off clean air progress for 14 years until 2012. As that date draws near, CARB staff proposes to delay again, by cutting the target in 2012 from 0.4% to 0.04%. The new target does not even approach the number of vehicles you have previously shown to be possible. Today we have better technology and significantly raised consumer awareness, so there is no excuse for this backsliding. I ask that you put 25,000 pure ZEVs on California's roads between 2012 and 2014. If that is one fifth of the 1998 goal, but at least it is a start. Staff's proposed 840 vehicles a year is not even a start; it is an insult. You must do better.

Subject: ZEV
Comment:

The March 27 vote by California regulators could determine whether consumers across the United States get the choice to drive zero-emission vehicles soon or must wait another decade for that option.

With global warming threatening the planet and the cost of oil skyrocketing, we don't have time to wait. I beg you to help to make sure that clean cars hit the market soon.

The Zero Emission Vehicle (ZEV) Program put more than 5,000 electric cars on the roads and avoided more than 1 million metric tons of carbon dioxide emissions (even when factoring in power plant emissions). In 2003, however, changes to the ZEV Program allowed electric cars to disappear as long as automakers promised to produce 25,000 ZEVs in 2012-2014 and 50,000 in 2015-2017. Now the automakers want out of that promise. Please do not weaken the program further.

California is the only state allowed under the Clean Air Act to set tougher limits on vehicle emissions than federal regulations. Other states can choose to follow California's standards, and at least 10 states hope to do so. The CARB vote has national implications.

Please lead the way by keeping the ZEV PROGRAM as strong as possible

Comment:

Fuel cells are not the future, the cost and related problems are too numerous.

The electric car is ready, batteries are better, and California is smoggy and horrible--my husband refuses to visit California for vacations for this same reason. My cousin moved her children out of California due to their health problems the air quality was causing them.

If California is the state that decides the future of America and is so important--You need to stand up for your people and use that power to change California, change the air quality, change America, and change the world.

Thank you,

Jamie Williams, DDS. Miami, OK.

Comment:

The initial decision to give up on the ZEV program was contrary to the best interests of Californians and the duty of the ARB. As representatives of the citizens of California, you are expected to look out for the best interests of the citizens. This was not done when the ZEV regulation was dropped and GM and others were allowed to shred and crush their EVs which were undoubtedly in demand. Please act on the behalf of those you represent when you decide on the amendments to the ZEV program this year. I urge you to stand up to the special interests and stand for those you represent. Please put the past mistakes in the past and think of the future of the State. Please excuse the crudeness of my subject but I hope it got your attention.

Subject: ZEV Program Support

Comment:

This is our planet and we do not need a GPS to see where we are headed. By joining together, we can reverse the adverse effects that we have started. California and CARB can no longer sit back and wait for the world to get better; it is your responsibility to insure that we have access to clean transportation and we are dependant on a ZEV Mandate of the 1990's. I urge you to become part of the solution and to demand nothing less than what was asked for ten years ago. The ZEV Mandate of the 90's was supported and your rights to make such demands were upheld all of the way through to the Supreme Court. California needs 25,000+ truly zero emission vehicles per year and nothing less. Technology is available and improving daily; simply do the right thing.

Subject: ZEV Goals

Comment:

Please don't allow the Zero Emission Vehicle (ZEV) Program to backslide by giving up 90% of the ZEVs promised by automakers and settling for only 2,500 vehicles from 2012-2014. We need ZEVs, and we also need plug-in hybrids. More options for consumers mean cleaner air for everyone. I ask you to (1) re-commit to the full 25,000 ZEVs the automakers promised, (2) create a separate requirement for plug-in hybrids that lets them replace dirtier vehicles, and (3) provide incentives for plug-in hybrids that have the most on-board electricity storage.

Comment:

To the CARB board members,

An important decision is coming up soon. As of right now I understand you intend to significantly lower the required number of ZEV's that be put on the road. I strongly urge you to re-consider this and go back to the original number of zero emissions vehicles required in the proposal.

I live in Arizona, where we just recently adopted the California emissions standards. We and nine other states look up to California to set standards and trends, please don't let us down.

I just recently got an electric conversion on the road and have put about 5,000 emissions free miles on it since December 1st. If I can do this in my own garage it won't be rocket science for the auto manufacturers to do the same.

Subject: Please do not water down ZEV regulation again
Comment:

Letting the automakers off the hook for more ZEV vehicles in favor of promises of hydrogen fuel cell vehicles that are only 1/4 as efficient is a strategy that has not worked. As a taxpayer, I have no expectation that it will work in the future and am more than a little irritated at the high cost for hydrogen refueling infrastructure, and fuel cell research that has come at our expense.

Better technology is here already as TESLA and Phoenix Motorcars have already demonstrated. The only FCEV's that are even scheduled to be released to consumers are lease only, city specific Hondas. We have also been down the lease only path with Ford and GM. CARB should not accept any automakers claim of production that isn't available for purchase. GM, Toyota, Honda, and Ford are all guilty of ripping the California taxpayers off (not to mention the early adopters that participated with their own money and good will by leasing these vehicles) by collecting incentive checks the State, only to crush or otherwise destroy the vehicles when willing purchasers were available.

I trust that you will waste my taxpayer dollars on incentives or other subsidies for lease only vehicles, or hydrogen infrastructure, when affordable, mass produced, PURCHASABLE FCEV's are decades or more away.

Comment:

It's hard to express how disappointed the people of this country where in your board when you caved in to oil and automakers and killed off the electric cars. Yes, it's true. You killed the electric cars. You now have the opportunity to right that wrong by passing tough laws mandating that the OEM's build them again. Please remember that you can't change the laws of physics by committee and the hydrogen cars are far off. We need action now, today, not 30 years from now. Whatever you decide will decide the fate of the country. It's a heavy burden but we are hopeful you will be up to the task.
WE WANT ELECTRIC CARS.

P.S. Please leave the little motorcycle builders alone. They contribute nothing to the pollution problem.

Subject: ZEV Program
Comment:

I urge you to resist any weakening of the ZEV Program. If anything it needs to be strengthened and the industry needs to be pushed toward long-overdue progress in making ZEVs and plug-in hybrids available.

Please do whatever you have the power to do to mandate and incentivize plug-in hybrid technology with the longest on-board electrical storage (eg 20 mile range per charge) as it has the best hope of meeting the average user's real needs. (If I could buy one TODAY, I would, and I would only have to buy a tank of gas every other month).

Finally, please do NOT get suckered into diverting your energies (and ours) further onto the "alternative" biofuels path, which drives up food prices, accelerates forest destruction around the world and does much less than the ZEV or plug-in hybrid path to address emission issues.

Thank you.

Subject: Comments
Comment:

Dear Sirs,

I would like to go on record and state the following:

- * Require the full 25,000 ZEVs that automakers had promised for 2012-2014
- * Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs
- * Incentivize plug-in hybrids that have the most on-board electricity storage

I think these steps are necessary to keep the momentum going and do the maximum amount of good for our environment.

Respectfully,
Robert Smith

Subject: Comments for March 27, 2008 Meeting
Comment:

Glaciers are melting and we sit here as a society and debate if all-electric cars are viable or worth it!

This is where we all need to get to as fast as we possibly can: Take Norma Williamson, a public high school teacher in the Los Angeles suburb of Cerritos. Norma and her husband Alan have been driving a fully electric Toyota RAV4 since 2002. They charge the car with electricity generated by their home's solar panels. They haven't purchased gas in six years. They live—and propel—the promise of a pollution-free future.

With gas approaching \$4 per gallon all-electric vehicles charged by a home outlet supplied by a local home rooftop array of PVs is the absolute sane way to go , not only for ourselves, but our grandchildren.

I live in Colorado, and what California does will have an extremely positive or extremely negative impact on our entire society. Please do the right thing—support all-electric vehicles in every way possible.

We own two 1991 Hondas; we will never again buy a car until we get a home plug-in all-electric vehicle.

Please support both PHEVs and BEVs equally.

Subject: support original full ZEV mandate

Comment:

In its 3/27 meeting, CARB should reinstate its original ZEV mandate of 25,000 ZEV cars between 2012-14. This will provide the greatest pollution and energy savings and provide additional strong incentive for manufacturers to proceed down the direction they are slowly heading.

As a Washington State resident, I will also benefit from the full force of the original ZEV mandate, as my state follows California emission standards.

There is no legitimate scientific or technical reason to not enforce a relatively meager 25,000 ZEV cars.

Subject: INCREASE REQUIREMENT FOR MORE ZERO EMISSION CARS AND TRUCKS
Comment:

TO: CARB

As a very concerned Citizen, Taxpayer, and Voter, I am writing to urge you in the strongest possible terms to increase protections for the Public's health, and the health of our entire environment by requiring vehicle providers to immediately expand very significantly the number of ZERO EMISSION VEHICLES manufactured.

I further urge you to continue to impose regular, additional increases in the number of this type of vehicle, both for all types of cars AND trucks, until the vast majority of our vehicles are zero emission models. The technology exists to achieve this, and there is no justification whatsoever for public officials to delay requiring its use. You must act aggressively in mandating this change, in order to protect the common welfare of our citizenry and of all the other species with whom we share this land, many of which are vital to our own well-being and long-term survival.

The time for action is now! Delaying corrective measures to stem the extremely damaging emissions of the multiple pollutants present in vehicle exhaust will result in exponentially deleterious consequences, and such delay is completely indefensible in the face of the overwhelming scientific evidence of the harm these pollutants cause.

Accordingly, please do the right thing and force ongoing improvements in vehicle emission controls starting NOW. Voluntary action or guidelines for compliance are not acceptable, as the vehicle manufacturers have amply demonstrated their entrenched and to date, very effective, opposition to changing their damaging behavior.

Thank you,
Monica Steensma
Sonoma, CA

Subject: Zero Emission Vehicle Program
Comment:

I support California's goal to reduce greenhouse gas emissions by 174 million tons/year by 2020, which means cutting vehicle emissions by about 70 million tons/year. The California Air Resources Board is considering a plan on March 27 that will eliminate an average of only 291,000 tons/year by 2017 through its Zero Emission Vehicle Program. We need more than 200 times that progress by 2020! The plan also eliminates only a fifth of the smog-forming emissions from tailpipes that doom thousands of people to lung disease and death.

It's time for bolder action and a more effective Zero Emission Vehicle Program. Only California is allowed to set tougher tailpipe standards than federal regulations, and other states can follow, so California must lead the way. The nation needs you now.

Please require automakers to offer 100,000 zero-emission vehicles for sale in 2012-2014 (less than 2% of the market) to get us moving in the right direction. That's fewer than 6,000 vehicles per year from each of the six largest car companies. They can do it.

There's no time to wait. Global warming is threatening the planet. Air pollution sickens and kills thousands of people each year. Please support higher numbers of zero-emission vehicles, and get them on the roads soon.

Sincerely,

Kathryn Markham

Comment:

On March 27, the California Air Resources Board will revise the history-making program that put more than 5,000 Zero Emission Vehicles (ZEVs) on the road.

But their staff has issued a proposal that, instead of propelling our country ahead toward a pollution-free future, will profoundly weaken the program once again. This proposal would require automakers to produce only about 150 ZEVs each per year through 2015—which amounts to less than what these influential regulators mandated in 2003.

I urge the you, the board, for a stronger proposal that puts more ZEVs on the roads, and helps move California toward the future.

Subject: Do not weaken the Zero Emission Vehicle Regulation

Comment:

All we have been doing on this issue over the years is going backwards. From taking the lead in zero-emissions technology, California is falling over itself to kowtow to the auto industry and roll back every meaningful piece of regulation. When even the Bush administration admits that global warming is real and damaging, how can we even consider weakening one of the few regulations that actually does anything about it? Do not allow automakers to avoid compliance with the ZEV targets to which they have already agreed.

Subject: stop the BS save our lives

Comment:

the technology for our being able to run our vehicles at zero emissions has been out their forever, well at least 20 yrs. Stop fooling around. Let us have the production increase inspire our culture to be emission free. So we can all benefit from this. The reasons for the delay is not in the best interests of the citizens of the world. Air is a world issue.

Subject: Multiple win for ZEVs
Comment:

ZEVs mean:
Eliminating foriegn oil dependance.
Decreased cost to the consumer, perhaps more so in the future.
National foriegn policy independent of foriegn oil supplying
governments / dictators.
Reduced trade deficits.
PHEVs means:
Interim progress toward the above until ZEVs become a reality.
Californias actions:
Positive over flow other tag-along states, given the leading
market California has.
Demonstration that various approaches actually work.

Form Letter 440 for Comment 97 for ZEV 2008 (zev2008) - 45 Day.

First Name: Dave
Last Name: Severns
Email Address: dave@severnsfoundation.org
Affiliation:

Subject: Do not reduce ZEV regulations
Comment:

Dear ARB,

Please not kill the electric car for a second time.

I am a huge supporter of both PHEV's and EV's (I am on the Tesla waiting list). Please do not play one against the other by reducing mandatory ZEV production in favor of PHEV's. They BOTH need support.

Why are you proposing these changes when the evidence against them is so compelling?

Global Warming
Peak oil
Energy Independence
National Security
Clean air

The only reason I can see is that the lobbyists from both the major auto manufacturers and Big Oil are putting the pressure on. History has shown that the auto makers need regulation in certain areas to do the right thing. Seatbelts, air bags, antilock brakes. In many cases, the "right thing" also helped their businesses in the long run. Look at the Prius (I own one). Using technology invented by Ford, Toyota is making millions by getting the jump on the rest of the industry.

Each month, we read reports that Global Warming is accelerating. We may be running out of time. Don't you think it's better to err on the safe side?

EV's and PHEV are our future. In addition to the Tesla, I am also on the waiting list for a PHEV conversion for my Prius. I have solar power on my home and this year will "donate" over \$300 of electricity to the California grid on my true-up date. When I get my Tesla and convert my Prius, most of my driving will be powered by MY OWN solar system. I find the wait for these new technologies agonizing, and I look to you to do the right thing and promote both of them.

Under the Clean Air Act, California is the only state allowed to set tougher limits on vehicle emissions than federal regulators. Ten other states have adopted California's emission limits and will most likely follow with your upcoming decision. The board's vote has national implications.

Gas prices will not be coming down. Consumers want cleaner, more efficient cars. According to a recent Harris Interactive poll, 80 percent of respondents said fuel efficiency would affect their next new car purchase.

Please continue to lead the nation by strengthening your proposal and get more electric cars on the road. We ask you to support a stronger Zero Emission Vehicle Program that will help us all turn back the clock on pollution and dependence on foreign oil.

Best Regards,

Dave Severns

Subject: Zero Emission Cars Now
Comment:

A historic vote by California regulators on March 27 could determine whether consumers across the United States get the choice to drive zero-emission vehicles soon or must wait another decade for that option.

With global warming threatening the planet and the cost of oil skyrocketing, we don't have time to wait.

The California Air Resources Board (CARB) on March 27 will revise its Zero Emission Vehicle (ZEV) Program, which put more than 5,000 electric cars on the roads and avoided more than 1 million metric tons of carbon dioxide emissions (even when factoring in power plant emissions). In 2003, however, changes to the ZEV Program allowed electric cars to disappear as long as automakers promised to produce 25,000 ZEVs in 2012-2014 and 50,000 in 2015-2017. Now the automakers want out of that promise, and CARB will vote on a proposal to weaken the Program again.

California is the only state allowed under the Clean Air Act to set tougher limits on vehicle emissions than federal regulations. Other states can choose to follow California's standards, and at least 10 states hope to do so.

Please vote put zero emission vehicles on the road now.

Thank you.

First Name: Rita

Last Name: Summers

Email Address: rsdispose2@comcast.net

Affiliation:

Subject: Zero-emission vehicle regulation

Comment:

I was born in Los Angeles but had to leave my home city because of air pollution. But I cannot leave the earth, which now exhibits rapid and undeniable effects from climate change. California is a major contributor to those effects.

I support California's goal of reducing greenhouse gas emissions by 174 million tons/year by 2020, which means cutting vehicle emissions by about 70 million tons/year. The plan that the Board is considering would eliminate an average of only 291,000 tons/year by 2017 through its Zero Emission Vehicle Program. We need more than 200 times that progress by 2020! The plan also eliminates only a fifth of the smog-forming emissions from tailpipes that doom thousands of people to lung disease and death.

California needs bolder action and a more effective Zero Emission Vehicle Program. Only California is allowed to set tougher tailpipe standards than federal regulations, and other states can follow, so California must lead the way.

Please require automakers to offer 100,000 zero-emission vehicles for sale in 2012-2014 (less than 2% of the market) to get us moving in the right direction. That's fewer than 6,000 vehicles per year from each of the six largest car companies. They can do it.

We cannot wait. Global warming is threatening the planet. Air pollution sickens and kills thousands of people each year. Please support higher numbers of zero-emission vehicles, and sooner.

Sincerely,

Rita Summers

First Name: Rob & Barb
Last Name: Wiebell
Email Address: tetons97@mac.com
Affiliation: Taxpayer

Subject: ZEV Mandate
Comment:

Please require the car manufactures to build a percentage of electric vehicles.

With the price of fuel and what we are doing to our environment, it's imperative that a ZEV be strongly promoted. Hybrids are a step in the right direction but a pure electric, such as were produced in the last decade in California would be a "leap" in the right direction.

For National Security, our health, our economy and our environment, please vote for implementation of the rules requiring a percentage of non polluting vehicles.

PLEASE !!

Sincerely,

Rob Wiebell

BTW...I saw at the PIA site that your board was discounting "form" letters. Maybe the people didn't have the time or ability to write their own thoughts. They did however take the time to submit their agreement with the "form" letter.... When we vote, we make a "mark"

Sincerely,

Rob Wiebell

Subject: Time to fix your mistake.

Comment:

You killed the electric car. Now is your chance to fix that mistake.

Please enforce and require the full 25,000 ZEVs that automakers had promised for 2012-2014. You should also create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs. Incentivize plug-in hybrids that have the most on-board electricity storage. In short, the electric car benefits our environment and our future generation. Take a stand and show the world that California is the leader in this area rather than succumbing to the special interests of oil companies and automakers.

Subject: ZEV2008

Comment:

A historic vote by the Air Resources Board on will be taking place soon that could determine whether consumers across the United States get the choice to drive zero-emission vehicles soon or must wait another decade for that option.

On March 27 you will revise your Zero Emission Vehicle (ZEV) Program, which will put more than 5,000 electric cars on the roads and avoid more than 1 million metric tons of carbon dioxide emissions (even when factoring in power plant emissions). In 2003, however, changes to the ZEV Program allowed electric cars to disappear as long as automakers promised to produce 25,000 ZEVs in 2012-2014 and 50,000 in 2015-2017. Now the automakers want out of that promise: will you vote on a proposal to weaken the Program again?

California is the only state allowed under the Clean Air Act to set tougher limits on vehicle emissions than federal regulations. Other states can choose to follow California's standards, and at least 10 states hope to do so. The CARB vote has national implications. With global warming threatening the planet and the cost of oil skyrocketing, we don't have time to wait.

Subject: ZERO EMISSIONS VEHICLES
Comment:

Dear Californis Air Resources Board,

Please adopt the a strong Zero Emission Vehicle standard that UPHOLDS the original 2003 CARB standard for the production of agreed upon numbers of Zero Emission Vehicles.

I live in the Las Vegas Valley and we need your leadership to help us reduce our own valley's persistent and dangerously high air pollution. Please don't let automakers off the hook of producing these needed vehicles.

Our "window of time" to reduce greenhouse gasses is very short - 5 to 10 years - so your leadership is crucial.

Regards, Eric C. Blumensaadt
Henderson, NV

Subject: Zero Emissions Mandate

Comment:

To whom it may concern,

A zero emissions mandate is not a good idea, nor is it a smart idea, but it is absolutely necessary for the continued existence of our way of life. To ignore the environmental facts, to cast aside concerns for climate change, are completely ridiculous and show a complete lack of intelligence in the decision making processes of our society. It disgusts me that the human race has become so greedy and self centered, that they can hardly see outside of their personal circumstances. A few dollars made here, a few hours saved there and a high standard of living, mean nothing when faced with the impending reclamation of our world. Ignoring facts of climate change and environmental damage, is, in essence, condemning your own species to death.

Please don't let auto manufacturers off the hook again. Instead, require them to offer for sale 100,000 ZEV's in the period 2012 thru 2014. They can do it.

There will always be better batteries just around the corner, but we can't wait to get to the corner. The rest of the country is counting on us. If we don't ask the auto manufacturers to stand up for our environmental future, by federal law other sates prohibited from doing so. Only California can lead the way and lead we must.

Subject: Save the Electric Car!

Comment:

Dear board members of CARB, I am a concerned citizen urging you to please strengthen the ZEV 2008 mandate on March 27th 2008. I believe that the good people of California are eager to have the opportunity to buy zero emission automobiles. The best solution is to demand auto makers to make more electric and plug-in hybrid cars available to the public. As fuel costs rise to record prices each day, it is only fair that consumers be offered the option to own automobiles that are fuel efficient. Also, the public awareness of carbon dioxide emissions and the damage it causes to the environment is another concern that must be addressed. Electric automobiles will help mitigate the tons of carbon dioxide that is released into the atmosphere. Let the people of this great state make a statement to fight rising fuel costs and climate change at the same time by allowing them to drive cars that will make a difference!

Sincerely,
Wilson Chau

Subject: ZEV2008

Comment:

America used to be one of, if not the greatest country in the world. We have been sliding backwards for many years now. One major reason is because our businesses produce what they want the public to buy, not what the public wants. The California Air Resource Board has an opportunity to improve the quality of our nations polluted air and provide an incentive to our auto producers to produce what the public wants. The public wants plug-in hybrids with a range of at least 50 mile per charge, the public wants cleaner air, the public wants no dependance on foreign oil, the public want no soldier to die for oil in Iraq or anywhere else, and the public wants good high paying manufacturing jobs like we used to have. Do the right thing by requiring more zero emission cars from auto manufacturers and perhaps America can begin winning back market share in the auto manufacturing sector. Are you going to help American get better or are you going to continue supporting our slide? As for me, I support those who are working to make American better.

Thanks

Steven L. Adams

Subject: Fully Implement Electric Vehicles!

Comment:

It makes absolutely NO SENSE to cut the allowable production of EVs. More, not less electric cars, similar to Governor Schwarzenegger's electric Tesla, are required immediately at this point in the state of California's effort to cut greenhouse gases.

Motor vehicles contribute the most to greenhouse gases, and the price of gas is skyrocketing.

Investment in green technology conversion such as the infrastructure involved in accommodating electric cars: provision of renewable sources of electricity (so that coal is not substituted for oil in the origin of the energy), conversion technology to switch vehicles from old to new energy, and building adaptors in homes and public places to "gas up" with gas-less power, are a few ways the ailing economy of the state and the entire nation could be turned around now around the already proven electric vehicle industry.

CARB is supposed to rule with the best interests of the public and the environment in mind, not the preferences of industry. Please live up to this purpose. SAVE the ELECTRIC CAR!

Comment:

You have the world watching now do the right thing. I do not want to be oil dependent. So vote to keep the electric vehicle in production. Make the auto makers of America build them once again. But not in 2020. The environment needs them now. Lets not play catch up with the world. So you all know in your hearts what you must do. Do not let big oil and politics get in the way of thinking clear about this subject. What you do on the 27th will effect not only history but it will change the environment and the way we all live. You all know that the cost of oil effects everything. From food to trees.

You all let the last chance go by the way side and America and the world has paid for it. ITs really time.

Thank you.

Sincerely,

Joe Lambrix
President, Community Liaison
Plug In Olympia

Subject: Allow electric cars!

Comment:

As a Canadian who has worked in oil and gas, I have seen the massive destructive properties of the use of oil and gas. I am a strong supporter of taking action to reduce massively the consumption of "black gold". Please take leadership and allow electric cars and demand lower emissions for our world. I don't want to live in a world that will destroy itself for no logical reason other than to make someone more money.

Sincerely,
Steve Bastian B.A, B.Ed, A.A.R.

Subject: The upcoming vote on electric cars
Comment:

Hello,
My name is Anna Vanderhoof. I am a freshman at Syracuse University in New York. My major is environmental engineering. I have watched the documentary "Who Killed the Electric Car" quite a few times, and each time I watch it, I wonder why; why would the "Air Resources Board" vote down such a needed mandate. In the documentary it says how California has the worst air quality and yet you voted down the Zero Emissions mandate! Please, with this vote on March 26, the U.S. needs this push, the car companies need this push. It is becoming more and more important all the time with global warming becoming an ever bigger problem and the cars we have now are a major factor in that. WE NEED ELECTRIC CARS! A LOT OF THEM!
Please, I encourage you to make the right decision and not vote it down again!
Sincerely,
Anna Vanderhoof

Subject: My electric cars works great

Comment:

I've been building/driving electric cars for 35 years. many people want to, but no auto dealer can sell them one because industry lobbyists hate the fact that they do not need the thousands of belts, hoses, mufflers, fluids etc. that they want to sell. My car has a lifetime motor with one moving part.

It's sad that after so many years of successful driving there is still no place to recharge my car away from home. Gas stations must be forced to provide at minimum, 110 and 220 volt outlets for today's and tomorrow's electric vehicles. I've never had a single gas station allow me to plug in when my batteries are low, but still I can drive 200 miles a day up to 80mph. Which reminds me; reducing the state speed limit would go far in saving fuel, lives and stress.

Comment:

Hello. As an owner of a hybrid which would be much more effective if it were a plug in electric (most of my driving is within 6 miles of my home, and my hybrid takes at least 2-3 miles to go 100% electric). Our town (San Luis Obispo) installed plug in stalls in most shopping center and public parking lots years ago thinking that the California Air Resources Board would hold fast to its prior requirement for electric vehicles, which never happened. Those stalls sit empty, ready for electric vehicles, as there is only one in time to use those spots. As a concerned citizen, I urge you to hold the Detroit auto makers to the currently existing requirements mandating them to produce electric vehicle at the currently required level or higher. California has the opportunity to lead the nation in requiring alternative and more environmentally friendly automobiles. Given our lack of adequate public transportation and suburban and urban sprawl in this state, we owe it to turn a new leaf.

Subject: Electric Cars
Comment:

I am sorry, I have completely lost faith in CARB and see it as a waste of taxpayers' money and an arm for auto and gas companies to twist easily to their benefit.

No one ever addresses the incredible demands on California's electrical grid by oil refineries, nor are their heavy metal discharges mentioned in any environmental articles.

We have, or more accurately, have had a wealth of smart people developing Electrical Vehicles leave the state due to non-support from governmental agencies. Other EV developers and builders have vehicles that could be running pollution free but for the inability to register them. California is losing it's cutting edge status and the state government is part of why.

For years I taught overseas, lauding California's clean air laws only to return home and find a pall of SUV smog hanging over the San Francisco Bay. After living in a country where 80% of children had some level of lead poisoning due to foul air, this was a major disappointment. I was determined to buy an EV, only to find them pulled from the market, so I built an EV myself. As I share my experience with others I learn how lucky I was in being able to get my car registered and how just after I got on the road the rules became more strict..

THIS is like communist China, one step forward, two steps back! Shame on CARB for its role in this reverse movement. I ahve no doubt that nothing beneficial to clean air will come out of this agency.

I am only writing this on the behalf of my EV club. I am sure none of our input will even be considered. I think we should lobby for the end of CARB

Subject: Put ZEV vehicles on the road ASAP

Comment:

It has come to my attention that you are soon to vote on a plan to modify the Zero Emission Vehicle (ZEV) Program in a way that could keep electric cars out of consumers' hands for another decade.

I am writing to you to tell you that this is unacceptable! Since these decisions always come down to money, and the fact that someone is threatened to make less of it -- in this case oil companies and gas-powered car manufacturers -- please consider this: the fastest-growing segment of vehicles are hybrids. The waiting list for hybrids has been consistently long for quite some time now. Hybrid owners are more likely to recommend their cars to others than any type of owner. There is obviously tremendous demand for environmentally-friendly vehicles, so perhaps the CARB and other government agencies should ally with companies promoting ZEVs rather than squashing them and help make some \$\$ of them the good old-fashioned American way.

Subject: Electric vehicle ZEV mandate

Comment:

Please increase greatly your electric vehicle portion of your ZEV mandate at your up-coming meeting. I drive a factory built Chevy S10 pickup electric vehicle made because of your previous electric vehicle mandate. I love the truck. I drive it almost every day, and I charge it from solar panels on the roof of my house. This truck really runs on sunshine!!!

I am just part of the tip of the iceberg of support for electric vehicles and what they can do to eliminate global warming. So get with the program and go electric. Not just hybrid electric drive, but pure plug-in electric drive. GM made a good EV 10 years ago, they can certainly do it now.

Stephen Weitz

Oakland, CA

First Name: Gary

Last Name: Gerber

Email Address: gary@sunlightandpower.com

Affiliation: Sun Light & Power Company

Subject: Zero Emission Vehicles

Comment:

I own Sun Light & Power, one of the oldest solar installation companies in the state. I have been driving a ZEV for the past 8 years. Aside from requiring virtually no maintenance, my RAV4EV is 100% solar powered due to my recharging stations at both my solar-powered business and my solar-powered home. By using ZEV's powered by photovoltaic power, I have been able to avoid about 25 tons of CO2 emissions over the past 8 years.

When I propose this same energy solution to my customers, they get very excited, until they find out how hard it is to find a ZEV. I am convinced that there can be a huge market in California for ZEV's, in spite of what the automakers say. PLEASE don't make the same mistakes that were made 5 years ago - we need a robust electric car industry, we need to give the people of California the opportunity to make a clean vehicle choice, and if CARB doesn't make it happen, and leaves it up to the automakers, it may never happen. CARB needs to establish an aggressive goal for electric cars, and it must not cave in to Detroit again.

Subject: ZEV's / Get them back on the road
Comment:

Please help urge our Governor to have the Board create a stronger proposal to put have ZEV's on the road. I personally had A Ford Think EV. It was terrific! It enabled me to cut my fuel usage by two thirds by way of it's 50 mile range and 55MPH max. It worked. Unfortunately, FORD cancelled the program and took back all the cars, right after the board rolled over on the original ZEV mandate. THERE WAS A WAITING LIST FOR THESE CARS! Here we are years later with gas approaching \$4.00 and Diesel currently over \$4.00 attempting a "weaker than original" proposal. Let's get this done and show the world how the "Great State of California" can really be.

Thank You,
Michael Mead
Costa Mesa, CA

First Name: Aaron

Last Name: Israel

Email Address: izzinsf@gmail.com

Affiliation: Sierra Club !

Subject: Strengthen the ZEV program!!!

Comment:

Dear Chairperson Nichols,

We at Sierra Club admire your work and consider you an ally. We are counting on you to improve the ZEV program now being considered.

The plan you are considering on March 27 that will eliminate an average of only 291,000 tons/year by 2017 through its Zero Emission Vehicle Program. We need more than 200 times that progress by 2020! The plan also eliminates only a fifth of the smog-forming emissions from tailpipes that doom thousands of people to lung disease and death.

It's time for bolder action and a more effective Zero Emission Vehicle Program. Only California is allowed to set tougher tailpipe standards than federal regulations, and other states can follow, so California must lead the way. The nation needs you now.

Please require automakers to offer 100,000 zero-emission vehicles for sale in 2012-2014 (less than 2% of the market) to get us moving in the right direction. That's fewer than 6,000 vehicles per year from each of the six largest car companies. They can do it. There's no time to wait. Global warming is destroying the planet. Air pollution sickens and kills thousands of people each year. Please support higher numbers of zero-emission vehicles, and get them on the roads soon.

Sincerely,

Comment:

I am surprised and shocked to find out that CARB is only asking for 150 ZEV cars per year till 2015. This thinking is incredibly backward for California and perhaps even in Detroit, where GM has signed on to manufacturing a serial-hybrid, the Volt for purely economic reasons.

Californians deserve a much-higher standard than the one you're proposing. Please reconsider. Your mandate is control of air pollution for the health of Californians, not placating the auto industry.

Thank you,
Sridhar Subramanian

Last Name: Warmuth

Email Address: nicolawarmuth@gmail.com

Affiliation:

Subject: Electric cars

Comment:

On March 27, please vote to make the program that put more than 5,000 Zero Emission Vehicles (ZEVs) on the road.

The proposal created recently is, instead of propelling our country ahead toward a pollution-free future, will profoundly weaken the program once again. This proposal would require automakers to produce only about 150 ZEVs each per year through 2015—which amounts to less than what these influential regulators mandated in 2003.

Please urge the Governor to ask the board for a stronger proposal that puts more ZEVs on the roads, and helps move California toward the future.

Thank you for your help

Subject: Don't back down again

Comment:

Please I beg you not to back down again. The last time CARB backed down GM crushed an icon and they promised to bring hydrogen to the for front to replace the BEV with a new ZEV. They had the technology for the BEV and Hydrogen was years out. Why would anyone want to bet on technology that is not here yet for technology that is here now? Then to make things worse when GM got their way they sold their controlling interest in the NiMH battery to an OIL company so nobody else could use it like Toyota in the Rav4 EV. If GM wants to make changes I would only agree if they agree to bring the EV-1 back and sell them outright to customers that want to purchase them and lease to others. GM has to be held accountable for their promises and if they want to go back on make them go BACK to the original promise!!!

Myron & Jennifer Benner

Comment:

Chair Mary Nichols I, respectfully urge you to support production of electric vehicles - the automotive technology that could work NOW to help clean our air and cut CO2 emissions by substantial amounts = helping to lower many costs, including medical & health care.

As gasoline prices lurch toward the \$4.00 per gallon mark, it is so very important for of us to work together to hasten the day when we can dump the pump by start driving clean, efficient electric cars.

We will also increase our National Security by becoming less dependent upon Foreign resources and reducing our exposure to terrorists who are able to more easily attack us by attacking our oil tankers at sea, and on oil facilities on foreign soil. Terrorists have a substantially more difficult time attacking us on the home front.

Respectfully,

Thomas Fausone

Subject: Please keep the Zero Emission Vehicles program

Comment:

Please keep the current Zero Emissions Vehicle program and make it better. History has shown that when we the people push automakers better technology is developed.

Pushing this program will help us meet the new EPA ozone levels, especially in places like los angeles, where the ozone levels have not been met.

Keeping this program is the right and moral thing to do. People of california most than any other state have shown that they think about the right and moral thing to do when buying a new car.

I am personally not buying another vehicle unless is a Zero Emission vehicle, and or a Plug in Hybrid.

Thank you for listening. and I hope for the better of our future that this program is kept.

Subject: Upcoming ZEV decision - covert all existing cars to all-electric

Comment:

I have informed myself about the obvious feasibility and viability of all-electric vehicles. I have watched "Who Killed the Electric Car", and have shown it to family and friends. I have taken it very much to heart.

I write to strongly express my support for an expanded, rather than a reduced, all-electric vehicle requirement for auto manufacturers. However, I would go further than requiring production of a larger percentage of new cars to be all-electric. Instead, I would promote the conversion of the already crash-tested, roadworthy gas-powered cars we all own into all-electric cars. To do otherwise is to waste a precious resource in the cars we already own, and to encourage further environmental damage by manufacturing new cars. This option will be much cheaper for each consumer and our ailing economy with strong interwoven links to the world economy, and thus much more viable. I would tax the production of gas-powered cars as much as possible, and plough the proceeds into battery and solar-power research and manufacture by small innovative companies.

You have a duty to the public, not private companies who cannot - and rightfully do not in a democracy like ours - vote. The large automakers can easily afford to produce all-electric vehicles - they simply don't have the disincentive to not use the infrastructure they use to produce the long-obsolete technology they continue to sell us - the gas-powered vehicle. If we do not impose it, the consequences to our health, environment and our currently unsustainable economy will continue to escalate. It is your duty within your mandate to do your best to ensure this does not occur. A sustainable economy is based on a sustainable environment, and on preserving the wealth of individuals rather than turning them into constant consumers, constantly needing to spend to meet the basics (for example, on gas, not only to work but for the mass transport of food; ZEVs transporting food would eliminate most of the major transportation (gasoline) costs involved in purchasing food, meaning instant poverty relief to millions and millions of Californians). You have tremendous power that the People of California have invested in you to make wise, far-reaching decisions that will benefit the lives and prospects of millions of people - not just in California, but throughout the US and around the world by your wise example. Let it be so.

Sincerely,
Simcha Udwin

Comment:

I just saw the movie "Who Killed the Electric Car?" and was disgusted and appalled. How could so many people be influenced by individuals who only have their very own short-term interests, i.e., accumulation of their personal wealth, in mind? How could anyone with children and grandkids not think about a better, i.e., safe, healthy, viable, future for them.

Please do not ease the requirements on the ZEVs from automakers. Please require the full 25k ZEV's that automakers promised for 2012 - 2014.

Don't let the power, influence and money of selfish people influence you. Just say NO to them.

Subject: Protecting use of the Electric Car
Comment:

Dear Board Members,

I drive and Electric RAV4-EV in South FLorida. Thousands of South Floridians have seen me driving an all Electric RAV4-EV. It looks exactly like any other RAV4 but is all electric.

I drive to and from work in a quiet, no motor noise, and clean, emissions controlled at the power plant, electric car. When I am stopped in traffic, the electric motor is OFF, and no emissions are being created unlike the hundreds of cars around me in traffic that by design keep spewing pollution into the air.

There is only so much capacity of the air to hold contaminants. It is time to accept the consumer demand for electric cars. Consider that many gas cars have already been converted to electric by their owners and are quietly moving about on streets and highways of the United States.

It is time the government of our country to acknowledge the grass roots change being forced by economic necessity. Americans are not waiting.

I strongly encourage all Americans and supporters for protecting our planet to join this effort to restore the right and privilege of every American to drive a car of their own choosing-the electric car. Restore and protect the right and privilege of every American to buy a new electric car not just accept conversion of their used car into an electric car.

Electric cars, new or used, are creating jobs and opportunity that is clean and safe. Vote to protect and restore electric car use.

Here's to America's future, peace, and prosperity,

PAUL F RENNEISEN

Subject: PUBLIC HEARING ON 2008 ADMENDMENTS
Comment:

Dear Chairperson:

I have seen the DVD-Who Killed the Electric Car, and the part that CARB, and GM played in that infamous action a few years ago. It is well known that California leads the Nation in Green Technology, and Electric Vehicles Development, and what California does certainly influences what other States, and the Federal Government does.

It is critical that our vehicles move off of dependance on Foreign Oil at the earliest opportunity, and towards renewable energy. The very Financial Future of these United States depends on this action. Here in the US Virgin islands we are paying over 34 cents per KWH for Electricity, because we generate all of our power now from Oil, and we are paying over \$4.00 a gallon for regular gas on St. Thomas, more on St. John. St. Croix pays less due to the HESS/HOVENSA refinery on that island, but its oil stock comes from Venezula, certainly no friend of the USA. With a median income of about \$26 K per year, our citiznes are being forced to choose between food and electricity, and gas. Please DO NOT repeat the 2003 decision again..STAND UP to the Oil Companies, and GM Pressure this time for the good of ALL AMERICANS. The very future of our Union may well depend on your vote this coming week.

Subject: electric cars

Comment:

We need to go forward and to do so requires you to turn your back on the short term interests of the corporate world and to look to the future and the technology we must embrace lest we become a backwater in the emerging technologies. This requires you to rethink your decision regarding the paltry number of electric cars mandated to be built for sale here in California. This nation really needs people in power to look out for our long term interests and not be so concerned with keeping a status quo that while it might be comfortable for the present, will lead to long term misery.

Sincerely,
Michael T. Nola

Subject: Zero-emission Vehicles are Overdue.
Comment:

California has the opportunity to pave the way for our nation. We have some of the worst pollution (I lived in Sacramento for 14 years, I know!). I urge the Board to require automakers to offer 100,000 zero-emission vehicles for sale in 2012-2014 (less than 2% of the market) to get us moving in the right direction. That's fewer than 6,000 vehicles per year from each of the six largest car companies. They can do it.

We have no time to waste. Global Warming is happening now - we have to make changes.

Subject: Stay tech neutral, and put ZEVs on the road
Comment:

After reading the plea from Mercedes to continue down the path of "assist the expensive long-shot" of Fuel Cells (by allowing FCV's to count more than other cheaper, instantly available technologies, and by supporting expensive fueling infrastructure) - I have to again ask that CARB stay technology neutral. When technology sides are chosen, we all lose. When ZEVs of any type were required in the 90's, many thousands of ZEVs were placed on the road. When FCV's were given preferential treatment, almost all BEVs were removed from the road, and here we sit with nothing to show for the efforts.

Can we now stop the madness? Desirable BEVs could be built and placed in service 12 years ago. We can charge them at home with no new infrastructure needed. We can make our own renewable fuel for them. Insist on ZEVs of any technology and let the chips fall where they may. Give preferential treatment to the long shot, and we'll just keep on shooting. We need the cars, not the promises.

Comment:

Electric cars and plug-in hybrids coupled with proven renewable energy like PV, concentrated Solar, Wind and Hydro are our best bet to slow global warming and achieve energy independence.

All of this could be greatly enhanced at no extra cost to taxpayers simply by switching subsidies from Gas/Oil/Coal to renewables. It could be achieved even more rapidly by investing a small fraction of our state and federal budgets while creating thousands of good american jobs.

Please do what you can to support Plug-in vehicles of all kinds. American Auto makers will not change without government intervention.

Thank you for all your work to preserve and improve California's most precious resource -- our air.

I support your agenda to reduce greenhouse gas emissions 25% by 2020.

The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs)

I am asking you to require the full 25,000 ZEVs that automakers had promised for 2012-2014, and to create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Choice for consumers means cleaner air for everyone.

Thank you for your consideration,

Patricia Paton

Comment:

Please see the attached Solar-Electric-Charging-Stations that will be marketed here in Florida and California very soon. Please try and provide incentives for such charging stations and electric vehicles to network their capacitive energy back into the electric grid, and vice versa..

As you well know, by now electric vehicles can input additional capacitive and stored battery energy into the grid during the day (during peak hours of energy demand) then at night these same cars can replenish their electrical battery's to re-supplement and charge the electric vehicles battery banks when demand is lower and cheaper at night..

As you can see with the attached Solar Electric Recharging type Carports, that electrical energy from the grid would be decreased tremendously, if these types of solar powered carports were installed, incentivised and networked with electric vehicles through bi-directional inverters. These attached bi-directional inverters would either put energy into the grid from the electric cars, networking and load sharing peak hour demand through the carports solar powered roof panels or re-charge the batteries of an electric vehicle reducing traditional electrical energy supplied from the electrical grid.

This energy load balancing process benefits all parties involved in the supply chain, regarding electrical grid load balancing. This balance of energy and conservation should be seen in light of any future amendments you decide to implement with this policy and can encourage manageable and sustainable electric vehicles for a very controlled, responsible electrical load balancing policy.

As you can see, solar power (as shown with the attached layout and example) that infrastructure is just one step away from a carbon neutral reality. This element of neutrality with hybrids and full electric vehicles needs to be advocated in a positive light to encourage and empower citizens, director agencies, car manufacturers and Govt. to do the right thing, in implementing electric vehicle incentives and reducing carbon emissions simultaneously..

...even though I am not a resident of California..your state sets a precedent for all other states to follow and must lead in the promotion and encouragement of electric vehicle regulation (to an extent.. and only through incentives) that produce results that inform and encourage informed citizens and car manufacturers to

build more sustainable cars that is of moral direction to promote future sustainability. Concerned citizens should have the right to control their energy networking and conservation of their vehicles with the electrical grid as both voluntary and/or mandatory controls.

Please consider these rules or future rules in your agencies policys..

Signed,

Concerned Citizen

Comment:

I know that on March 27 CARB will revise the history-making program that put more than 5,000 Zero Emission Vehicles (ZEVs) on the road.

I also know that CARB staff has issued a proposal that, instead of propelling our country ahead toward a pollution-free future, will profoundly weaken the program once again. This proposal would require automakers to produce only about 150 ZEVs each per year through 2015—which amounts to less than what these influential regulators mandated in 2003.

Please do not weaken ZEV2008. It is vitally important to our country that we do all we can to combat global warming and to reduce our dependence on foreign oil.

Thank you.

Comment:

I support your agenda to reduce greenhouse gas emissions 25% by 2020.

Unfortunately, the California Air Resources Board (CARB) may reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014.

Please ask your appointed CARB chair, Mary Nichols, to

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Choice for consumers means cleaner air for everyone.

Subject: Electric Cars are extremely important for California
Comment:

Dear Ms. Nichols,

I am very concerned to hear that the California ARB Zero Emissions Vehicle (ZEV) program may be changed from mandating 25,000 vehicles from 2012-2014 to only 2,500. California consumers need to have more choices to buy electrically powered cars. A wider option for buying ZEVs will result in cleaner air and a reduction of dependence upon foreign oil - two goals vital to our state. Additionally, it will help support California based businesses like Tesla Motors who are currently shipping highway capable ZEVs.

Past experience has shown the CARB ZEV program is crucial in making a choice of highway capable ZEVs readily available. While ZEV and battery technology has grown considerably in recent years, today's consumer has much less ZEV choice than the consumer of 8 or 10 years ago.

Please recommit to requiring the full 25,000 ZEVs previously promised. Additionally, please create a separate requirement for Plug-in hybrid vehicles which allows them to replace dirtier vehicles.

Sincerely,

Graham Orndorff
Aptos, California

Subject: CARB must support BEV, ZEV, and PHEV

Comment:

CARB has let down Californians and the many Americans whose states adopt CARB regulations before in terms of backing down to automakers wants and wishes in terms of ZEV and BEV and PHEV vehicles. Please do not do it again and push back demand for these GHG friendly vehicles. Just like your states RPS for renewable electricity mandates supply of clean, renewable energy, CARB's decisions to force automakers to make electric vehicles will advance the technology faster than normal market conditions would allow. We need these technologies so that both major sectors that produce GHG, power generation and transportation can be converted to form a full loop of clean technology.

As a soon-to-be college graduate interviewing in the renewables sector, it is legislation such as this supporting BEV, ZEV, and PHEV that help raise the tide of the entire green economy, promoting more awareness and adoption of cleantech. I hope to working in your state soon to develop fields full of PV panels, but my efforts will go much further if those fields are used to power our automobiles. Please encourage CARB to support cleaner cars in a BIG way.

Subject: we need electric cars !
Comment:

Dear air rescources board,

It is esential for our survival as a nation and a viable economy to break our dependence on foriegn oil imediately.

the electric car has been around as long as the gasoline car and is just as every bit as viable as a reliable means of transportation.

by continuing our reliance on forign oil, we collectivly are putting our nation at great risk, with the volitilitality of the source and price's of the oil based economy we now are dependant on.

just the price of gasoline and diesel fuel alone have had a tremendously impact on the the working public, from simply getting to and from work, right down to the price we pay for goods at the market.

the cost ecologicly is astronomical, and the damage is very bad.

electric vehicles are low cost to buy or make low cost to run, and low cost to maintain.

the american public middle class is suffering tremendously. the cost of fuel has all but eleminated the middle class.

we need electric vehicles, and we need them now!

Sincerely,

Michael Eric Martin

Subject: Save Our Children's Air
Comment:

On March 27, the California Air Resources Board will revise the history-making program that put more than 5,000 Zero Emission Vehicles (ZEVs) on the road.

But their staff has issued a proposal that, instead of propelling our country ahead toward a pollution-free future, will profoundly weaken the program once again. This proposal would require automakers to produce only about 150 ZEVs each per year through 2015—which amounts to less than what these influential regulators mandated in 2003.

Please urge the Governor to ask the board for a stronger proposal that puts more ZEVs on the roads, and helps move California toward the future.

Subject: ZEV2008
Comment:

Please do not reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014. Let's stick with the original amount of 25,000 ZEVs, allowing for more choice and less CO2 and other greenhouse gasses.

Additionally, a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs would go a long way to keep California beautiful and at the front of the pack when it comes to protecting our natural resources.

Thank you very much!

Comment:

Dear CARB,

I want to say that cleaning up the air is a hard task and I commend you for your efforts. I would like to add that I am convinced that ZEV technology will better suit the needs of California and it's future. I teach sixth grade and we cover greenhouse gases. Most of my students say they(their parents) would purchase a ZEV if they were available and at a reasonable price; everyone can't afford the Tesla like the Governor. I am looking into a new vehicle next year, if not sooner and would definitely buy a ZEV to show my students that I care. Many of my students suffer from one type of breathing disorder and are medicated. I realize that I am only one person but I hope you consider the many children that I teach over the years. They are the future and we need them healthy. Please let the ZEV live and thrive.

Sincereley,

Subject: March 27 EV Proposal
Comment:

To whom may be concerned:

This letter regards the upcoming proposal to substantially reduce production requirements of EVs on auto manufacturers. It is quite possible that I have not taken the time to adequately understand the challenges associated with this decision, and I would be happy to gain more insight into the complexities of this situation.

From the inside outsider's standpoint, so qualified because I am a professional in the light EV world, I cannot understand why California, which has led the way in so many progressive environmental initiatives, would continue to reduce production requirements when the EV technology has already been proven and for which there is high demand.

Is it because the State needs to make concessions in order to gain more leverage for CAFE standards? Is it because the State is worried about the load demand on its strained existing electrical infrastructure? If so, would such a smaller number increase the demand and adoption rates to the point where the utilities could not respond in time.

Perhaps these are not at all concerns or are only peripheral. In any case, I know that I am not alone in failing to understand why it makes sense to so drastically reduce (rather than increase) these requirements that have been placed on auto manufacturers (and largely removed).

As part of a public institution, I imagine that you all would like to have public support. If I am incorrect in this assumption and the Board would prefer to stay above the plebeian concerns, so be it. Otherwise, some better information to support what is being circulated as the Board's current direction would be much appreciated by a large number of Californians.

Thank you for your time in consideration (and perhaps response).

Sincerely,

Mitchell

Comment:

I am asking that you help California to adopt the MSV regulation that Oregon, Montana and Washington has adopted. There is an incredible interest in NEV-class transportation in California. I am in Los Angeles and have purchased a ZENN from Environmental Motors in Glendale (www.environmentalmotors.com) and I can tell you that when I drive it down the street, I get stopped EVERY TIME by people asking me about the car (how much it was, how fast does it go, do I like it, where can I get one, etc). In general, the public LOVES my car because it small, it makes no noise, and it releases no emissions.

Subject: Electric Vehicles Drive 35

Comment:

Automobile emissions play a significant role in air pollution in the Los Angeles region. By allowing electric vehicles to take to the road at 35 mph (or higher) Los Angeles could provide a valuable tool for reducing emissions and an alternative to costly public transit infrastructure investment (read : the subway to the sea.) Personal commitment to clean air can only create real change if individuals have effective tools and alternatives.

Subject: 35 MPH

Comment:

I've driven a NEV for five years. The 25 mph speed governor is actually very dangerous. When I'm driving on a 35 mph street the cars get backed up behind me and then fight to get around. I pull over a lot but because of the situation I'm considering getting rid of it.

No other cars or motors cycle have the same kind of restriction. Driving safely is left up to the operator of the vehicle. Some motor cycles go 180 mph which is defiantly no safe.

35 mph for NEVs or low speed vehicles is a workable speed. I hope you can see the importains of this.

Best regards,
Robert Feist

Subject: 2008 ZEV Regulation

Comment:

On March 27, the California Air Resources Board needs to put in place a strong proposal that puts more ZEVs on the roads...not the weak watered-down version that would require automakers to produce only about 150 ZEVs each per year through 2015—which amounts to less than what you mandated in 2003!

As is often the case, several other states will look to California and adopt your regulations concerning clean air. We are running out of time, and can't afford to be lax on this matter through the year 2015. I urge you, for the sake of the earth (and for our children and grandchildren), to please do what is right and force the automakers to bring the electric car back in much larger numbers...the only way to stop our slide down this slippery slope of irreversible global climate change is to act NOW.

Respectfully,

Brent Lucas

Subject: We Need Electric Vehicles

Comment:

Electric vehicles are a source of clean, zero-emissions power. California is one of the most polluted states, as it is home to many urban areas. California needs a clean, reliable, and available form of transportation. Electric vehicles are all of these. Electric vehicles firstly can be powered from renewable energy such as wind or solar making them virtually produce zero-emissions. Electric cars are also reliable- they only have ONE moving part, do not need smog-checks, oil changes, etc. Electric cars also, unlike hydrogen which is still in development, electric vehicles are an available technology (see EV1 and RAV4 EV). Lastly, we aren't sponsoring destruction of environments that occurs when searching for oil- we must reenact a electric vehicle mandate! Thank you for your time.

Subject: Do not kill CARB!

Comment:

I am greatly disturbed to learn that you are considering weaking CARB based on grossly false assumptions. There several Battery Electric Vehicles (BEV) under development, and Tesla Motor is even in production. BEV are the only 100% emission free technology and the only that can directly benefit from electricity generated from sustainable alternative energy, such as wind mill production and photo voltaic, both of which are readily available today.

Please consider instead strengthening CARB for the good of the environment and the California industries.

Respectfully,
Tommy

Subject: Zero Emissions Vehicles are Already Here

Comment:

I am writing to urge you not to weaken the ZEV requirements as proposed in the February 8th initial statement of reasons (ISOR). The state of battery technology is indeed such that battery powered electric vehicles are a possibility. In fact, they are already being produced and the demand far exceeds supply.

Tesla Motors of San Carlos has been developing a lithium ion powered electric vehicle since 2004. Even with minimal funding (by automotive industry standards) and little automotive design experience, they have succeeded in bringing their Roadster into production this year. Reservations currently exceed 1000 cars, and most of the orders were placed by people who have never even driven the car.

Think about that -- the idea of a capable zero emissions vehicle is so compelling that people are willing to place full price deposits on a new car from an unknown manufacturer without even test driving it.

Don't let the big auto lobbies weaken the ZEV mandate again. The technology exists and the demand is enormous. Now is the time to take action.

Comment:

March 24, 2008

Mary Nichols
Chairwoman
Air Resources Board

It is my opinion that the car manufacturers are supply all of the no-emissions vehicles that the public demands. The marketplace must set the demand. It is not up to the state to force consumer behavior. If I wanted a no-emissions vehicle, I'll bet I could have one in less than a week, maybe even the day I stepped on to a dealer's lot. I prefer to own vehicles with a little more power than can be found in no-emission cars. Further, I have a need to tow a trailer and the little cars simply are not able to do that.

Please let the public decide what they want.

Subject: Zero Emissions Vehicles
Comment:

I wish to urge you to do everything possible to make zero emissions vehicles available to the public. In particular, pure (not hybrid) plug-in electric cars are extremely efficient and produce no emissions. It is regrettable that CARB's reversal of its Zero Emissions Mandate in the past resulted in the major car companies canceling their EV programs and even taking back leased EVs from people who wanted to buy them--and tragically crushing perfectly good cars. It is incomprehensible that cars that were created to solve environmental issues were wastefully destroyed before their life cycle came to an end.

I know from first-hand experience that people want EVs. I made the commitment--I own and drive an electric car. I was one of the lucky few who was able to get one. It wasn't easy to get one, but I want to do my part to make our air cleaner and reduce our reliance on foreign oil. I am constantly asked by strangers who see my car where they can get one. I want there to be options for these people. Why shouldn't there be options? Why shouldn't people who want zero emissions vehicles be able to buy them? And buy them today--not ten years from now. We cannot buy promises, which is all we seem to get from the car companies.

The public is ready for green choices. The major car companies have demonstrated that they can produce quality EVs. We need legislation so that the car companies will provide options other than large SUVs that they created demand for. If they want to sell cars larger than the public needs, they should at least give us "green" options as well so the public can decide.

California's environment is in your hands. Please use your votes responsibly and for the good of all Californians.

Thank you.

Sincerely,
Linda Hopkins

As a concerned voter I want to express my opinion to NOT relent or relax on ZEV requirements for automakers. As CARB, it is your responsibility to hold accountability and make sure that large automakers make ZEV for everyone. Thank you.

Creating a new class of electric vehicles, MSV, 35-mph vehicles, will open a market to millions of people for millions of MSV electric vehicles.

Apollo Energy Systems, Inc. strongly recommends to the California legislature that the MSV class of EV be established for California. It will greatly help to reduce emissions from internal combustion engine vehicles, and will reduce noise pollution.

Comment:

Pure ZEVs are being produced NOW in California for Californians. I will be receiving my Tesla Roadster in just a few short months. As gasoline is teetering at the \$4 per gallon mark, while our soldiers continue to DIE in Iraq as they fight over the last 20 years or so of oil LEFT IN THE WORLD, while hundreds of thousands of innocent Iraqis die so that I can drive my gas-guzzler to work, now is not the time for CARB to reduce pressure on the big automakers to deliver pure ZEVs.

Correct CARB's mistake from nearly a decade ago and do not penalize a California ZEV manufacturer and employer at the same time. Let's stop our addiction to foreign oil now.

sincerely,
David Kaczmarek

Subject: Zero Emission Vehicle Regulation
Comment:

Sirs/Ladies,
We have waited too long for car companies to clean up their act voluntarily. With recent improvements in battery technology, and the successful development of electric vehicles such as the Tesla Roadster and the Phoenix SUT, there is no longer any excuse to delay the implementation of mandates for cleaner vehicles. Clean cars are possible, and if two California startup companies can do it, why can't GM, Ford, and Toyota?

I believe this is one issue that a majority of voters, both Democrat and Republican, are united on. We are tired of excuses for why these cars are not available. We landed a man on the moon in 10 years, for God's sake, why can't the major car companies make a zero emission vehicle? We are also tired of paying our hard earned money to Middle Eastern terrorists, and greedy American oil corporations. What will the price of gasoline have to be before our representatives spring into action and demand an alternative? Finally, we are no longer interested in whether or not global warming is for real. It doesn't matter. What does matter is that clean cars equal better health for all of us. Isn't that reason enough to do the right thing?

The question is, does C.A.R.B. represent the people of California, or does it represent the automobile industry? If you believe the latter, my question to you is what is your reason for existence?

I urge C.A.R.B. to maintain (or increase) the current mandate for zero emission vehicles. Whatever you do, please do not weaken it.

Thank you
John Landwehr

Subject: Support ZEVs by embracing recommendations from actual ZEV manufacturers.

Comment:

I am disappointed to hear that the CARB is poised to make changes to the ZEV Mandate, outlined in an extremely faulty Initial Statement of Reasons dated Feb 8, 2008. It is downright bizarre that the ISOR states that "staff doesn't anticipate that manufacturers will produce any battery EV prior to 2012" when in fact battery EVs are on the road today, ranging from commuter cars like the Tango and Sparrow, to the Tesla Roadster.

I hope to see the ISOR's recommendations rejected. Please help support manufacturers that are actually commercializing zero-emissions technologies for transportation, and put pressure on the laggards in Detroit.

Comment:

Dear Members of the Board:
Your staff is apparently misinformed about the short-term viability of requiring larger numbers of ZEV's. Not only are American automakers now producing ZEV's, but several more progressive foreign firms are doing so as well. Moreover, because the big companies have just a little fear that you won't let them off the hook, all of them have ramped up research and are quite ready to bring several viable models to production IF THEY HAVE TO. When the world's big automakers testify that they cannot do this, they are simply untruthful, and their own concept cars and showcased working prototypes reveal their two-faced approach. It is an insult to the genius of American automotive engineers to say that they cannot meet this challenge. Remember that they brought out a perfectly fine ZEV when they had to, but when litigation let them abandon it, they did so immediately.

Comment:

I have an all electric vehicle and the ZEV program DOES WORK. We need many more of them. The oil suppliers are rich enough off of our hard earned dollars. I also have a habit of needing to breathe air-clean air!

On March 27, the California Air Resources Board will revise the history-making program that put more than 5,000 Zero Emission Vehicles (ZEVs) on the road.

But their staff has issued a proposal that, instead of propelling our country ahead toward a pollution-free future, will profoundly weaken the program once again. This proposal would require automakers to produce only about 150 ZEVs each per year through 2015—which amounts to less than what these influential regulators mandated in 2003.

Please urge the Governor to ask the board for a stronger proposal that puts more ZEVs on the roads, and helps move California toward the future.

Subject: DON'T WEAKEN THE ZEV MANDATE!!
Comment:

Dear Ms. Nichols and CARB:

Thank you for increasing the emissions standards over the past few years, in an effort to reduce pollution.

I urge you to approve legislations that further reduce pollution, such as those that encourage auto-makers to produce ZEVs, EVs, NGVs, and PHEVs. These vehicles are gaining in popularity, but at the moment, are not affordable to most people. If these vehicles were mass-produced, they would become cheaper, encouraging consumers to chose clean vehicles over conventional gas cars.

Please up the standards for enhanced-AT-PZEVs to 25 miles on pure electricity. I encourage you to require 10,000 EVs to be produced by each car manufacturer in California in phase II.

When requiring new low-emission technology, please do not replace alternative low-emission and zero-emission technology; replace older, less efficient technology.

DO NOT WATER DOWN THE ZEV MANDATE ANY MORE!!!

We need EVs, especially with gas prices rising the way they are.

Please make the right decision on the 27th, and help clean up California's air!

Thank you for your time and effort,
Colby Trudeau

Comment:

I build EVs in Colorado. I always think how nice it would be to have the support of an organization like CARB here. With the state of the world and the present political climate CARB and California must hold the line on progressive clean energy policies. We need ZEVs and feed-in tariffs and support for renewable energy and clean non-fossil fueled transportation everywhere in the world. Switching from ICE vehicles to EVs is twice the efficiency gain of changing to CFLights. EVs give the owner ten times the Miles Per Dollar (MP\$) of gasoline vehicles. EVs are good for the economy especially if powered with local PV. Don't let us down.

Hi,
I urge you to carefully consider what the passage of this proposed legislation will do.

I am a happy owner of a ZAP ZEBRA car since Sept 2007-
With the high price of gasoline weighing heavily on our minds
these days and the effect of leaving a carbon footprint for future
generations of humankind we must do everything in our power now to
raise global awareness of our use of fuel.

By not allowing the consumer the freedom to make their own
globally conscious green effort, you will be denying the future
just like the bad decision that GM made in the early 1990's to
only lease the EVs and then take them all back!

We need to put power and energy alternative resources back into
our grids and not rely on gas as a means to an end--

Allow the consumer to buy EV and buy smart as we are investing in
our future!

Thank you,
Stu Jersky - a happy EV owner!

Subject: Wise saying...!
Comment:

Have you never heard the saying: "Fool me once, shame on you; fool me twice, shame on me"?

According to that sage bit of wisdom, the CARB staff should be ashamed of themselves. The oil companies and car manufacturers fooled them in 2003, when they convinced them to dilute its ZEV mandate with the promise that hydrogen cars were "just around the corner" --thus killing the electric car.

So... where are those promised hydrogen vehicles?

NOW they are again trying to pull the wool over CARB's eyes by touting yet another substitute: a promised increase in the number of hybrid vehicles.

We need ZERO-emission vehicles, not just REDUCED-emission vehicles. And the irony is... we already have the technology in the form of EVs! Indeed, we already had it back in 2003!

Tesla (with its Roadster), Subaru (with its R1e and G4e), Mitsubishi (with its iMiEV and iMiEV Sport), Think (with its City and Ox), Aptera (with its Typ-1 EV), Phoenix (with its SUV and SUT) --to name only a few-- are obviously capable of producing reliable, dependable, clean EVs. Why can't the major auto manufacturers?

Contrary to your staff's report, the batteries ARE reasonably priced, are becoming cheaper every day, and thus pure EVs are indeed more affordable than ever before, depending upon the model: Tesla at the high end at \$92,000 for a Roadster, and Aptera at the low end at \$26,900 for a Typ-1 EV. BOTH companies are in California, by the way!

In short, instead of reducing the required number of ZEVs by 2012-2014 by 90%, CARB should INCREASE it by 200%!

DON'T BE FOOLED AGAIN!

Subject: ZEV mandate
Comment:

Dear CARB,
Please mandate the production of battery electric vehicles by the major car companies. The original ZEV mandate was a monumental step toward cleaning the California air and helping to curb our addiction to foreign oil. The auto makers have claimed that hydrogen is the best alternative fuel but we need ZEVs NOW, not in 10 to 15 years. If the auto makers would like to switch to hydrogen when it does become economically feasible and is a better alternative to battery electric vehicles, so be it. In the time being, it is imperative that they use CURRENT technology to produce ZEVs now. Please reintroduce the ZEV mandate without falling victim to automaker and oil lobbyists. Thank you for your consideration. I trust that you will make the right decision for the future of our great state.
Sincerely,
Philip Anderson

Comment:

Dear CARB,

Please do not change ZEV mandate and let the major automakers off the hook AGAIN! CARB reputation is already eroding since 2003 for allowing the industry to strong arm California and its citizens. We need the auto industry to put the cleanest autos on the streets with EXISTING technology, and not allow them to once again undermine the real reason for having ZEV regulation - ZERO-Emission Vehicles, and clean air.

It is not enough to put "sort-of" clean vehicles on the street when they can put Zero-Emission vehicles in the forms of Battery Electric, or Plug-in Hybrid, BOTH of which, the technology exists TODAY. Many auto companies already have BEV and PHEV under real world tests. There is no reason left to wait. The staff's recommendation is already six months OUTDATED in terms of battery technologies--they are MORE than ready. If the current automobiles companies keep saying they cannot, then allow and encourage innovative companies like Tesla Motors, and Phoenix Motorcars (both based in California), who have ALREADY proven that it IS POSSIBLE with production or pre-production ZEV vehicles on the steets, the chance to succeed. Allow Californians to have a choice.

I am a Californian, who just installed Solar Panels at my house in hope to help further the cause of cleaner air. I'm doing my part, but I need affordable BEV or PHEV to continue to do what I can for cleaner air.

As a Californian, I'm doing my part. As an organization for the benefits of Californians, CARB must do its part on our behalf. Don't let the auto industry de-rail ZEV requirements again. The mandate must push for the adoption of ZEVs, especially with technonogies that is READY, and EXISTING. ZEV is more than clean air. ZEV is a change in policy that can significantly improve energy efficiency and independence, reduce pollution and begin to move us from the impending complex issues of oil, and global warming all at once!

Sincerely,

Quyen Ton
Tustin, CA

Comment:

California leads the way. It is in your hands to force the companies that will not do things on their own to do what is right. The right thing to do is to mandate that automakers must create an abundant number of electric and fuel cell cars. There is huge profit to be made by these companies, and the ones who don't want to comply will fade away as demand shifts. Thank you for doing the RIGHT thing.

Ben Weiss

Comment:

CARB - The ZEV rules are mind-boggling. I could not come up with anything more complex if I wanted to. What does Partial ZEV means? Zero means zero. There should be no PZEV and any of the variants. The credit system is also overly complex. Can you fix this? I'd like to see a better use of my taxpayer dollars.

Subject: Please don't water down the ZEV credits for BEVs

Comment:

The general public is increasingly aware of the lack of fortitude within CARB when it comes to encouraging transition away from legacy entrenched industries. Please do not let the ZEV credit program continue to be tarnished and wasted when you have an opportunity to let California lead the way into the next generation of vehicle technology.

Solar charged electric vehicles provide emissions free solutions that can work now. Please encourage vehicle manufacturers to offer Californians the opportunity to buy pollution free, quiet vehicles we can recharge from our home solar systems. The ZEV credits are a meaningful way to jump-start the industry as auto grade battery technology can become cost effective and head towards mass production with the extra push you can provide.

Thank you for your time and consideration.

Subject: Amendments to the 2008 Amendments to the California Zero Emission Vehicle Regulation

Comment:

I was a big supporter of the Zero Emission Vehicles that were available in the late '90s and early 2000's. They were safe, dependable, fun to drive, and produced zero emissions!

Where are they today? What happened to them? The answer is changes to the CA Zero Emission Vehicle Regulation.

The technology exists; actually it is old now, and there is no reason why electric vehicles should not be available for purchase or lease TODAY.

Do not put off the only alternative fuel technology that has actually been proven. No more pork barrel "ethanol" scams. We need to take seriously the effect of burning fossil fuels on our health, communities, national security, and planet.

Please do not extend or alter the requirements for Zero Emission Vehicles. We need these vehicles on the road, the time is NOW!

Thank you.

Comment:

I am a California citizen of over 30 years and was shocked to learn that the CARB, an institution I believed to be working in my best interest, has neglected its duties by not enforcing tougher mandates on car manufacturers to move towards better automobiles that pollute less and lessen our dependency on foreign oil. You are here to serve the interests of California citizens and not Detroit, Japanese, German, or other foreign car manufacturers. These companies make billions of dollars and have all the resources available to them to build an alternative to current oil dependent vehicles. Don't be fooled (or bribed) by their lobbyists and stand up for our rights to a cleaner California.

Thank you,

Tuyen Vo

Subject: CARB hearing on ZEV
Comment:

Dear CARB,

PLease make sure that people can be free to drive electric cars by mandating that electric cars are required in volume of 25,000 vehicles or more. Right now we are at a critical juncture where we have the opportunity to promote electric cars for the future. We must not pass up this chance to help reduce harmful pollution, and free ourseves from having to buy oil and other oil products. Let's not make the same mistake that Alan Lloyd made several years ago by letting ZEV mandate slip away. Battery technology is excellent now and prices continue to drop for advanced batteries. EElectric cars are fully technologically capable with their gasoline counterparts. SO let's require these vehicles to be used in California.

Thanks,

Chris Pierce

Subject: Zero-Emission Vehicle Mandate - Keep the Numbers Up

Comment:

Let's keep the Zer0-Emission Vehicles numbers up as the best way to reduce pollution, sustain the earth and keep greenhouse gases in line. I'd like choice -- choice between pouring in gasoline which does zilch and plugging in which moves us forth towards a reliance on American electrons and off of the more polluting OPEC molecules.

Recommend that the OEM be encouraged, in fact, to exceed the 25,000 ZEVs, far earlier than 2012. At the NYC Auto Show, there were four EVs being shown. It's possible. And this is not even counting PHEVs. And PHEVs should be in a separate class for replacing the polluting'est cars and trucks in the CARB regulations.

Let California lead the States, the Nation, the World in having the Future as green & clean, sustainable -- the Future is Electric!

Subject: Z.E.V.'s

Comment:

Dear Sir/Madam,

I was dismayed to today learn of the proposed changes to the Z.E.V. mandate, which fly in the face of both public opinion (I suspect) and economic prudence. A cursory examination of the field will reveal that the production of 'pure' E.V.'s is moving forward at unprecedented pace, and moreover that it is Californian firms (notably Tesla Motors) who are currently at the forefront.

Big auto are well aware which way the wind is blowing, and that internal combustion (which is after all 100 year-old technology!) is on the verge of being superceded. Farsighted public policy now will ensure huge future competitive advantage for the state of California when the tipping point is reached, which, although difficult to imagine, may be as little as 3-5 years from now.

Aside from the unrivalled green credentials and international attention this would attract, it would be prudent to nurture what will be among the 21st centuries largest industries.

Yours Faithfully

Adam Merza

We need MORE electric vehicles, this gives the public more options. I knew someone who had the previous version of a Ford Ranger that was all electric. It worked well, he loved it and had a hard time giving it up. As an American, are we not allowed to have the best choices that our companies can offer? Is this not the time to look at these options? I do drive a fuel efficient vehicle, however even that is becoming costly. Please vote to maintain and increase the technology in using the electric cars. If a company, not American, choses to develop this technology, they will be getting my dollars. So, for the sake of our drivers, economy and our environment.. please vote to keep and increase the numbers of these vehicles!

Maria Tello

Subject: Support for PHEVs and ZEVs

Comment:

Many time I have heard speakers from the major automobile manufacturers make the claim that they are only building what consumers demand. First off, the consumers are buying what the manufacturers are promoting the most - there are as many as ten times the number of television advertisements for light trucks and SUVs when compared to the number for cars. And why not, since the corporate profit may be thirty times greater for an SUV than a small car.

Secondarily, but more importantly, the large manufacturers are shirking their responsibilities to the people of this country and planet by not taking a lead for better technologies - for the good of all. The manufacturers hold the knowledge, with their many experts, of the technologies that will serve the world better in the long run. It is irresponsible to claim they are only following the market when they make the market. They are large enough to control the direction of the market place and the technologies. Short term profits are their guide.

I have been told by one automobile manufacturer's representative that the small development companies create problems since we are not spending millions and taking years to fully test and certify our technologies. Yet, the small innovators are where the technology catalysts are coming from. Since the major manufacturers refuse to lead, small companies need to be given the regulatory freedoms and financial incentives to move the earth friendly technologies forward, for the good of all.

I am in support of any regulatory changes or incentives that will allow more technological options to be tested on the roads of California and the other CARB states, and expedite the adaptation of clean transportation technologies in mass produced vehicles.

Subject: Please do not weaken ZEV targets
Comment:

Hello,

Zero emission vehicles are the first step in breaking our dependence on oil. Weakening requirements for the number of these vehicles shipped will substantially delay the day we can be free of the need for oil.

There are already companies producing fully electric vehicles that are leading the way for the large automakers who have opted to rely on their lobbyists to maintain the status quo. Zenn and Tesla are both producing fully electric vehicles. If these startups can do it why can't the large automakers do so as well?

I do not see how reducing the already delayed and weakened targets will be conducive to maintaining pressure on the larger and more established car manufacturers.

Chris

Subject: Please Strengthen the ZEV Mandate
Comment:

We all share the air. From your own website:

"A number of technological innovations have resulted from the ZEV mandate. Automotive breakthroughs such as hybrid . . . vehicles, and cars free of evaporative emissions are now realities as a result of efforts to meet ZEV requirements. ZEVs have won over a large number of supporters who like the quiet ride and efficient operation of zero emission vehicles.

In addition to eliminating tailpipe and evaporative emissions, ZEVs also reduce greenhouse gases and toxic emissions. Dependence on petroleum products and the emissions associated with drilling, refining and transporting those fuels are also reduced with ZEV technology."

I am one of those happy electric car drivers. I like knowing that my car pollutes less, and relies on domestic energy not subject to the whims of OPEC. This is a national security issue as well as a step in the right direction toward mitigation of climate change.

Every day strangers approach me and ask, "How do I get one of those?" I have to tell them it's not easy, but that perhaps our wise government officials will find the strength to face down the oil companies & automakers in order to do the right thing for our society, with a little public encouragement.

Please do the right thing, we'll back you all the way!

Subject: Save the electric car & our air quality

Comment:

On March 27, you will be revising the history-making program that put more than 5,000 Zero Emission Vehicles (ZEVs) on the road.

Your staff has created a proposal that, instead of propelling our country ahead toward a pollution-free future, will profoundly weaken the program once again. This proposal would require automakers to produce only about 150 ZEVs each per year through 2015—which amounts to less than what these influential regulators mandated in 2003.

I urge to go for a stronger proposal, putting more ZEVs on our roads, and helping move California toward the future.

Subject: Do not weaken the ZEV Mandate
Comment:

Do not weaken the ZEV Mandate

Pure ZEVs are being produced NOW in California for Californians. It is impossible to believe that they are "not practical" given that I have driven one and expect delivery of mine in the next 6 months.

With all of the growing awareness about global warming, why would you choose this moment to weaken standards? Clearly the public mandate is to strengthen the standards and to entice automakers to accelerate their ZEV development. The ONLY practical ZEV technology at this moment in time is based on LiOn batteries.

Correct CARB's mistake from nearly a decade ago and do not penalize a California ZEV manufacturer and employer at the same time. Let's stop our addiction to foreign oil now.

sincerely,
Jon Mittelhauser

Subject: CARB Must Not Weaken ZEV Mandate

Comment:

CARB Staff,

We want ZEV's... no, we NEED ZEV's. If you weaken the ZEV mandate you make a mockery of (and invalidate) CARB. You exist to push the automotive giants to do the right thing. If they were willing to do it on their own, we wouldn't need you... but they are not, and as a result we look to you. If the automotive giants are not willing to do what must be done, then let Aptera and Tesla motors pick up the reins. The world is watching... the right path is seldom the easy one.

Thank you for your time,

Russell Adams

Subject: ZEV2008
Comment:

Dear Decision Maker,

I have been a California resident all 19 years of my life and I love the Golden State. I want to have children some day and have them experience and enjoy the beauty of this state as I have done and still am doing. My fear however, is that given a few more years and they way we are polluting our environment, California will start to rapidly loose it's golden glow. We are amongst the most heavily populated state in the U.S. and therefore have an incredible power to make a change for ourselves and our future generations. The biggest way I can think of to help the environment as quickly as possible is supporting the ZEV2008. I realize it is a big order to fill but it is more necessary than some care to see. This bill will significantly improve our environment, and I would like to see that happen in my home and all over the state. Please stop thinking about the right now profits for the already wealthy car companies and think about your children and future generations to come...think about what you want for them and use your power to make it happen and help millions of Californians. Thank you for your time.

Sincerely,

Kendra M. Sato

Subject: Zero Emission Vehicle Regulations

Comment:

Carb needs to be strengthening ZEV standards--not weakening them. It is in the public's interest that auto manufacturers produce far more of these vehicles than they currently do, so that consumers can choose to make an environmentally responsible choice (if they are so inclined) related to the type of car they purchase. Fully electric and hybrid technology makes far more sense than hydrogen vehicles, and these technologies are currently available and commercially viable (unlike hydrogen). The public desperately needs your leadership on this issue to compel automakers to give consumers real choice by providing far more zero emission vehicles and more choice regarding the types of these vehicles available for sale. Thank you for considering my comments.

Comment:

Please do not retreat another step in implementing Zero emissions regulations!
While I applaud the new requirements for the "Enhanced AT PZEV" category, it must not infringe on the demand for your mandate, ZEVs. You have given the auto manufactures too many concessions in time frame and quantities. At the current rate, by 2014, we will have only 3% of the original number of ZEVs mandated by 2003! If you cannot stand firm, you have no business negotiating on behalf of the people of California.

Increase the number of ZEVs!

Thanks,

John DeLand

Subject: Zero Emissions transportation

Comment:

It is critical for California to take a leadership position in making zero emission transportation available as an alternative to fossil fuel driven vehicles. Zero Emission personal vehicles are a good step in this direction. You must, however, increase the availability of these vehicles by forcing auto manufactures to make more vehicles available for sale in California, not fewer. Mandating production of more of these vehicles will have an effect on every state in the U.S. and go a long way toward controlling the emissions of greenhouse gases and reducing our dependence on fossil fuels. Zero emission mass transit must also be increased as part of our efforts.

Subject: Plug in electric cars needed
Comment:

One of the most promising ways to reach your goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs), like your electric Tesla Roadster.

I have owned a privately converted electric car in the early 90s and am preparing to install the far more efficient batteries available now.

Plugging in at night when demand for electricity is low, these cars do a tremendous service toward clean air and less climate change. And some of us are eager to go even the greater distance by using solar power to charge them.

Please require the full 25,000 ZEVs that automakers had promised for 2012-2014 and create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Non-plug-in hybrids aren't good enough.

First Name: Eli
Last Name: Meyer
Email Address: eliameyer@gmail.com
Affiliation: Sierra Green Building Association

Subject: Do not compromise the ZEV mandate
Comment:

The mandate of Zero Emission Vehicle sales is critical to ensure manufacturers provide a cost-effective alternative to the internal combustion engine.

The quantity of ZEV's required each mfr is required to produce will greatly effect the cost and variety of ZEV's available to consumers. The technology is readily available however automakers have no reason to develop these technologies to be more cost effective unless they impact their overall profits.

Laws in California impact industry trends across the nation, and around the world. CARB has an opportunity to make a huge impact on air quality and to help reduce our dependency on foreign oil.

Please do not compromise the ZEV2008 mandate as proposed.

Sincerely,

Eli Meyer
President, Sierra Green Building Association

Comment:

Gentlemen,

We need to shift our transportation fuel from oil to electricity.

I have been following the ZEV debate for over a decade, and am disappointed at the results.

Had GM continued with their R&D trajectory with the EV1, we would have a significant number of EV's or PIHV's on the road today.

I own a Prius and a Ford Escape Hybrid. I can't wait for the day when another EV is available for sale or a PIHV upgrade is available for my vehicles.

Please do not dilute your mandate any further. Lithium Ion battery technology is within our grasp and just a few years from mass production.

Regards

Scott Winneguth

Comment:

How many more children do you want to fall ill due to air pollution?

Stand up to the car manufacturers and fulfill the protection of the 'name' of your board.

Enough is enough.

Credits only for ZEVs that are sold and not vapor ware.

Subject: Save the Electric Car!

Comment:

I have driven a 100mpg Plug-in Hybrid for about a year that I power with 60 cents of Clean Domestic Wind Energy each night to offset the amount of more expensive Dirty Foreign Oil that I need to buy.

The money I save goes to take my family out to local restaurants and shops, helping our economy, and our local tax base.

People are always trying to come up with product like ethanol, bio-diesel, hydrogen, that we would have to keep buying and I really just don't see the point in that when we already have electricity pumped to our homes each day. I've been a slave to gas pump for twenty years, and I don't want to be a slave to another type of pump for the next twenty years.

With Plug-in cars we are not moving pollution from the tail pipe to the smoke stack as some people say, because we are putting up wind turbines and solar panels faster then we are building Coal power plants, or hydrogen stations.

I will be the first person to tell you that Plug-In cars will not work for everyone. They will only work for about 98% of commuters. When more of us drive Plug-In cars we will have more money for our Communities, our Local Governments, our Churches, our Charities, and Ourselves.

Subject: Please save the electric car

Comment:

I am writing to urge you to reconsider your proposal to reduce the number of ZEVs required of automakers by 90%. Electric vehicles are the best chance we have to reduce global warming in the tiny window of time that we have to do it. Please require the full 25,000 ZEVs that automakers had promised for 2012-2014. In addition, I ask that you create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Choice for consumers means cleaner air for everyone.

Subject: Be leader in electric car advocating

Comment:

Show example of your real leadership in electric cars to every American.

Oil price has been increasing so fast that low-income workers can not afford to purchase gasoline just to go to work.

Oil cost gas car owners money to keep their cars/ trucks maintained. For example, timing belt and timing adjustments are so expensive nowadays. Is it worth?

Electric cars do not require much oil. Electric cars do not use gas or timing belts.

So we really need electric cars as our future transportations. Big Oil Companies are becoming un-Americans! Kick their asses back where they belong.

Thank you

Subject: CARB Requirements
Comment:

Dear Sir/Madam,

Is America going to continue to be held hostage by its addiction to oil? We have an opportunity with California leading the way to make auto manufacturers produce electric vehicles and produce them now. The technology is there and since most Americans drive less than 100 miles round-trip daily, there is not one reason we cannot produce an all-electric vehicle. Even GM has noticed Tesla and according to their chairman, is one of the primary reasons for producing the Volt.

Let's leave CARB as is and not push back or reduce any electric vehicle mandates.

Subject: Support for BEV and ZEV

Comment:

I work for the Canadian government, and I strongly urge you to support BEV, ZEV and PHEV. All of these concepts are good, and their results and environmental improvements are of value to not just California, but also the world. The world can no longer afford the externalizing of the costs that the OEMs have given us for years. They sell oil consuming trucks as passenger vehicles, and are then surprised at the rise of asthma in children. Now ask them to pay for the health costs of these children. We all need California to stand up to the car and oil companies. Ottawa and Washington are not doing their job, so we hope you can put some common sense back into the auto industry.

First Name: Marc

Last Name: Geller

Email Address: marc@pluginafrica.org

Affiliation: San Francisco Electric Vehicle Assn

Subject: ZEVs for America

Comment:

The San Francisco Electric Vehicle Association is strongly supportive of the Zero Emission Vehicle Program. At its best, it has created the cars that have allowed thousands, including many of our members, to drive zero-petroleum, zero-carbon, zero-emission battery electric cars. I am one of the lucky few; my Toyota RAV4 EV has driven 58,000 miles, and regularly transports me to Sacramento on one charge from my solar PV system to plead the case for BEVs. Unfortunately, the Program has lost its way. Once a program leading to the near-term commercialization of ZEVs, it has become an incomprehensibly complicated research and development program for hydrogen and fuel cell vehicles. ZEV commercialization has unnecessarily been delayed a decade or more.

The thousands of electric cars that once were driving the roads of California were mostly confiscated by their creators without rebuke by CARB or any consequence whatsoever. The credit glut and system gaming by the automakers mean a very limited number of ZEVs will be produced in Phase II. Since the 2003 revision, the program has become the Zero Zero Emission Vehicle Program as far as consumers are concerned. Many consumers want a ZEV option now. To get back on track toward ZEV commercialization, CARB must not reduce the number of ZEVs required in Phase III.

Subject: Moving from MI to CA this autumn. Please impress me!
Comment:

Dear C.A.R.B. folks,

In Michigan, I have recently noticed your t.v. ad calls to encouraging Americans to move to California. I will be making that very move this autumn--specifically, to San Luis Obispo.

I watched with interest the recent movie production "Who Killed the Electric Car." Detroit's short-sightedness infuriated me. Though not because of this, I still intend to abandon this miserable state. It has forsaken its citizens.

I hope that someday I can scoot about SLO in an affordable plug-in vehicle. Please make it happen: for you, me and all Americans!

California has been the leader of this union for many years. I hope you continue to lead trends and behavior (consumer and industrial alike) in a positive way, for many years to come.

Thanks!

Subject: ZEV Regs...
Comment:

Please support the maximum requirements for zero emission vehicle production requirements. Please ignore any attempts to reduce requirements. Detroit, other countries and companies need a push. California is a leader the nation watches and respects--please use your power for positive changes to the auto industry.

I am from northern Michigan, and for generations have watched our main industry die a slow death. I'm disappointed in Detroit and the state of Michigan. This autumn I am purchasing a home and changing careers to start a new life in San Luis Obispo, CA.

In the approaching years, I hope I can purchase an affordable, zero emission vehicle and use it to travel and enjoy your beautiful state...my new home.

I am excited for the change, and excited at the prospect that our government and the auto industry will put the wants and needs of the country and my children ahead of their own agenda.

Please understand the VERY important decisions you are championed to make on OUR behalf. We trust you will do what it right. The more ZEV's, the better!

Very sincerely,

Bill Horntvedt
Cheboygan, Michigan...enroute to SLO.

Subject: Adoption of Amendments to the 2008 Amendments to the California
Comment:

I support your agenda to reduce greenhouse gas emissions 25% by 2020. The adoption of Amendments to the 2008 Amendments to the California Zero Emission Vehicle Regulation is needed.

The best way to reach this goal is to give consumers like myself the choice to buy Zero-Emission Vehicles (ZEVs), like the electric Tesla Roadster. I am a mother and a student. I need the vehicles to be affordable as well.

Unfortunately, the California Air Resources Board (CARB) may reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014.

Please ask your appointed CARB chair, Mary Nichols, to

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Choice for consumers means cleaner air for everyone. My children and I are a part of the group of people who are affected by the air quality. It is not fair that I have to use a large portion of my finances and public resources just to breathe and stay healthy. I am tired of going to hospitals and doctors for oxygen treatments and medications. My family and I need clean air and water so does everyone else.

Sincerely,

Adrienne Bridges

Subject: California zero emission vehicle regulation

Comment:

The time is now for the great state of California to set the example for the rest of the nation. You already have a beautiful ocean, lovely topography and some of the most desirable places to live in whole country. Why not set the standard on clean air. By supporting the California zero emission vehicle regulation the state of California will be encouraging the development of green jobs and possibly make the countrywide adoption of clean air technology a reality. Please help.

Thanks

Dave Parker

Subject: zev

Comment:

I my opinion you should be totally unreasonable and say that no car can enter California until it is zev. we have plenty of cars in ca already everybody has at least one...have you tried the 91 east at 4pm or just about any other freeway. ALL new cars should be zev. until the auto manufactures make them just boycott their products. I ride a bike for long trips sometimes 100+ mi in a day the rest of the time I drive my electric Volkswagen just to do my part. this is just my .02
Bicycles or Battery electric autos are the only reasonable transportation.

Subject: Please do not weaken CARB rules!

Comment:

Please reject your staff recommendations for reducing or delaying the full implementation of the present requirements for zero emission vehicles. There are many companies coming on line or about to come on line and this momentum will be hurt by weakening the CARB rules.

Please keep up the pressure and take the recent developments with Tesla in mind. If a new, small company with far fewer resources than GM, Ford and Toyota can make a viable business from building electric cars, it follows that GM, Ford and Toyota need to be pushed more, not less.

Thanks for your time, Ian

Subject: Don't Reduce ZEV requirements

Comment:

Please do not reduce the ZEV requirements for auto manufacturers when you vote this week. The technology exists today! Reducing the initial requirement to a small fraction of what it was will only hinder ZEV development, and punish the companies who have been pursuing this technology so rigorously. We need to start ending our addiction to foreign oil NOW!

Please reject the staff recommendation for granting any reduction, delays, or reliefs in fully implementing the present requirements for pure ZEVs.

Sincerely,
Eric Cote

Subject: Please keep zero emission vehicles requirements as high as possible

Comment:

I urge you to vote this week to keep zero emission vehicle requirements as high as possible. Electric cars are in high demand with consumers - but when they are in such short supply, they become too expensive.

I am highly motivated to purchase an electric car, as are many of my friends, but they have not been accessible or affordable to us.

Please vote with your conscience and support the good of California taxpayers who will benefit from more ZEV's on the road.

Thank you!
Sheila Huettl

Subject: Save the Electric Car & Support Plug-in Hybrids!
Comment:

Dear CARB,

As Al Gore stated in his Oscar-winning documentary "An Inconvenient Truth," we are nearing a tipping point. This is not the time to hesitate but to move forward and provide both EVs and plug-in hybrids to your fellow citizens. There is demand, and there is a much stronger environmental conscience in California today than 10-15 years ago. I have countless friends who carpool and/or drive alternative energy vehicles. Personally, I am putting extra solar panels on the roof this year to be able to plug in an electric car or plug-in hybrid as soon as I can buy one.

Please make the right decision and vote to keep the EVs coming!

Thank you,

Anna Striedter

Subject: Don't make the same mistake twice

Comment:

Unlike past moves toward making ZEVs and electric cars a mass-market reality, we have a real chance at moving green technologies forward now. Major corporations, politicians and even Wall Street have all jumped on the band wagon because it's much easier to see what the end result will be in the near future if we don't.

Please don't play economic or political games with such important technologies. ZEVs need to become a mass-market reality within the next 10 years and the actions you take today could help to determine if that happens. Please give ZEVs your full support.

Thank you,
David Garrett

Subject: I support electric car programs

Comment:

I strongly support efforts to require auto makers to offer electric only and electric/gas hybrid cars with plug-in options. I feel so strongly about this that I refuse to buy a new car until I can at least buy a plug-in car that I can recharge with electricity from solar panels on my roof.

It is time for California to step up to the plate in weaning us off from oil dependence. California is a sunny state, and we should be forerunners in demanding that consumers be provided with electric car options. Please provide the strongest possible funding for electric car programs and legislation that demands that electric cars be made available.

Comment:

Hello, We were shocked and appalled to hear that your CARB chair
Mary Nichols, wants to CUT the ZEV program by 90%!

SHAME ON MARY NICHOLS!

SHAME ON CARB!

That is the kind of backward insanity that drives this nation into
the ground. We need to move forward, not backward to improving air
quality, and all around quality of life for everyone and all
generations after us.

It just seems that Ms. Nichols is in the carmakers or gas
corporations back pockets. Does she get some sort of kickback
from this type of stupidity, or just kicks?

We need the maximum amount of CLEANER vehicles being built and
sold, on the roads EACH year, not filthy, gas hogs!

SHAME ON EVERYONE AT CARB WHO ENTERTAINS GOING BACKWARD INSTEAD OF
FORWARD!

Thank you

Subject: Increase Electric Vehicle Production in the ZEV Mandate
Comment:

I insist you consider sending the ZEV mandate back to staff to regulate auto makers to increase the numbers of electric ZEVs they are required to produce. Also, and very importantly, staff need to understand and recommend that plug-in hybrids should be seen as replacements for the dirtiest cars rather than competing with 100% battery electric vehicles.

Having more electric cars on the road is very important to me as I have grandchildren, one of which uses an inhaler to help him breathe. I don't want my granddaughter to suffer in the same way.

The only thing that has changed in our community is tremendous growth, and with it 2.5 cars per household. Our air is nothing like it was just 10 years ago. It is much dirtier. Consumers need a choice in the showroom so that we can all participate in cleaning our air.

Thank you -

Subject: Do What Tax Payers are Paying You to do, Protect the Environment, with ZEV Program

Comment:

Your proposal to cut the number of "pure" zero emission vehicles currently required in the ZEV program by 90 percent, would slash the number of such vehicles on California's roads from 25,000 to 2,500 between 2012 and 2014.

Why would you even consider a proposal which would significantly weaken the ZEV program, making it more difficult for California to meet its goal of cutting global warming pollution 80 percent by 2050.

Stop contributing to the pollution of this State and do the Right Thing.

That's what Our Hard Earned Tax Dollars are paying You to do, Protect the Environment.

So far your efforts are a waste of our money. I'd rather burn it, than Pay the salary of Useless people.

Subject: ZEV Mandate - increase electric vehicle production

Comment:

Dear Sir or Madame -

CARB staff need to ensure that battery electric technology has the strongest requirements behind it to make auto manufacturers produce as many electric vehicles as possible. It is the only viable, near term technology to address global warming and meet standards in AB 32. So many electric vehicles are on the road today serving their drivers well. Please make sure plug in hybrids with significant zero emissions range are treated equitably as well and in a category to replace the dirtiest cars rather than compete with 100% battery electrics.

Subject: Strengthen the requirements for the Zero Emission Vehicle Regulations

Comment:

Do not let this opportunity be wasted. Do not let this resolution be diluted by influences concerned only with their own profits. Zero Emission Vehicle Regulations need to be strengthened, not weakened. The electric car, EV1 by GM, was a huge success, and removed from the market before it could make an impact. Don't let this happen again. See "Who Killed the Electric Car" for further information.

Subject: Electrical cars

Comment:

It is very simple: we need electrical cars to reduce emissions and fight global warming. You, as public officials, need to do your duty and vote in regulations that serve THE PUBLIC, not big companies in other states. The initiative needs to come from YOU -- the auto companies' history has amply demonstrated that they will introduce progressive changes only if politically or economically pressured or sued. So pressure them!

Comment:

I would hate to see the board weaken the ZEV program for electric cars, as a father of 2 young children, one of them with asthma, I care very much about air quality in California.

I believe that much more stringent air quality measures should be taken, strengthening the ZEV program would be an important step.

Thank you for considering my comment.

Subject: California Zero Emission Vehicle
Comment:

Dear Chair Nichols and members of the California Air Resources Board,

I strongly encourage you not to decrease the number of zero emission vehicles that are required under California's zero emission vehicle program. Air pollution, global warming, and America's addiction to foreign oil are all real problems that can be alleviated by new automotive technologies and California should be taking the leadership in this area. Please maintain the number of vehicles on California roads that should be emission free.

Thank you,

Richard Takagi

Subject: Zero Emissions Vehicles

Comment:

The California Air Resources Board will soon revise the history-making program that put thousands of Zero Emission Vehicles on the road.

But it has issued another proposal that will pointlessly weaken the program again, and would require car makers to produce only about 150 ZEVs a year through 2015—which amounts to less than what regulators had already mandated in 2003.

Please urge the Governor to ask the board for a stronger proposal that puts more ZEVs on the roads, protects the environment, and reforms our oil-dependent economy.

Subject: Vote for ZEVs

Comment:

CARB staff proposes to delay again, by cutting the target in 2012 from 0.4% to 0.04%. The new target does not even approach the number of vehicles you have previously shown to be possible. Today we have better technology and significantly raised consumer awareness, so there is no excuse for this backsliding.

I ask that you put 25,000 pure ZEVs on California's roads between 2012 and 2014. If that is one fifth of the 1998 goal, but at least it is a start. Staff's proposed 840 vehicles a year is not even a start; it is an insult. You must do better. Please don't allow the Zero Emission Vehicle (ZEV) Program to backslide by giving up 90% of the ZEVs promised by automakers and settling for only 2,500 vehicles from 2012-2014. We need ZEVs, and we also need plug-in hybrids. More options for consumers mean cleaner air for everyone.

I ask you to (1) re-commit to the full 25,000 ZEVs the automakers promised, (2) create a separate requirement for plug-in hybrids that lets them replace dirtier vehicles, and (3) provide incentives for plug-in hybrids that have the most on-board electricity storage. The technology is ready today and has been proven by thousands of EVs or PHEVs now on the roads in California.

Regards,
Thomas Sidle

Comment:

As a citizen of California who was once very proud to claim that our state seemed to be so far ahead with environmental issues, that is no longer the case and the recent proposal to cut the number of real zero emission vehicles down some 90% is a rather ridiculous decision in my opinion given the plight of the air we breathe today.

This would drastically reduce the ability of California to meet its goal of cutting global warming pollution 80% by 2050 - and most scientists will agree that we don't even have 40 more years of "business as usual" and steps need to be made RIGHT NOW! Our air, our children's air and their children's air depends on it - you have the power to make it happen.

Comment:

Dear Board Members of CARB,

I am extremely concerned that you will lessen the required number of ZEV cars required by 2012. The amendments that have been proposed will allow that to happen.

We are at a crucial time in beginning to deal with global warming. If we do not make dramatic changes the temperature escalation could become irreversible. That would cost far more to our country and the world than switching to zero emission cars.

Please do not allow a delay in our switch to alternative cars, which pollute far less than gas powered cars. Keep the 2012 requirement in place, and do not allow it to be weakened. We will all be sorry if you do, and I am hoping that the lobbying of the automobile industry does not convince you that alternative cars are not necessary.

Sincerely,

Linda Judd

Subject: Lets mandate tens of thousands of Electric Vehicles

Comment:

Hello,

Someone recently gave me a ride in a Toyota RAV4 EV from the San Jose area to the College in Santa Cruz and I was amazed. Toyota built this Electric Vehicle with performance years ago, so there is no reason that it can't be done by other automakers now with existing technology. I feel strongly that California should adopt regulations that mandate tens of thousands of EVs on our highways right here in California. Our electricity mix only includes 17 percent coal fired electric plants. So it is clear that electric vehicles at least as good as the Toyota RAV4 EV would reduce pollution and greenhouse gases significantly. Also EVs can be charged at night as not to put big demands on our electric grid.

Sincerely

Rudy Stefenel

Subject: Maintain a strong ZEV program

Comment:

Please don't reduce the number of ZEV's required by automakers. It's the only way we'll make our state (and country, and planet) less dependent on oil, and reduce our carbon emissions. Recent research indicates that the need to eliminate gas-powered vehicles is more critical than originally thought. The automakers will not make that move themselves -- they will only respond to government regulation and consumer interest. I'm doing my part, as a consumer, to encourage their environmental responsibility. Please do your part as well.

Thank you.

Subject: ZEVs for California

Comment:

On March 27, the California Air Resources Board will revise the history-making program that put more than 5,000 Zero Emission Vehicles (ZEVs) on the road.

But their staff has issued a proposal that, instead of propelling our country ahead toward a pollution-free future, will profoundly weaken the program once again. This proposal would require automakers to produce only about 150 ZEVs each per year through 2015â€”which amounts to less than what these influential regulators mandated in 2003.

Please urge the Governor to ask the board for a stronger proposal that puts more ZEVs on the roads, and helps move California toward the future.

Subject: Zero Emission Vehicles (ZEV) program
Comment:

Dear CARB,

I am very concerned about your intent to weaken the Zero Emission Vehicles (ZEV) program. I stongly urge that you support the production of electric vehicles. The automotive technology is in place that could work now to help clean our air and cut CO2 emissions.

CARB has proposed to cut the number of "pure" zero emission vehicles currently required in the ZEV program by 90 percent, which would slash the number of such vehicles on California's roads from 25,000 to 2,500 between 2012 and 2014.

The Governor and the CARB chair need to do the right thing for the citizens of California and ultimately the citizens of our precious earth. Please support the Zero Emission Vehicles (ZEV) program!

Sincerely, Ralph Sanchez

You proposed changes are nothing but a sell-out to big auto and big oil. The decisions made in California will have broad impacts around the globe for other jurisdictions (like mine) that make efforts to follow your lead. You have a home-grown business in your state that has just begun production of an incredible and viable electric car. I am anxiously awaiting their next model so that I can afford to replace my gasoline car. You should be doing everything in your power to help out the new industries that are making a difference and inventing new technology, not tilting the playing field now that they have accomplished what your staff report says can't be done.

People around the world will be watching your decision. You have an opportunity to be serious about climate change and kick those big manufacturers (and their dealers) into action. Increase the pressure and don't give them any more hope for a change or delay.

Comment:

Dear Sirs:

I am asking you to vote to save the ZEV. The future of our country, and indeed our planet, rests with using cleaner alternative fuels than the current gasoline engines. We want ZEV's now! We are willing to buy them now! Don't make us wait any longer because we are out of time. The citizens of this country need to demand that the car companies and the oil companies give us electric vehicles. The car companies are complaining about cars that they can't sell. They need to stop trying to tell us what to buy and start making the electric vehicles that we want.

California needs to be the leader in this. Other states will follow your lead. Please stand up and be counted to support the will of the people and for our future and our childrens' future. Thank you. Connie

Comment:

Hydrogen is no longer the best option!

We can either take energy and run it directly into our vehicles with known, functioning electric battery technology or we can take energy to hydrogen, then undertake an unbelievably complex infrastructure redesign project to provide the hydrogen into accessible filling stations around the country, only to power what is essentially an electric vehicle run on fuel cells.

Electric Vehicles are ready now-
with no infrastructure rebuild needed-
we can't wait any more for unproven technology
keep the ZEV program strong and support Electric Vehicles.

Form Letter 911 for Comment 97 for ZEV 2008 (zev2008) - 45 Day.

First Name: Orlin
Last Name: Larsen
Email Address: olarsen@sbcglobal.net
Affiliation: California Citizen

Subject: ZEV2008
Comment:

Not only do I think zero emission vehicles deserve their fair share to combat California's air pollution and maintain a clean air standing, I believe they should hold the biggest part of the responsibility to keep us within the newest CARB requirements in the near future.

Its also a shame that zero emission vehicles havent already have received a more serious place within California clean air standards years ago.

I am just one of the many of Californias concerned citizens who values clean air with freedom from oil and hopes for their state to be a leader and great example for other states in this nation to follow.

Of course I am hoping for consideration, and I thank you at the same time for listening.

Very Sincerly Yours,
Orlin Larsen

Form Letter 912 for Comment 97 for ZEV 2008 (zev2008) - 45 Day.

First Name: Ivan
Last Name: O'Neill
Email Address: ipoguard-pluginamerica@yahoo.com
Affiliation:

Subject: Keep the ZEV Program Strong
Comment:

I'm writing to urge CARB to adopt measures to:

- * Require the full 25,000 ZEVs that automakers had promised for 2012-2014
- * Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs
- * Incentivize plug-in hybrids that have the most on-board electricity storage

Plug-in hybrids and battery-electric vehicles are the best way America can guarantee energy independence, reduce global warming emissions, and create new jobs and industries. Fuel cell vehicles and plant-derived fuels are NOT the answer as they exacerbate global warming or continue reliance on imported fossil fuels. In addition, they will not be ready for many years to come. Battery-electric hybrid vehicles are two years away from commercialization.

Please ensure the goals above are evident in any amendments CARB passes at its 26 March meeting.

Kind regards,
Ivan O'Neill

Comment:

I would like California to be a leader in creating a Zero Emissions Transportation System. You on the California Air Resources Board can help by holding the requirement for the automotive industry to the highest standard for providing 25,000 Zero Emissions Vehicles by the year 2014. I urge you not to reduce the current requirement at all. If a change is to be considered it should be to increase the number of vehicles.

Thank you

George Newell

Subject: We need the maximal number of ZEVs

Comment:

I totally support the Governor's plan to reduce greenhouse gas emissions 25% by 2020. The best to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs), like your electric Tesla Roadster. Yet, the California Air Resources Board (CARB) may reduce the number of ZEVs required of automakers by 90%, which is a serious mistake.

I hope CARB chair, Mary Nichols, will keep the full 25,000 ZEVs that automakers had promised for 2012-2014, and to create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Subject: A stronger ZEV Program: more clean vehicles, no more loopholes
Comment:

Dear CARB Members,

A recent California Air Resource Board staff proposal calls for 90 percent fewer "pure" zero-emission vehicles—such as hydrogen fuel cell or battery electric vehicles—than what California's Zero Emissions Vehicle (ZEV) program currently requires. According to a new analysis by the Union of Concerned Scientists, California actually needs to have 379,000 "pure" zero emission vehicles on the road in 12 years to meet the state's long-term global warming pollution reduction target. Additionally, the ZEV program data is not open to the public, and the program is full of loopholes, allowing automakers to earn credits for vehicles that do not contribute to the overall goal of the program—more zero-emission vehicles on California's roads.

California has passed a landmark global warming law, and the ZEV program has the potential to be a critical part of the global warming solution. Current loopholes, however, reduce the effect of the program, and the CARB staff proposal would weaken it even further.

The ZEV program should be an integral part of the plan to reduce global warming emissions from California vehicles, with a requirement of 379,000 zero emission vehicles by 2020 and an end to loopholes for automakers.

Sincerely,

Francisco Costa

Subject: Save the electric car

Comment:

I am writing to encourage the California Air Resources Board to maintain a strong Zero Emissions Vehicle program. There is no logic in continuing along a path of reliance on oil, known to be destructive, or beginning a push for ethanol which disrupts food production and prices. There is precedence in the electric vehicle. There is substantial scientific research, free from political bias, that speaks to the need to set a new course that limits carbon emissions and the resulting warming of the earth. Our children's future depends on the decisions being made now. We must set standards that will steer us toward a sane energy policy, not one based on outdated corporate interests, but human needs. The electric vehicle will help in this direction. Please maintain high standards so this program will flourish.

Thank you,
Scott Angell

Subject: Electric Cars are the future, please help accelerate their adoption with legislation
Comment:

I find it strange that people on a "Expert Panel" about legislation about Zero Emission Vehicles constantly want to discount electric vehicles as an option... there is no fuel that is more diversified in how its is harvested and more universally accessible in house across the country (and the world)

This fuel is also 100% clean, no emissions (sure there can be emissions from the generation of electricity but its much more efficient than millions of little gas burning cars) and as stated above, I do not need to go anywhere to "fill up" I can do it from home... heck even my work as a charging station available for me to use if I need it.

There are so many companies coming to market right now with electric cars... and other manufactures are stating their desire to bring viable plug in hybrid options (where if I just drive to and from work I wold never need to use a drop of gas)

The future is electric cars, its starting now... the prices on this technology keeps dropping and it keeps getting better (just look how much longer your laptops run now than they did 5-10 years ago), please PLEASE do your part in passing some mandates that accelerate this movement.

I want to buy an electric car and you can help make that happen for me.

Comment:

We need all electric or serial hybrid vehicles available for sale and on the road now. Vehicles that are leased should get no zev credits whatsoever. I have told Toyota I will never buy another car from them, and certainly not from GM, unless it comes with a plug. Electric vehicles are a national security issue and companies should not be allow to suppress the proven available technology - NiMH batteries, road proven for over 100,000 miles.

I have purchased a converted electric car. It's being shipped now and should arrive by the end of the week.

Please do the right thing and force auto makers to produce and sell battery electric cars and end our addiction to oil.

Subject: Keep the ZEV Program Strong

Comment:

I feel that there is so much you can do to help support the future of vehicles powered by electricity. We are suffering enough with the high cost of gasoline, which continues to soar. Besides the damages it causes to our air quality.

You need to look into supporting production of electric vehicles - the automotive technology that could work now to help clean our air and cut CO2 emissions.

So please help support whatever it takes to push for electric vehicles to become a reality.

Subject: Importance of electric cars

Comment:

There is clearly an awareness of the problems related to global warming along with the problems related to an oil supply that cannot meet future demands.

It would be irresponsible to not plan for technologies that better prepare us to face these challenges and do not leave us at the mercy of foreign oil policies...

To best way to deal with oil dependency is not to be dependent on oil!

Before you take this choice away from the people, please consider the alternative.

Subject: ZEVs mandate more production
Comment:

Warmest greetings to all.

In the late 1970s the federal government realized that the auto industry alone did not have the proper incentives to raise efficiency standards for automobile gas mileage.

The Carter administration acted upon this and passed a law mandating automakers raise gas mileage standards from 10 mpg to 25 mpg.

In a few days you are going to hear testimony regarding EVs and ZEVs. Please keep the Carter administration's example in mind when you hear the testimony from the industry experts.

Automotive industry experts may tell you the technology does not exist or that they need more time for R&D. This just simply is not true.

Please visit Tesla Motors at <http://www.teslamotors.com/>

-OR-

Phoenix Motors at <http://www.phoenixmotorcars.com/index.php>

Automotive industry experts may tell you, consumer demand for EVs is very small. Again, this is untrue.

The very emergence of new, start-up auto manufacturers producing only EVs is concrete proof that consumer demand for EVs is extremely high.

Consumer demand for EVs is so high, it has allowed these small start up auto manufacturers to break the barriers of market entry and put EVs on the road. Again, I will point to Tesla Motors or Phoenix Motors as examples.

So here is the meat of the issue facing you, the ladies and gentlemen composing CARB. Either you are sympathetic to the major auto makers, or you are sympathetic to the individual consumer.

If you are a major auto maker supporter, help them hear the footsteps of the start up companies now producing EVs. If the major auto makers do not begin mass production of EVs soon, they may shut themselves out of this emerging market.

If you are for the individual consumer please mandate that the

major auto makers begin to mass produce EVs, using economies of scale, to lower the production cost, thus making EVs more profitable to industry and more affordable for consumers.

There is no hiding.

America will know who you support based upon the decision you make.

This can be a win-win situation but CARB must be the driving force to make it happen.

America is counting on you.

Please do the right thing.

Warmest regards,

Mark McArthur

Comment:

I recently traded in my Saab for a Hybrid Camry, but would have readily bought a plug-in hybrid instead, had one actually existed... CARB must use its significant power to lead the nation in requiring the auto industry to the right thing by building zero-emissions vehicles and making them widely available throughout the country. They've shown a stunning lack of ability and creativity to do this on their own. If CARB doesn't use its power to do these things, not only will our air quality continue to degrade, but our addiction to oil will continue to bleed our nation dry (both literally, through the senseless war in Iraq, and figuratively, through the loss of treasure spent on the war and the slow strangling of the economy by "petro-industrial" complex). Please think outside the box and keep the interests of the ordinary citizen in mind. Thank you.

There is nothing that I can say that you shouldn't have known years.

EV's work now; EV-1 and Toyota's RAV4EV as well as hundreds of homebuilts. I'm an aging carpenter on the coast and even I am building an EV. What of those who trusted you and invested in improving this technology? And the Tesla, after all they have done? The batteries exist; the 95 amp/hr NiMH's from the RAV4EV? They are in a file cabinet at Chevron. But you must know this. Or didn't it show up in the reports?

Who are you people?

Our planet is dying and you listen to lobbyists?

For the sake of all of the life on this planet, don't do this again.

Subject: Amendments to CZEVR
Comment:

Dear California Air Resources Board member:

Please count me as one of the many citizens who are in support of setting and defending the highest possible standards for reducing vehicle emissions and most effectively bringing zero-emission vehicles in to the mainstream of the traveling public.

Please also count me in as one of the legions who are desperate for a zero-emission vehicle to be released to market in the immediate future, so that we may cease to depend on carbon fuels for our own personal transportation needs.

For personal and public health reasons, environmental health reasons, and in order to drastically reduce the dependence of the US on foreign oil sources for automobile fuels, it is imperative to do everything to encourage, not discourage, automakers to make the zero-emission vehicles available in large scale to the masses NOW.

I plead that the California Air Resources Board maintain the courage to require the full 25,000 ZEVs that automakers had promised for 2012-2014, and do not be bullied into reducing the requirement by any percentage.

Most sincerely,

Aimee Deutschendorf

Subject: CARB ZEV rules
Comment:

We should restore the original ZEV mandate for the car companies to produce ZEV's.

We need to include the PHEV ZEV miles achieved as a function of the All Electric Range (AER) up to 90% equivalent ZEV for a 60 mile AER on the city cycle. This simple formula would allow the car companies to ramp up a vehicle they are already planning to produce quickly to address the issues of petroleum displacement and global warming. The issues of electric use vs gasoline in the PHEV is no longer an issue since the cost of gasoline is now 5 times the cost of using electricity in the same car. Also criteria emissions is also no longer an issue for these vehicles since they will be able to meet Many UDDS emission test cycles.

Please consider this proposal since it is simple and makes sense as well as recognizes the validity of previous work!!

Thank you for your consideration.

Prof Andrew A. Frank

Subject: More electric cars....

Comment:

Did you see the documentary titled....Who Killed The Electric Car?
If not, please watch it and think.
We need more electric cars not token amounts but real quantities.
They work. Most would fulfill the daily needs of the majority of
Ca. drivers.....I wish I had one.....can't afford it now because
they are made in such small quantities....mass production would
bring the costs to a lot of people.

Thank you,
Gura Lashlee
Willits, Ca.

Subject: Low emission cars
Comment:

To Whom It May Concern,

Please do what the Air Resources Board is suppose to do by providing citizens with more choices in the hybrid auto market. I would like to buy a low emission car, but they are not easy to locate and the choices are limited. I also suffer from asthma due to the terrible air quality here in Los Angeles, California. You maybe thinking "Why don't you move?" The answer to that is that I'm a native, I was born and raised here. Los Angeles is my home and will always be my home. Air pollution, smog has been a concern that I have lived with all of my life. I remember as a child smog days where we were not allowed to go out for recess. Is that normal? No! It is time we do what is right and quit making excuses and letting more time slip by. Don't you want to enjoy clean air? Thank you for your consideration.

Sincerely,
~Diana

Comment:

I home school my 10 year old son. He is very interested in energy and the environment. (If we could channel his energy, we would have no fuel crisis.) He is very interested in how the sun provides energy as well as electricity. I would love to show him how this would all work in a positive way. He does not like the way the car smells or when we are in back of a truck. We live on Highway 140, on the way to beautiful Yosemite. Every car that passes by, makes my asthmatic son sicker. People drive by our home every day to see clean beautiful nature, in turn making our plants die, our animals sick, . . . my son cough. We would love to get an electric car. I don't have 100,00 to spend. My home value just dropped 100,00 over what we owe on it. I make a good living, but our expendable income has diminished and we are living pay check to pay check. It costs me about 60 dollars extra a week to get to work now that gas costs so much. Please help me to be able to afford an electric car.

Subject: The time is now for the BEV that was ready in 2002
Comment:

California had passed a landmark ZEV program that has the potential to be a critical part of the global warming solution.

It is time to demand production of the very acceptable BEVs that were produced in 2002. If CA had just produced the 2002 RAV4-EV, we would not be forced to pay \$100+ per barrel oil. At the same time we would be well along on a solution toward meeting our CA state GHG emission targets.

I need you to be part of the solution and require the immediate production of battery electric vehicles--that the California Zero Emissions Vehicle (ZEV) program currently requires.

Please close the loopholes that reduce the effect of the program.

Subject: Neighborhood vechiles should go 35 MPH!

Comment:

I have heard about the legislature to more the speed limit of neighborhood vehicles from 25 to 35 MPH. and i think this is a good idea. I have looked into buying such an electric neighborhood car for some time now, but have always been put off buy the 35 MPH limit. If this limit was increased to 35, i would certainly purchase such a car...and i believe a lot more people would as well. This local travel done electrically would make a huge difference (far more than any public transportation measures, etc.) to lessen the amount of greenhouse gas we produce as a nation. Please raise the neighborhood vehicle speed limit to 35 and we will al see the results.

sincerely,

Douglas Trantow

Comment:

For typical urban commuter and shopping trips, the electric motor is the most practical form of auto propulsion. With advances in batteries, electric vehicles will reduce global warming and unhealthful air pollution more than any other proposed auto fuel source (even accounting for the power plant pollution).

As we have seen increasing investments in renewable energy as fossil fuel prices have risen and with the growing understanding of the dangers of global warming, maintaining California's ZEV requirements will spur the type of battery development that will make electric vehicles practical and economical.

Greetings Friends,

No doubt you have heard that the salmon fishery in California and Oregon has collapsed. I hope you've read that scientists have linked this collapse to global warming.

I've recently learned that you intend to reduce by 90% the number of zero-emissions vehicles that will be required in California. If we are serious about saving civilization (yes, it's that serious), then we should be drastically increasing the number, not decreasing it.

Please take seriously the impacts on California, and the whole world, as temperatures rise, ice melts, seas rise, and more people are competing for less land, fuel and food. Your Board has a key role to play.

Thank you for listening, and acting!
Jason Weston

First Name: Bill
Last Name: Deitchman
Email Address: bcd01@cwo.com
Affiliation: Native CA resident

Subject: March 26 vote on ZEV production limits
Comment:

To Mary Nichols, CARB chair and Board members:

As a long term native California resident, and parent of 3 children and a grand child, I am concerned with the degraded air quality we have in our fair state as well as the lack of economically priced ZEV's available for consumers to purchase and/or lease. We all know that the technology exists today to produce moderately priced ZEVs, however, it is clear that the auto manufactures have resisted and have fought against regulations requiring them to make available these vehicles on a large scale.

This "fight" that the auto manufactures have pursued has resulted in delays for our state and our nation in developing and incorporating alternative energy strategies that can help make us more energy independent, to have better air quality and less negative impacts on our natural resouces, and to ultimately ensure a better standard and quality of life for us and our future generations.

I request that you, and the California Air Resources Board (CARB), not reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014, but rather, continue, and if possible, increase the requirement of the automakers to produce over the full 25,000 ZEVs between 2012 to 2014 as has been previously mandated. In addition, I request that you create a separate requirement for plug-in hybrids that will let them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

As a resident of California, I believe that the time has come for our State Government to place the needs of our citizens and the long term health of our environment above the whims of the auto industry.

Please do what is clearly right and madate that the automakers produce at least the 25,000 ZEVs between 2012 and 2014.

Thank you for your consideration.

Bill Deitchman

First Name: Dell
Last Name: Anderson
Email Address: design2@anim8.com
Affiliation: n/a

Subject: Please consider the interests of private citizens over corporations
Comment:

Please do not weaken the ZEV regulations further. If you have not seen the movie Who Killed The Electric Car you may not fully understand what is going on behind the scenes. If you have, you will hopefully vote to maintain and strengthen the ZEV mandate.

This is America, we can focus on energy independence engineering. Or we can put our heads in the sand and let the rest of the world pass us.

I strongly support an agenda to reduce greenhouse gas emissions 25% or more by 2020. One of the most promising ways to reach this goal is to give consumers the option to buy Zero-Emission Vehicles (ZEVs).

I urge you to require the full 25,000 ZEVs that automakers promised for 2012-2014. Further, I urge you to create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations.

More electric vehicles on our roads will reduce America's dependence on foreign oil, improve our country's security outlook, and promote the health of the planet.

Thank you in advance.

Subject: Stop Weakening the ZEV Program

Comment:

The CARB ZEV program of 1990 was bold and relatively simple. It required automakers to ramp-up production of ZEVs by 2%, 5%, then 10% of their fleets by 2003. This mandate resulted in 4,400 BEVs being placed on the road, some of which are still being driven today.

Since it's inception, the ZEV program has been "adjusted" four times. Each adjustment was a bit like a knife in the back. The current staff proposal is more of the same, except at this point, there isn't much life left in the victim. There won't be a need for another adjustment, because if this one is approved, CARB will lose relevancy with just about every stakeholder except the automakers.

Each adjustment of the program has introduced more complexity, and more accommodation for the automakers. These two strategies have not resulted in any new vehicles being placed on the roads of California.

The current ISOR continues this fruitless trend by introducing yet more complexity (enhanced AT PZEVs?, Silver+) and yet more accommodation (travel provision extension).

The most unnecessary weakening of the program is the reduction of the minimum number of Type IV ZEVs by 90% to 2,500. That's 2,500 vehicles over three years, spread out over all automakers.

Directors, please recognize that this program needs to be strengthened, not weakened. Reject the proposed amendments and ask your staff to create proposals that will result in more ZEVs on the roads of California.

Comment:

I feel that the program undertaken needs to support the very complex allocations of credits given to large car builders for putting ZEVs on the road in a manner that does not favor either the BEV or the PHEV in developing the credit structures. I think it should allow credit for the accomplished increase in miles per retail \$ fuel cost. This should work for gas or diesel hybrids or the pure Electrics.

Subject: Electric vehicles

Comment:

I strongly support an agenda to reduce greenhouse gas emissions 25% or more by 2020. And the most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs).

I urge you to require the full 25,000 ZEVs that automakers promised for 2012-2014. Further, I urge you to create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations.

More electric vehicles on our roads will reduce America's dependence on foreign oil, improve our country's security outlook, and promote the health of the planet.

Subject: THE FUTURE OF HUMANITY

Comment:

Hello

I am a citizen from Portugal-Europe with 51 years old. I'm very concerned about the future of my children, grand children as well as all the others citizens of our planet. Consequently I try to be completely responsible with our environment in order to give to the next generation a clean and pacific world for every alive being. In this way of thought I strongly believe that "ZEVs" can help us to reach a cleaner environment and at the same time avoid our sick dependence of fossil energy.

Let's go change to a better way of life and pacific relation between all countries of world. That's possible now!

North America must start with this process because you have the technology, and the economic resources. The world will follow you.

Subject: Seriously?!
Comment:

As others have said, further weakening an already
much-weaker-than-the-original plan would indeed make a joke out of
the "Air Resources Board." I can just see the stand-up routines
that would come of it...

Seriously, if you decide to pass this, you should just dissolve
CARB and put the salary money to better use elsewhere in the
State.

Subject: Dont kill the electric car AGAIN!

Comment:

The entire nation watches to see if again, CA will kill off the electric vehicle. Our country, at war over oil, thousands of dead americans, we can no longer afford to bow to resistant car companies and special interests in the energy field. We can no longer fund our enemies with our oil dollars.

Do the right thing, do what a true America does. Do the right thing for this country and our environment. Do not pass this amendment, to do so would be tantamount to spitting in the face of our military families who have lost their loved ones in this war over oil. It would be a Shameful, reprehensible and utterly unamerican.

CA should continue to lead the way.

Subject: Please maintain the currently required ZEV levels.
Comment:

With battery technology improving at a pace rapid enough that independent companies are able to develop electric vehicles/ZEVs, (enough electric vehicles/ZEVs by the way to meet the standard already set) it seems foolish beyond comprehension to reduce the target number of ZEVs. I believe in an open market, but a regulated market. Look at all the innovation spawned by the ZEV standards already established. Would this have occurred in an unregulated market? Heartbreakingly, I doubt it. You are in a unique position of influence with regards to market regulation, its inherent prod for innovation and thus the future of every Californian and eventually every American. You are in a unique position of influence over the lives and fortunes of those innovators who have risen to the challenge of meeting the current ZEV standards. I implore you to maintain the currently required level of ZEVs.

Thank you for your time and consideration,

Benjamin Wilson

Subject: Tell Gov. Schwarzenegger to Save the Electric Car

Comment:

On March 27, the California Air Resources Board will revise the history-making program that put more than 5,000 Zero Emission Vehicles (ZEVs) on the road.

But their staff has issued a proposal that, instead of propelling our country ahead toward a pollution-free future, will profoundly weaken the program once again. This proposal would require automakers to produce only about 150 ZEVs each per year through 2015—which amounts to less than what these influential regulators mandated in 2003.

Please urge the Governor to ask the board for a stronger proposal that puts more ZEVs on the roads, and helps move California toward the future.

Subject: SEV 2008 Amendments
Comment:

Dear Chairman Nichols and other Board Members:

I understand that CARB has proposed an ZEV amendment to cut the number of "pure" zero emission vehicles currently required in the ZEV program by 90 percent, slashing the number of ZEVs on California's roads from 25,000 to 2,500 between 2012 and 2014. This is a significant step backwards from the progress the State has made since 2003 in mandating automakers to produce cars that will have a positive impact on global warming and the pollution that Californians are subjected to everyday.

My family and I ask that the CARB drop this proposal and require the full 25,000 ZEVs that automakers had promised for 2012-2014. Also, I ask that the CARB create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Thank you for your consideration of my views.

Very truly yours,

Paul F. Douglas

Subject: Do Not Further Weaken ZEV standards

Comment:

I am shocked that CARB is seeking to further weaken the ZEV standards. We all know from the documentary "Who Killed The Electric Car" that CARB played a major role in the plot to wipe this viable solution off the board just when it was proven that these cars could be made. I thought it would be understood that we need to go the other way especially considering that air pollution is still a major cause of health problems, the price of gasoline is increasing and making it necessary to continue the war over oil and particularly now that global warming is causing climate instability the world over. I urge CARB not to further weaken the ZEV standards but to increase the number of vehicles required.

Subject: ZEV Program is for your children!
Comment:

Dear CARB Board Members and Chair Mary Nichols,

Please support the production of electric vehicles. Do not cut down the number defined on the ZEV program. California has always been the leading example on how to achieve a better future for our children.

Don't distance yourself from what pollution produces in YOUR OWN BODY. It's not only about global warming. It's about health.

Try putting your face in front of the gas discharge of a car and BREATHE IN. How long can you stand it before getting totally nauseous? 2 seconds? Now imagine how it affects a 2 year old child!

The responsibility of what your OWN CHILDREN and GRANDCHILDREN will breath is now in your hands to decide.

Put more ZEVs on the roads!

Subject: zero emission regulations

Comment:

Dear CARB,

I write today to ask that the California Air Resources Board not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. In fact, now is the time to strengthen, not weaken, these requirements.

As a potential car purchaser, I am concerned about pollution as well as the high price of gasoline. I would very much like to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

Subject: Save the electric car (again)
Comment:

Please hold to the current requirements for the Zero Emission Vehicle Regulation. Do NOT cut the number of ZEV cars - we need *more* electric cars, not fewer. Our petroleum-based transporatation system pollutes the air and causes asthma, heart disease, and cancer in our communities. Kids in the Central Valley can't walk to school because the air is so bad! Where I live in Humboldt County, I must ride my bike alongside the highway to get to work and inhale CO2 emissions from all the cars and trucks. I sometimes wonder whether riding my bike is healthy since I have to breathe so much pollution, but there's nowhere else to go.

If any changes are to be made to the ZEV program, I urge you to increase the number of ZEV cars required and add a provision for plug-in hybrids. We need to take action NOW, and past CARB programs to require electric vehicles have shown that the automobile industry is very capable of creating functional, safe, and attractive cars that run on electricity. Thank you for taking the best action for clean air and for the future of our communities.

Subject: ZEV comment
Comment:

Dear CARB,

I write today to ask that the California Air Resources Board not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. In fact, now is the time to strengthen, not weaken, these requirements.

As a potential car purchaser, I am concerned about pollution as well as the high price of gasoline. I would very much like to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

Thank you,
Carin Chapin

Subject: ZEV Amendments to the 2008 regulations
Comment:

To the members of the board,

The California Air Resources board has an important vote tomorrow, March 27, 2008 regarding the future of ZEV (Zero Emissions Vehicles).

The vote revises the ZEV program to lower the production requirement for automakers through the year 2015. Instead of getting the 25,000 ZEVs as promised, the automakers would be allowed to produce only 2500.

Seeing the effect of Fuel-burning vehicles in California's air is obvious. If automakers aren't required to step up and change, the problem will only continue to get worse. Your responsibility is to protect and assist California's air. By stopping these amendments, you will be fulfilling your duties.

thank you
-Aaron Eiche

Subject: Don't weaken ZEV!!
Comment:

Please do not weaken the current Zero Emission Vehicle regulations. This regulation addresses air quality, global warming and petroleum dependency concerns.

I have been waiting and waiting to have the option of purchasing a battery electric vehicle to reduce my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. Subject: DoNot weaken current Zero Emission Vehicle regs.
Comment:

I have grave concerns that the California Air Resources Board is about to weaken the Zero Emission Vehicle regulations that Californians fought so hard for. I ask that you not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. In fact, now is the time to strengthen, not weaken, these requirements. This is important to me and to my family as well as to all California families.

In 2002 I purchased a Prius because of the Ultra Low Emissions. Soon we must replace our 2nd car and I am concerned about pollution as well as the high price of gasoline. I would very much like to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

I would very much like to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

Subject: Zero emissions
Comment:

Dear CARB,

I hope the California Air Resources Board will not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles reduce air pollution, and help fight global warming. Now is the time to strengthen, not weaken, these requirements.

As a potential car purchaser (I need to replace my 2000 wagon even though it has less than 60,000 miles), I am worried about pollution and the high price of gasoline. I want to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. Subject: Zero Emission Vehicle Regulations
Comment:

Hi CARB folk,

As someone who wishes they could purchase a viable electric vehicle it disturbs me that you are considering weakening the Zero Emission Vehicle regulations. The monolithic car companies need a kick in the ass to actually move forward and innovate, and the massive size of the California market means you can help push them towards that innovation. Letting them slide on Zero Emission Vehicles isn't going to help.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

Subject: ZEV Regulations Vote
Comment:

Dear California Air Resources Board;
Please do not vote to weaken the current Zero Emission Vehicle regulations. We need more, not less, regulation to reduce global warming and improve California's air pollution problems.

In the next few years I will be in the market for a new car. While hybrids are an attractive alternative to reduce pollution and reduce fuel consumption, I would love to have the much better alternative of an electric vehicle, which solves both of those problems. If regulations are loosened, the auto companies will only make a token few ZEV vehicles per year, and they will not be available enough to make any difference to the environment. Auto makers have made fortunes from sales to California residents. It is time to push them to contribute to some solutions to our problems by making alternative vehicles like ZEVs available.

In addition, I understand that you have proposed to significantly increase the number of plug-in hybrids that must be produced and fully support this idea to be included in ZEV regulations. This is another great innovation that could be made available to consumers, and I would be excited to purchase this type of vehicle if it were available.

Subject: Rolling back of ZEV program in CA
Comment:

Hello,

I believe that rolling back the current program is a terrible step and in the wrong direction given the outlook for CO2 buildup and the myriad of consequences that will result from an increase in the average global temperature.

Both battery only and the newer plugin hybrids should be supported in the greatest possible numbers as the staff has recommended. We need to move to where most vehicles are either electric or plug in hybrid types of vehicles and the fastest way for that to happen is for CA to mandate the highest possible number of those vehicles that automotive manufacturers must sell in CA. The more, the sooner, the better. We need to push the auto manufacturers and continue to be leading the charge (no pun intended) in adopting these newer vehicle types that will limit the energy consumption and CO2 emissions.

Sincerely,

Bruce Katz
Mill Valley, CA

Subject: don't weaken the standard
Comment:

To whom it may concern:

I am writing in regards to an article I read in the San Jose Mercury News this morning regarding the proposal from the CARB to weaken the zero emission vehicle mandate from 25,000 to 2,500 vehicles per year. When are you going to learn? The car companies and the fuel companies must be required, and for their own good, to successfully produce zero emission vehicles. You folks didn't come out so well in that "Who killed the electric car" documentary? Are you going to do the same thing again? If we had forced the car companies to stay on track with the production of electric cars back then, would we be facing \$3.50/gallon gas now? For that matter, would our domestic car companies be having their lunches handed to them by Japanese and Korean car manufacturers as our domestic dealerships have swollen lots of pickups and SUV's? My wife and I are considering the purchase of a new car over the summer, my inclination is to buy domestic, but the imports are the companies that have the lead in cleaner cars, your board bears part of the blame for the economic situation facing the state and nation today. You have another chance to do what is right and hold the line against convenience and profit over long term advantage

I am strongly opposed to the proposed changes and urge their rejection.

Thank you for your time.
David Wolf
San Leandro, CA

Comment:

Dear Air Resources Board,

I want to express my concern regarding changes being considered during this upcoming hearing.

I HIGHLY agree with keeping the higher requirements of automakers when producing electric or fuel cell vehicles, and not reducing the amounts.

PLEASE vote to keep our tougher restrictions and encourage the quicker growth of this Great Program!

You have a GREAT opportunity to influence the future air quality of California, and the rest of the country will follow our lead.

I am ready to buy my first electric vehicle, please be a part of helping to make them more affordable and more available.

Please do not fall for the lobbyists demands.
It must be a Very Difficult job to keep everybody happy, but isn't your first priority to do what's right for the citizens of your state?

I thank you for your time and consideration of this important issue.

Carmen
San Jose, CA

I would very much like to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

Thank you!

Subject: ZEV Regulation
Comment:

Dear CARB,

I am writing to ask that the California Air Resources Board not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. Indeed, now is the time to strengthen, not weaken, these requirements.

As an automobile consumer, I am concerned about pollution as well as the high price of gasoline. I would very much like to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are allowed to make as few as 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate the staff's vision in including these cars in the ZEV requirements. As a resident of San Francisco a plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is discharged, would be a great option for me.

Sincerely,

Thoms J. Madill

Subject: ZEV's
Comment:

Dear Distinguished Members of the California Air Resources Board,
As a concerned citizen, I am asking you to hold the automakers to their word... requiring them to produce 25,000 ZEVs by 2012 - 2014. ZEVs benefit EVERYONE. As our Nation's leaders urge us to "kick our addiction to oil", we all must make the necessary sacrifices to ensure that our World and AIR is safer and cleaner for our children and future generations. I'm proud to be a Californian, primarily because we have traditionally led the charge (no pun intended) as it relates to important environmental issues. ZEVs would be a fantastic, meaningful step toward SIGNIFICANTLY reducing our dependence on foreign oil. The oil companies & automobile manufactures have had a good run... to the detriment of our planet. It's time we give a more reasonable solution a chance.

Sincerely,
Christopher Greenwell

Comment:

I am a taxpaying middle class individual that between my husband and I drive 100 miles per day. We have good careers and good jobs and are basically blowing our budget on fuel just to get to work. An electric car would be an answer to a prayer. Even if we just bought one and still kept a gasoline vehicle we could save so much. Think of what that could do to our hurting economy if they were built here in the USA. We have the technology lets keep it in this country and use it. If you make them we will buy them, I am proud to be an American and would love to help have a clean America filled with American made electric cars!

Subject: Please don't amend 2008 ZEV regulations
Comment:

Sirs,

I was just informed that the California Air Resources Board is considering weakening the ZEV regulations that most Californians hailed as a great step forward when first proposed. California has always shown innovative and creative leadership in attacking large-scale environmental problems, and reducing the effectiveness of the 2008 CA ZEV regulations would be a step backwards. I am writing to ask that you not weaken the current Zero Emission Vehicle regulations. ZEVs not only reduce air pollution, but help in the fight against global warming. In fact, now is the time to strengthen, not weaken, these requirements.

As a potential car purchaser, I am concerned about pollution as well as the high price of gasoline. I would very much like to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. I write today to ask that the California Air Resources Board not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. In fact, now is the time to strengthen, not weaken, these requirements.

As a potential car purchaser, I am concerned about pollution as well as the high price of gasoline. I would very much like to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

Comment:

The acknowledgement of global warming, and the impact it is having, which is increasing, has finally reached the critical level. Most people understand that it is happening and the causes. You have that behind you and the future of the world before you. Help protect our state and our world from the catastrophic consequences of not providing strong leadership and guidance to auto manufacturers. Californians drive millions of cars, millions and millions of miles. We have a responsibility which must not be shirked. I am ready, willing and able to purchase a plug-in hybrid vehicle, if one was available. I will stand by my convictions and duty as a human being and consumer. Will you? Thank you.

We are a planet in distress...everything is changing before our eyes, and we need "revamping" all across the board: educational reforms, environmental, governmental, and the list goes on and on.

Please adopt a zero emission policy TODAY because our current course of action determines if we "make it or break it" as a society. I BELIEVE WE HAVE WHAT IT TAKES TO MAKE IT!!! Please do the right thing and vote zero emissions into action.

Thank you for your time.

-Corey Smith

Comment:

Hello,

I am a native California. I have lung problems. I was not born with lung problems but growing up in Los Angeles with the smog has caused me to have asthma along with yearly lung issues. I am completely confused as to WHY you would vote to WEAKEN ZEV regulations. The only reason I can think of is that you do not care about the people of California, instead you care more about the corporations who own car and oil companies. During this time of global warming we need to increase our output of zero emission vehicles if anything.

Currently, I am driving a vegetable oil fuel based car. It is a good alternative for now, but I have seen that this is not the answer for California. There is not enough fuel to go around for one. I would be thrilled to buy a ZEV auto.

On that note, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option all around.

Finally, as I stated above, I am an adult suffering from Lung issues due to bad quality of air here in Southern California. I will not let that happen to my children and will seriously consider moving states should you vote on the side of Corporations over people. That is no state I want to be a part of.

Thank you,

Mrs. Mina B Chassler
Topanga, CA

To whom it may concern at the California Air Resources Board:

I write to urge you not to make any reductions, but only increases, in regulations that would encourage the development and spread of low-emission, high mpg vehicles. I drive a Prius; would spend the money to convert to a plug-in as soon as that is feasible; and believe it is absolutely essential that we develop vehicles not fuelled by fossil fuels. . .nor ethanol or gasohol. Please do everything in your power to make low emissions vehicles more probably in the future, not less.

Respectfully, Rev. Michael B. Eggleston

Thomas O. Nass' Paraphrase and Enhancement of W.C. Lowdermilk ,
U.S. Dept of Agriculture 1948, from "Conquest of the Land Through
7,000 Years"

This Holy Earth

Thou shall inherit this Holy Earth as a Faithful Steward,
respecting, protecting and conserving its Environment, its
Resources and its Productivity for future generations.

Thou shall safeguard its Fields from erosion; its Soils and
sub-Surface from Chemical Saturation; its Waters, its Ground
Waters and its Air from Pollution and over-heating. Its Oceans
from over fishing; its Forests from desolation; its Mineral
Resources from depletion; its Hills from overgrazing by thy herds
and its Creatures from extinction, so that thy descendants may
enjoy its abundance as once did thee.

All Nations do share in the Ownership of this Holy Earth. Ergo,
if any Nation or its leaders should fail in the responsibilities
of their Stewardship, then all of thy Crop land shall become
sterile ground with wasting gullies; thy waters unfit to drink;
thy air too thick to breath; the meat of thy herds and thy flocks,
as the spawn of thy waters and thy oceans, unfit to eat. If any
of the above should come to pass, then thy descendants shall
gradually diminish in their number and eventually depart from off
the face of this Holy Earth. Why? Because thy insatiable greed
and thy ignorance of thy ignorance shall have decreed it so.

Subject: Weakening the ZEV rules
Comment:

Dear CARB members,

If we are to significantly shift the trajectory of the impact of our transportation system on climate change, someone somewhere must take a stand for what's necessary - to set a goal and see what speaking truthfully about what must happen to achieve success evokes in the system/society at large.

Today, here in California, you are those leaders who will have the chance to look back and say that you did that - you spoke the truth about what must happen and acted accordingly.

Please see that the ZEV regs are aligned with the reality of what must happen - not with the reality of the small minds that have led us into the dilemma we now face. Strengthen, don't weaken the regs - challenge us all to do what's needed for this and future generations.

Respectfully,
Scott Spann

Subject: Don't Weaken ZEV Regulations!!!
Comment:

Dear CARB,

I write today to ask that the California Air Resources Board not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. In fact, now is the time to strengthen, not weaken, these requirements.

With the threat of climate change impacts escalating every day, electric and plug-in vehicles become steadily more important, especially in a state like California that is on the cutting edge of real change that can protect individuals, our climate, and our economy. As a potential car purchaser, I am concerned about pollution as well as the high price of gasoline. I want the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me. I have been waiting for several years to purchase a car, until plug-in hybrids are available to the general market. Please make sure all Californias have this option!

Subject: ZEV Mandate

Comment:

This mandate was enacted in 1990. Yet, despite the enormous technological advances, and even some temporary BEV production, today the major automakers are not providing ZEVs. The ZEV Mandate cannot be watered down any longer. The automakers have had eighteen lengthy years to comply; there simply cannot be an excuse. California stepped up to the ZEV challenge, and cannot back down.

Enforce the ZEV Mandate as it was meant to be enforced!

I would very much like to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

Sincerely,
Diane Reed
Richmond, CA

Subject: Please Don't Weaken the Zero Emission Vehicle (ZEV) regulations !
Comment:

Dear CARB,

I write today to ask that the California Air Resources Board not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. In fact, now is the time to strengthen, not weaken, these requirements.

As a potential car purchaser, I am concerned about pollution as well as the high price of gasoline. I would very much like to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

Sincerely,

Laura Herndon

Subject: Strengthened Zero Emission Vehicle Regulations

Comment:

Dear CARB,

I am concerned that the California Air Resources Board is considering weakening the current Zero Emission Vehicle (ZEV) regulations. It seems to me that this is a move in the wrong direction and that now is the time to strengthen, not weaken, these requirements.

I am close to buying a new car that will reduce my carbon footprint. It's not practical, I suppose, but I would very much like to have the option of purchasing a zero emission vehicle. But if you act now, perhaps in a few years we'll be able to replace my wife's car with a ZEV vehicle.

So I support the your staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, would be ideal for me now.

Subject: Do not weaken the current Zero Emission Vehicle regulations
Comment:

Dear CARB,

I ask that the California Air Resources Board not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. This is the time to strengthen, not weaken, these requirements. To do otherwise is an outrage.

As a consumer, I should have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. If automakers are only required to make 150 ZEV vehicles per year, this option will be scarce.

I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for conscious consumers.

Manufacturers are not going to develop the vehicles I want, that use no combustible fuels, without governmental mandates. We can not leave it up to the "market forces" which historically have preferred the status quo. We MUST act now to make these vehicles widely available. It is up to you to spur on that change.

Sincerely,
Michael Pliskin

Subject: Zero Emission Vehicle (ZEV) Regulations
Comment:

Dear CARB,

I write today to ask that the California Air Resources Board not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. In fact, now is the time to strengthen, not weaken, these requirements.

As a potential car purchaser, I am concerned about pollution as well as the high price of gasoline. I would very much like to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

Frankly, I would imagine a little more creativity coming out of California. I expect leadership coming from our State, not the opposite. Where is the State of California stepping up and committing to buying 800 ZEV cars for its state pool, followed by higher commitments in the future?

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

Subject: Maintaining strength of the zero emissions vehicle requirements.

Comment:

Please do not repeat the past mistake which caused the loss of the EV-1 General Motors zero emission vehicle. This vehicle proved to be a success with all its users, and yet had to be taken away when CARB rescinded the requirement of the zero emissions vehicles. Much precious development time has been lost since then. We would be a lot farther along in perfecting these cars if only CARB had not backed down.

As an engineer for the past forty years, I know that all it takes to create solutions to any problem is to turn us on to the task. It is only management who, through short-sighted desire for quick profits, holds us back.

Thank you very much for your attention.

Sincerely,
Jerry McMurry

Subject: DO NOT WEAKEN CARB STANDARDS!

Comment:

Please do not vote to weaken the CARB standards today! Of all pollution sources in California, automobile exhaust is one of the largest; the Automotive industry WILL NOT MANUFACTURE ZERO-EMISSION VEHICLES without us requiring them to do so, as they perceive (wrongly) that they will lose \$\$\$ by doing so; in fact, they will be able to make a profit on zero emission vehicles, just as they have all along, it will just require significant work & change. Without the State requiring them to do this, they will delay this change as long as they possibly can, at the expense of Californians' HEALTH, and at the detriment to the global fight to lower Carbon emissions & reverse Global Warming.

PLEASE VOTE NOT TO WEAKEN THE CURRENT CARB EMISSION STANDARDS!

Subject: don't weaken Zero Emissions Vehicle regulations!

Comment:

Dear CARB,

I come from an electric car family - my father ran an electric car business in the 1970s, responding to the energy crisis and environmental concerns. A lot of progress has been made since then, but more needs to be made. Weakening the ZEV regs as proposed will NOT help!

I write today to ask that the California Air Resources Board not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. In fact, now is the time to strengthen, not weaken, these requirements.

Subject: Zero Emission Vehicle regulations
Comment:

To California Air Resources Board members:

I urge the California Air Resources Board not to weaken California's Zero Emission Vehicle regulations. Zero emission vehicles reduce both air pollution and greenhouse gas emissions that have caused global warming. Indeed the global warming crisis mandates that tougher regulations be adopted, rather than weakening the existing ones.

As a consumer I am concerned about pollution as well as the high price of gasoline. I would like to be able to purchase a zero emission vehicle to reduce my own carbon footprint. However, this will be extremely difficult if automobile companies are only required to make 150 ZEV vehicles per year.

I fully support the CARB's staff proposal to significantly increase the number of plug-in hybrids that automakers are required to produce and appreciate the staff's vision in including these cars in the ZEV requirements. A plug-in hybrid with an all-electric range but also runs on gasoline when the battery is empty is a great option for consumers like me.

Sincerely,
Christine Keyser

Comment:

Please provide a stronger proposal that puts more ZEVs on the roads, and helps move California toward the future.

On March 27, you will revise the history-making program that put more than 5,000 Zero Emission Vehicles (ZEVs) on the road.

But your staff has issued a proposal that, instead of propelling our country ahead toward a pollution-free future, will profoundly weaken the program once again. This proposal would require automakers to produce only about 150 ZEVs each per year through 2015—which amounts to less than what you mandated in 2003.

Please step up and enforce stricter regulations that will ensure a cleaner future.

Comment:

Dear CARB,

I write today to ask that the California Air Resources Board not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. In fact, now is the time to strengthen, not weaken, these requirements.

As a potential car purchaser, I am concerned about pollution as well as the high price of gasoline. I would very much like to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

Sincerely,

Donna Lewis

Subject: Transition to Sustainable Mobility
Comment:

Dear Sir / Madam:

As someone who has driven an electric vehicle daily for the last four years; and has influence as a teacher at a internationally prominent design school over the future; I urge you to apply the necessary pressure on industry to develop and promote sustainable mobility, now. I often pose this question to my students, asking, "how long do you expect humanity to exist?" My response is that, Oil is too precious to be burning out our tail pipes. There are many important oil dependent products that can be permanent in nature. The remaining oil belongs to the future, we must end our non permanent consumption of oil, now, and implement any and all forms of sustainable mobility that we have available to us. Make the noble choice.

Thank you.

Subject: support for strengthened zero emission vehicle rules

Comment:

I have two hybrid vehicles and would invest in an all electric vehicle if it were economically viable. My home has a 3.2 kw grid tied pv array and I plan to expand it in the near future in order to charge my hybrids if/when I can upgrade them to plug in hybrids. Decisions you make today will effect the economic viability of this dream. Do the right thing for CA's air and the planet's over-stressed ability to handle our CO2 emmissions. Do not repeat the mistake that was so well documented in the film "Who Killed the Electric Car". Your mandate is to protect our air resource. Your decisions today may help save the domestic auto industry that seems stuck in the last century.

My grid tie system hooked up to a large battery in the car can even work in reverse to offset peak demand (V2G) and further reduce Greenhouse gas emmissions because a natural gas plant will not have to work as hard. Please make the right choice today. The facts are overwhelming and I am ready to act. Thank you for protecting the air of CA and the planet by strengthening zero emission rules and supporting plug in hybrid production.

Thinking on the sunny side,

Neal Mock

Subject: Zero Emission Vehicle (ZEV) regulations

Comment:

Dear CARB,

Technologies like ZEV and plug in hybrids need all the support they can get to become a part of (and to eventually replace) the national fleet of automobiles in order to (eventually) substantially reduce CO2 emissions in the future. What we do now will have an effect on tomorrow. We need more ZEV and plug in hybrids on the roads, not fewer.

I write today to ask that the California Air Resources Board not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. In fact, now is the time to strengthen, not weaken, these requirements.

As a potential car purchaser, I am concerned about pollution as well as the high price of gasoline. I would very much like to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

Comment:

Dear Committee members,

I write to urge you, the California Air Resources Board, to support the strongest (and current) Zero Emission Vehicle regulations. Zero emission vehicles are urgently needed to reduce air pollution, and help in the fight against global warming. Now is the time to strengthen, not weaken, these requirements.

As a car owner, I am concerned about pollution as well as the high price of gasoline. I am looking forward to making my next car a zero emission vehicle. I am very concerned if automakers are only required to make 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

Sincerely,
Carol Murota

Please do not weaken the current Zero Emission Vehicle regulations. These vehicles reduce air pollution and help fight global warming.

As a citizen of the great state of California, I feel strongly that I am entitled to the freedom to buy a zero emission vehicle. This won't happen if automakers are left to their own devices.

I support the staff proposal to increase the number of plug-in hybrids that must be produced. A plug-in hybrid that has an all-electric range and also runs on gasoline when the battery is empty seems like the ideal vehicle for me and most drivers in this state.

Sincerely,
Susan Deyl

Comment:

Dear CARB,

I understand your desire to encourage hybrids and hydrogen internal combustion vehicles -- they do have a role to play. But NOT at the expense of completely gutting California's ZEV requirements. ZEV can also play a needed role -- see the report from the Union of Concerned Scientists. The proposed reduction to 2500 ZEVs, coupled with loopholes and lack of transparency, is a joke. Please keep the requirement for a substantial number of ZEVs on California roads. In combination with solar power on my roof, a ZEV would let me substantially reduce my carbon footprint and my contribution to global climate change. The same holds true for California overall.

Encouraging hybrids and hydrogen cars is a good idea, too.

Dan Quinn

The automotive industry will hem and haw and say that what's required of them is impossible as long as they can get away with it. I am among those who believe that we really only have ten years to start turning the tide of climate change. Dramatic changes well outside our current status quo are going to have to be made. Technology will not be able to solve all of our problems but it will be a huge component. We cannot afford to relax the already minimal demands made of these auto manufacturers - if anything we need to strengthen and enhance the pace and scale of change. An increase in the number of low-emission vehicles and plug-in hybrids available in the market should be part of what is required of the automotive industry but at the same time there is no reason to make things easier for some of the richest companies on earth responsible for selling vehicles such as Hummers. If they can come up with such destructive technology they can certainly come up with more beneficial technologies under duress.

California Air Resources board, I beseech you please not weaken our commendable Zero Emission Vehicle Regulation, it would be a step backwards for the health of our citizens, the country, and the planet itself. Weakening provides a way of keeping inefficient overbuilt vehicles in manufacture and on the road which makes no sense in view of air quality or coping with our astronomical gas prices. Let California lead, not cave in to pressure that benefits no one but those in a position to profit financially while the population suffers the result. Thank you.

Subject: PLUG-IN ELECTRIC CARS
Comment:

To Whom It May Concern:

I am mad as hell that plug-in electric cars are not made available to us in the United States. I'm doing my best to spread the word about this issue. Every chance I get, I tell people that they should watch "Who Killed the Electric Car?"

Currently, my brother-in-law is in the process of building a plug-in electric car. He has found a great deal of support on the internet. He has found a network of people who have a common goal in our area (Central Ohio). Consequently, he has been able to get a lot of his part/supplies for free. He figures that his total cost will be approximately \$2,000. He's a HERO in my opinion!

Thanks for listening!

Subject: please strengthen ZEV
Comment:

Dear CARB,

I intend to purchase a Chevy Volt or Aptera if/when they become available. Manufacturer's need incentives to get rolling. Please be out front, not slowing progress.

I write today to ask that the California Air Resources Board not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. In fact, now is the time to strengthen, not weaken, these requirements.

As a potential car purchaser, I am concerned about pollution as well as the high price of gasoline. I would very much like to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

thanks
Mike Trivich

Please don't let us down by not endorsing the use of electric cars.

Your actions as seen in the movie "Who Killed the Electric Car" were beyond belief. Any member of your board connected in any way with the petroleum industry or the auto industry should recuse themselves since there would clearly be a conflict of interest. Please save the electric car.

Subject: requirement for no emission vehicle production
Comment:

Please provide for continuation of the current requirement for the production of no-emission vehicles. I am working to ensure my next vehicle is such a car. Please do not lower or eliminate this requirement. I do not seek an NEV type vehicle but a full-performance freeway capable one. New battery technology is soon to arrive to make this more practical. We must get away from fossil fuel powered cars. I have already installed the solar panels to power my new vehicle. Please do not undercut the requirement or the incentive for manufacturers to produce them, as occurred when this previous requirement was weakened. I have driven a hybrid vehicle which I really like since 2003, but it still requires the use of a toxic fuel source which requires sending vast amounts of US wealth overseas. Please do the right thing and don't be dissuaded from that by corporate opponents of electric autos. Thank you. --N. Edward Boyce

Subject: Please put pressure on car makers!

Comment:

Hello,

I am writing in regards to tomorrow's vote on the Zero Emissions Vehicle regulations. Please do not weaken regulations on auto-makers to produce zero-emissions vehicles! I want my kids and grandkids to have clean air to breathe, and as a consumer I want the option to purchase vehicles that help to bring about that change. Now is no time to even consider weakening these regulations! If anything, we should be putting MORE pressure on auto-makers to take responsibility for the global footprint their products leave! I appeal to you to strengthen these regulations. Anything we can do will help our future, and I feel it is the only responsible choice!

Please vote wisely!

Thanks and regards,
Christina Sousa

Subject: zero emissions
Comment:

I write to ask the California Air Resources Board not to weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. It is time to strengthen, not weaken these requirements. The Great thing about being a Californian is being the example, taking the steps. It isn't always easy being in the front of a new way to be, to live, but as a Californian we have been and need to continue to lead the country by being the example.

As a car owner, I am concerned about pollution and the high price of gasoline. A zero emission vehicle is a very attractive alternative. I support all exploration and production of hybrid cars. I see them as the necessary transition for a society that lacks community transportation alternatives. The public must be given alternatives and California can be the example for the transition. This transition is vital to the survival of the planet as we know it. For anyone who care about animals and plants in addition to humans the facts of global warming can no longer be ignored. Please continue to lead in this effort and do not weaken the Zero emmision vehicle regulations but strengthen them.

Thank you.
Sincerely,
Sonja Roth
Global Compassionist

Subject: Amendments to reduce ZEV mandates
Comment:

Dear CARB Board:

I've been driving a converted VW Rabbit BEV since 1993. That's 42,000 miles of reliable year-round transportation to work and shopping. The "fuel" is wind energy from the local utility.

When people see my car they ask who sells these? I have to say "no one". They ask "if you can build one why can't Ford or GM?" My response is that the major auto manufacturers could build a much better BEV, but they claim batteries aren't good enough and there is no market. Yet my zero pollution, zero oil importing BEV is driving around every day

I've been an electrical engineer in the energy field for 36 years, and based on my experience can assure you that someday BEV will be in extensive use throughout the world! It's going to happen with or without CARB, but will happen much sooner with your guidance.

Please do your part to encourage the emerging BEV industry, so that society will be able to look back and commend CARB for visionary leadership!

Thank you

Comment:

Zero-emissions vehicles are initial 'beta' entries in attempts to maintain our planet's many equilibria, all finely and critically balanced to allow our present evolutionary status as hominids. Departures from Mother Nature's embrace are enormously costly to those forces of equilibrium, and radical divergences [such as internal-combustion engines, external combustion processes [open fires, blast-furnaces, et al.] are proven toxic to living organisms and their societies.

Please, PLEASE, let your regulations exhibit your intelligence in promoting the zero-emission market-place 'testing' now evolving other critical technologies and inquiries. Our planet REQUIRES our intent investigations to assure its health.

Subject: I support CA Zero Emission Vehicle Regulation!

Comment:

I'm in the market to buy a new car, and I want to buy a plug-in hybrid! These vehicles should be readily available to the public! I'm putting together The Groovin' Green Gallop, a 5K and Alternative Energy Expo, and I'd LOVE to showcase the clean air, zero emission autos that are available now and will be in the near future, so that consumers will be made aware of their options. That will create more demand, so let's forward the Zero Emission Regulation!!!

Subject: ZEV vehicles
Comment:

Dear CARB,

I write today to ask that the California Air Resources Board not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. In fact, now is the time to strengthen, not weaken, these requirements.

As a car purchaser concerned not only about pollution but as well the high price of gasoline, I need the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are required to make only 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

Let's stop fiddling while the planet burns.

Comment:

Hi

Last summer I needed to replace a 13+ year old vehicle--I had been putting off a car purchase as I had hoped for an eco friendly car beyond the current hybrid options to be available--so I purchased a Toyota Matrix with 5 speed transmission that gets 35 MPG Fwy. I would have liked to purchase an all electric vehicle and the possibility to generate its power from solar panels that I could have placed on the roof of my home.

As you consider the future of Zero Emission/Electric vehicles, please encourage more development of these cars to conserve the resources of God's creation and minimize the impact of global warming.

I write to urge you not to reduce the ZEV program as you intend. Even 25000 electric vehicles is not enough. Global warming is a real threat. Reported today in the LA Times a portion of Antarctica, 7 times the size of Manhattan, broke away due to warming. It was the edge of the Wilkins Ice Shelf which has been there for 1500 years.

Comment:

I am writing as a California resident concerned about global warming and reducing our carbon footprint. Please do not weaken the Zero Emission Vehicle regulations. This is NOT the time to do that. We need more than 150 ZEVs per year! I also support the staff proposal to significantly increase the number of plug-in hybrids that must be produced as part of the ZEV requirements. Your task is to implement AB 32 to the fullest extent possible, not weaken it. I want to drive the most environmentally benign vehicle possible!

Subject: Vote on 2008 ZEV mandates.

Comment:

I would like to start off by saying that, whether or not you like it, California is setting the trend in low emission vehicles. I'm a little hesitant to get involved in California's politics since I live in Washington state, but after watching "Who Killed the Electric Car" and "An Inconvenient Truth" again the line "The air doesn't know a boundary between..." sunk in.

I would like to urge you to KEEP UP THE REQUIREMENTS for zero emission vehicles. To reduce or discontinue the mandates will allow the auto makers to continue their current practices plunging us all into deeper trouble. The 2003 decision by CARB caused a 10 year setback in progress towards the reduction of fossil fuel use and its associated pollution. I for one would not like to see the same mistake repeated.

The auto makers may complain but remember that they are lethargic dinosaurs (big and slow). They are having a hard time dealing with the fact that the world is changing and faster than they can cope with. The age of wide spread use of the internal combustion engine is over. We can no longer tolerate the side effects of its use, pollution and dependence on foreign fuel supplies.

The United States and the entire planet for that matter are in serious trouble both economically and environmentally due to the use of fossil fuels. It's up to every person to do his part to reduce their contribution to the problems. One way is to drive zero emission vehicles but that can't be done unless the vehicles are available.

Thank you;

Randy Carter

Subject: CARB must keep up pressure on automakers and maintain demand for ZEV's
Comment:

Dear CARB,

I am very upset to learn that CARB is planning to roll back the ZEV production requirements for automakers. California and America are ready for clean cars and the technology is ready. I strongly urge you to show the leadership and initiative necessary to give California and America the clean air, and CO2 / fuel savings urgently needed by maintaining the increasing ramp up to the eventual 2018 ZEV goals. I strongly believe that if the ramp-up is not required, that 2018 will come and the 18% goal will not be reached.

CARB must realize that there are many conspiring interests to maintaining the gasoline-based status quo. Manufacturers are not listening to customer demands and are paralyzed by fear and lethargy. Initiatives like the ZEV requirement are critical to forward movement in this direction. We cannot wait for the manufacturers to get their acts together. I applaud CARB for setting the ZEV goals and I urge you to maintain them and not accept the proposed weakening amendments.

Thank you very much,

Matt Zavislak
Minneapolis, MN

I write to ask that the California Air Resources Board not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles reduce air pollution and global warming gasses. Now is the time to strengthen, not weaken, these requirements.

My family is highly concerned about pollution, climate change, declining oil production and rising gas prices. We would love to have the option of purchasing or converting to a zero emission vehicle. This is unlikely if automakers are only required to make 150 ZEV vehicles per year.

On the other hand, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate their vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for a consumer like me and my family.

As a potential car purchaser, I am concerned about pollution as well as the high price of gasoline. I would very much like to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

Sincerely,

Cathryn Christy

Subject: Do not allow the reduction of ZEV goals...
Comment:

Dear Board:

Now is not the time to capitulate to business wishes not to sacrifice at a reasonable level to help us reach our AB 32 mandated emissions goals. Moving ambitiously toward increasing the number of ZEVs in the state is essential, and the effort must not be significantly watered down. It is important to note, as you are certainly aware, that transportation related emissions are the largest contributors to greenhouse gases in the state.

Thanks for your attention,
Bruce England

Comment:

I would like to raise my voice in support of the ZEV program. A cleaner earth is better for everyone. If not only for saving money on health costs stemming from chronic illness caused by pollutants. I do not want to be a part of a country that is always lagging in doing what is in its people's best interest in protecting their health, as well as the planet's. I would like to be proud to be a leader in this area. That is how we stake our claim in the world, as a leader, we should probably start doing that. I think this program is a great step in the right direction.

Subject: Zero Emission Vehicle (ZEV) regulations CARB

Comment:

To the California Air Resources Board:

I formally request the California Air Resources Board not to weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but aid in the fight against global warming. Now is the time to strengthen, not weaken, these requirements.

As a potential car purchaser, I am concerned about pollution as well as the high price of gasoline. The option of purchasing a zero emission vehicle and reducing my own impact is important as I reside in Riverside County, the surrounding area has long standing history of poor air quality. This County's Air Quality or lack there of is well known throughout California.

The purchase of ZEV will be zero if automakers are only required to make 150 of these vehicles per year. Zero Emission Vehicles would be prohibitively expensive when produced in such low numbers. Also the scarcity would drive up the price above MSRP.

Hybrid Cars offered by Toyota, Honda, Lexus, and Ford have frequently sold at more than suggested retail as the demand has out stripped the supply. The resale value of these cars have remained high, at one point used hybrid models selling at near MSRP.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

Thank you for your time and consideration

Respectfully yours,

George Steven Foss

Subject: Please require electric vehicles!

Comment:

The word is that CARB is proposing requirements for ZEVs that will fall below production that is already planned by Tesla and GM alone. CARB is a leader not a follower! Set standards that will prod the car companies to produce something worthwhile. They will do as little as they can get away with unless you push them. Electric vehicles are feasible. Please do not backdown on plug-in hybrids and electric cars and please re-consider your love of hydrogen fuel cells: remember that an electric car can always get its power source from a fuel cell once that technology is cost effective/feasible.

Subject: We Need More Electric Cars, NOT Less

Comment:

It is time that California live up to its reputation of leading the US by requiring that automobile manufacturers do their part to reduce our CO2 emissions and to reduce our dependence on oil. The facts are clear. Our planet is warming up and our oil supplies are limited. We need to make changes now. Unfortunately, the financially focused automobile manufacturers have no interest in supporting this concept because it will cost them money. CARB needs to fullfill its responsibility to protect the citizens of California and not the automobile manufactures by requiring them to produce energy efficient electric cars. I think it is embarrassing that CARB's ZEV recommendations favor the automobile manufacturers over our best interest. Some might consider this corruption. Please revise the ZEV requirements!

Sincerely,
Mark J. Albers

Subject: ZEV2008
Comment:

Why are we neglecting the use of wind, solar, wave, methane, energies, which abound all around us, to power our transportation, commerce and residential energy needs at the expense of transporting half way across the world, from politically unstable nations, oil which in turn pollutes our air and water with its toxic by-products from processing and use?

It is time to overcome this insanity promulgated by the political agenda of monetary greed obtained at the expense of energy independence, cleaner air, purer water.

The time for ZEV2008 enacted full force is now!

Subject: Zero Emission Vehicle regulations

Comment:

Please do not weaken the current Zero Emission Vehicle regulations. I am concerned not only for the health of the planet but the health of us humans inhabiting it. Zero emission vehicles both reduce air pollution and help to reduce the threat of global warming. I feel it is urgent to act now. If not we threaten the future of all living creatures.

I will buy my next car with pollution as the key criterion. And a zero emission vehicle will be my first choice if I can afford it. But this choice will not be available if automakers are only required to make 150 ZEV vehicles per year.

Further, I support the staff's proposal to significantly increase the number of plug-in hybrids. A plug-in hybrid is a great option for consumers like me.

Subject: Electric car goal

Comment:

The technology IS available to mass produce electric cars at reasonable prices - see "Who Killed the Electric Car?" But like all new technologies, there are startup costs and corporations are legally required to maximize profits for their shareholders. Every new scientific study of climate change shows the impacts are worse than previously thought. The State of California, the most populous in the USA, can help save the world from the worst scenarios by both mandating electric car production in quantities that matter and offering incentives to manufacturers. Auto mechanics and gas station owners should also be helped to train for and find new business opportunities, especially in renewable energy. I know the State is in a budget crisis but the threat to civilization must be met.

Subject: Zero Emissions Vehicles
Comment:

Dear CARB,

I write today to ask that the California Air Resources Board not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. In fact, now is the time to strengthen, not weaken, these requirements.

As a potential car purchaser, I am concerned about pollution as well as the high price of gasoline. I would very much like

to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

Sincerely,
Candice Cross

Subject: Zero Emissions
Comment:

Dear CARB,

I write today to ask that the California Air Resources Board not weaken the current Zero Emission Vehicle regulations for new automobiles. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. In fact, now is the time to strengthen, not weaken, these requirements.

As a potential car purchaser, I am concerned about pollution as well as the high price of gasoline. I would very much like to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year. At such a low volume, it stands to reason the automotive industry would put a very high price tag on the ZEV vehicles to recoup their design, tooling and manufacturing costs.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me. Again, the volume needs to be raised for these vehicles to become available for the total population - not just a "limited edition series" for the privileged few.

regards,
KarenMarie Moscar

Comment:

Mary Nichols and CARB -

While not a citizen of your great state, I recognize that you are often a leader in our country. I have been following the role you are playing in moving our nation to a cleaner environment and becoming less dependent on oil. I firmly believe that allowing consumers to choose electric vehicles is a giant step in the right direction.

I urge you to stand firm in requiring the full 25,000 ZEVs that automakers had promised for 2012-2014. Further, I support the creation of a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Let us not take another step BACKWARDS in our goal of creating a cleaner country.

Sally Bolton

Subject: ZEV Regulation
Comment:

I write today to ask that the California Air Resources Board not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. In fact, now is the time to strengthen, not weaken, these requirements. Combine zero emissions vehicles with alternative energy strategies and we have multiple wins--reduces carbon emissions, cleaner environment, sustainable energy supplies, reduction of dependence on foreign oil and a foreign policy not held hostage to energy issues. We need to start somewhere and the zero emission vehicle standards can be a part of a rational strategy on the environment and energy.

Sometimes we have to take the bull by the horns and this is often the case in furthering our environmental agenda. If government doesn't push alternative energy or new transportation technologies, they will not be developed. It is a legitimate purpose of government regulation to encourage, force or entice development of technologies that serve our larger purposes. Unless CARB promotes electric vehicles, there won't be any when I want to buy one. Like many consumers, I am willing to pay more to walk my talk, but in the absence of government action, there will not be a market to support.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

Comment:

Dear California Air Resources Board:

Please do NOT weaken the Zero Emission Vehicle (ZEV) regulations. As you well know, ZEVs are all-electric cars with zero emissions.

The threat of global warming is worsening. Should California retreat on ZEV's after leading the nation in their promotion is outrageous and unconscionable. Climate change is a cataclysmic problem that we've caused by our societal habits, so that if we want to be able to look ourselves in the mirror and/or face future generations with a clear conscience, we've got to do all we can to combat it. ZEV's improve air quality and reduce CO2 in our atmosphere. Therefore, regulations supporting ZEV' have got to be strongly supported and not weakened by us.

I want to buy a ZEV to replace my internal combustion engine car, and I am certain that I am not alone! I no longer want to contribute to all of the pollution problems (from oil spills to air pollution.) that are tied to driving such a vehicle. The sooner we make ZEV's more widely available to consumers, the sooner we can slow down the factors that contribute to global warming, for the good of the earth and it's future, for us and generations to come.

Comment:

Zero-emission plug-in vehicles already produce the least CO2 emissions per mile, and this will only improve as our power generation grid becomes more climate-friendly.

Tackling global warming is all about building the right infrastructure quickly. We should be strengthening regulations that push the economy in this direction, not weakening them.

Subject: CA Zero Emission Vehicle Regulation

Comment:

Please do not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. In fact, now is the time to strengthen, not weaken, these requirements.

As a potential car purchaser, I am concerned about pollution as well as the high price of gasoline. I would very much like to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

Subject: Electric car program should not be made ineffective

Comment:

Like other consumers that live in California, I want to do my part to lessen my carbon footprint as our earth heats up. Electric car technology is here and should be funded so that it is an available option to more people. With gas prices rising and an uncertain supply left, it seems reasonable that the public would benefit if we we could become more self-sufficient. Please don't squelch this opportunity for us. There are some brilliant young and educated future electric car inventors out here!

Sincerely,

Laurel Marshall

Email Address: sahsahm@umich.edu

Affiliation: San Jose State University

Subject: Maintain or strengthen ZEV rules

Comment:

With the US EPA blocking California's efforts to control CO2 emissions in vehicles, ZEV requirements are our strongest option.

We saw progress on electric vehicles boom under the original requirements and then drop off dramatically when requirements were weakened previously. In the meantime we see customers struggling to find electric vehicles and sales of hybrids booming as an alternative, but with unmet demand for plug in versions. I support requirements for plug in vehicles in addition to other ZEVs, but there is no substitute for electric vehicles, especially in urban areas.

Sincerely

Kenneth White

Subject: ZEV standards
Comment:

To Whom This Concerns at CARB:

In this time when the causes and effects of global warming are becoming all the more obvious, it seems all the more necessary that California remain a leader in turning things around. To water down standards for the production of ZEV's, as well as to limit the numbers produced makes no ethical or ecological sense. It would also send the wrong signal to the rest of the world. It would also be another indication that we're delusional about just what we're up against. We have to be able to look ourselves in the mirror (and our children in the eye) and say we've done all we can to lower carbon emissions. The current standards are a good start in this direction. If anything, ZEV standards should be strengthened, not weakened. It isn't a drastic thing to insist on these standards; it's a cowardly and weak thing to peel them back.

Subject: ZEV Mandate

Comment:

Please do not weaken the ZEV Mandate. This is exactly the wrong time to consider doing such a thing. Battery technology is advancing rapidly. Even with today's lithium ion batteries EVs are a reality - look at Tesla and look at plans of major manufacturers such as Nissan, Mitsubishi, BMW and Mercedes that have plans to produce pure EVs in the near future.

California must continue to lead in this area. We need to maintain the ZEV Mandate!

Thank you for taking another look at this.

Subject: Proposed CARB action on the ZEV regulation

Comment:

Dear Ms. Nichols -

I am a native Californian and, although I have recently moved out of state, I continue to look to California as a model of progressive thinking and pragmatic action. I urge you to keep the ZEV program as strong as it was originally intended to be and not allow big auto companies kill the electric car - again! The twin issues of global warming and our dangerous dependence on foreign oil - or domestic oil, for that matter - can be addressed by production and sale of zero emission electric vehicles.

I am proud of my home state and my country. If CARB does the right thing after tomorrow's hearings, I can continue to feel that way.

Thank you for considering my position.

Subject: Zero Emmissions

Comment:

Dear CARB,

I write today to ask that the California Air Resources Board not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. In fact, now is the time to strengthen, not weaken, these requirements.

As a potential car purchaser, I am concerned about pollution as well as the high price of gasoline. I would very much like to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

Comment:

California Air Resources Board

Dear CARB Members,

A recent California Air Resource Board staff proposal calls for 90 percent fewer "pure" zero-emission vehicles than what California's Zero Emissions Vehicle (ZEV) program currently requires.

I don't get this, am I writing to CARB, the keeper of AB 32 or the US EPA? Is this staff report being written by the CARB staff or the car companies?

The ZEV program has been instrumental in helping to bring us the necessary technology for hybrid cars and soon to be plug-in hybrid cars, both of which are necessary if we are going to reduce global warming.

Don't yield to the automakers demands for a weaker ZEV program with loopholes that will make it ineffective. Now is the time to stand up to the automakers if you/we ever expect to get real meaningful reductions of GHGs. Backing down now sends the wrong signals at the wrong time to where we need to go and what we need to be doing to reduce GHGs.

California has passed a landmark global warming law, and the ZEV program has the potential to be a critical part of the global warming solution. Please don't back down now.

Sincerely,
David Coale
766 Josina Ave
Palo Alto, CA 94306

Subject: Zero Emission Vehicles (ZEV) program

Comment:

Please do not cut the number of "pure" zero emission vehicles currently required in the ZEV program by 90 percent. This would slash the number of such vehicles on California's roads from 25,000 to 2,500 between 2012 and 2014.

Subject: Weakening Zero emissions standards!

Comment:

Are you nuts? To even think of lowering this standard when the whole world knows the importance of stopping global warming and the dimishment of ozone depletion. We should not allow anything to harm our eco systems, our ground water, our surface water, our soils and, of course, our air.

We are the only species who actually pollutes our source of life--the air we breathe, the water we drink, the food we eat.

Think carefully: WE ARE THE ENDANGERED SPECIES!

Subject: Zero Emission Vehicle regulations

Comment:

Dear CARB,

I urge California Air Resources Board to maintain the current Zero Emission Vehicle regulations. I have switched from a gas powered motorcycle to an electric scooter. If I ever have to buy a car, I would it to be a ZEV. This option will only happen if the automakers are only required to make 150 ZEV cars a year.

I also support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced. A plug-in hybrid is a good option for those who still need to travel distances by car.

Comment:

Dear CARB,
I endorse the following letter and urge you to follow its prescriptions. I also urge CARB to start planning for the creation of a statewide infrastructure to support totally electric vehicles in our state. Parking areas with solar panels and transmission lines from windmill farms to the grid are just two items for such an agenda that should get out of the starting blocks as soon as possible.

Comment:

I agree with Tesla Motors, CEO. CARB needs to strengthen the ZEV requirements not weaken them. CARB is in a position now to show the rest of the world what one state in a free nation is capable of. Now that would be a message for democracy, clean air , and show that CA has the gonads to stand up to the oil fueled automobile industry.

Subject: Please strenghten the California ZEV regulation
Comment:

I learned this morning that the board will be considering yet another revision to weaken the ZEV regulation. This is not only unadvisable, it is unthinkable.

The government of California was created for and by the citizens, and should therefore consider the will of the citizens before that of special interests. Furthermore, the corporate special interests that stand to benefit are all based outside of California and or the USA, and at least one California based business will suffer irreparable harm (Tesla Motors).

In this time of financial uncertainty, California government decisions that are obviously detrimental to the financial well being of California and Californians not only make no sense, but are and will be (rightfully so) perceived as grossly negligent.

I have not even mentioned the health and environmental impacts surrounding your ultimate decision which are so obviously profound there should be no reason to detail those issues further at this point.

Please do not collapse to the special interests who seek to accelerate the taking of California's future. Strengthen, not weaken the California ZEV regulation and make the unquestionable statement that California cares about it's Citizens.

Subject: ZEB Goals

Comment:

The ZEV goals were once 2% in 1998, 3% in 2001, and 10% in 2003, but later CARB put off clean air progress for 14 years until 2012. As that date draws near, CARB staff proposes to delay again, by cutting the target in 2012 from 0.4% to 0.04%. The new target does not even approach the number of vehicles you have previously shown to be possible. Today we have better technology and significantly raised consumer awareness, so there is no excuse for this backsliding. Much of that technology is being developed by independents who have counted on your previous stated goals as a means of competing with the major manufacturers, who are now resisting those same goals. I ask that you put 25,000 pure ZEVs on California's roads between 2012 and 2014. If that is one fifth of the 1998 goal, but at least it is a start. Staff's proposed 840 vehicles a year is not even a start; it is an insult. Please don't allow the Zero Emission Vehicle (ZEV) Program to backslide by giving up 90% of the ZEVs promised by automakers and settling for only 2,500 vehicles from 2012-2014. We need ZEVs, and we also need plug-in hybrids. More options for consumers mean cleaner air for everyone. Thanks for your consideration.

Subject: California Zero Emission Regulations Vote
Comment:

To The California Air Resources Board:

It is imperative that California act to reduce auto emissions for several reasons: Breaking off dependency on oil sourced from any country, stopping our support of killing for oil in Iraq , cleaning California air quality (presently THE worst in the nation...embarrassing) for current and future generations, etc. This is to URGE you to stand strong with the current zero emissions regulations since they already reflect a HUGE compromise on the part of the EPA towards automakers. Please keep the ZEV program from going under the oil or hydrogen fuel cell bus!

It is time for us to take action for the sake of our planet and its inhabitants instead of for profits. You KNOW what's right or you wouldn't have voted for any emissions regulations to begin with back in 1990.

Please vote no on these new amendments.

Thank You For Making THE Intelligent Choice,
Dawn Paoli

Subject: ZEV Regulations
Comment:

Dear CARB,

I write to ask that the California Air Resources Board NOT weaken the current Zero Emission Vehicle regulations. Zero-emission vehicles not only reduce air pollution, but help in the fight against global climate change. Now, more than ever, is the time to strengthen - not weaken - these requirements.

As one planning a vehicle purchase within the next two years, I am quite concerned about pollution, as well as the price and availability of fuel. I would very much like to have the option of purchasing a zero-emission vehicle, thereby reducing my own impact in these areas. This is extremely unlikely to come to pass, however, if automakers are only required to make a mere 150 ZEV vehicles per year - this in the most motor vehicle intensive state.

Finally, I fully support the staff's proposal to significantly INCREASE the number of plug-in hybrids that must be produced, and appreciate staff's vision in including these cars within the ZEV requirements. Plug-in hybrids are an excellent option for the vast majority of consumers, such as myself. The next step, of course, will be all-electric plug-ins, such as the Tesla Roadster, which though far too expensive for the motoring public at present, will become affordable as mass-production takes hold.

Thank you for your consideration.

Very truly yours,

AJ Averett

Subject: Keep Electic Cars Coming

Comment:

I am writing as a concerned citizen of Los Angeles, Ca. Over the last 4 years that I have lived in LA I have seen the rise of the Prius and gas prices by more than \$1 a gallon. While I do not disagree that the increase in Hybrid and electric vechicles is due in part to the rise in gas prices, I also think that the public is becoming more aware of the huge strain gas burning vehicles put on the health of our planet and our own personal health.

Some of this desire to aviod gas burning vehicles has lead consumers to pursue the highly praised grease car. While these cars reduce the need for gasoline to zero,a good thing, research has shown that the emmissions given off by many of these cars are more detrimental to human health then those of gas burning vehicles.

Don't you think it is vital to support developed and regulated technologies that can support economic, environmental and human health needs?

Please continue to support electric and hybrid car research and development and encourage your peers to do the same. The people will always find a way to get what they need, but I would rather that it was supported by the government we vote into office to provide that support in the first place.

Thanks,

Kristy Baltezore

Subject: Amendments to California Emission Vehicle Registration

Comment:

I'd like to be more subtle, but really, all I can say about weakening these standards is simply this:

ARE YOU CRAZY?!?!?

I can always tell when Spring has finally settled in: The beautiful snow-capped Sierra Nevada Mountains are no visible from points in Sacramento where I have been able to see them.

As I drove to work in my Prius--you see, I am doing my part--I observed a beige horizon. I was almost in Roseville before I could see the mountains--and then not as clearly as I should be able to.

By Summer, it won't be blue skies overhead. The skies are usually beige.

I understand that beige is a neutral color and goes with everything, but it doesn't go with the air I breathe and it certainly destroys natural beauty.

Subject: California Zero Emission Vehicle Regulation
Comment:

Dear CARB,

I write today to ask that the California Air Resources Board not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. In fact, now is the time to strengthen, not weaken, these requirements.

As a potential car purchaser, I am concerned about pollution as well as the high price of gasoline. I would very much like to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

Subject: Don't weaken ZEV regulations!

Comment:

California should lead the way (as it almost always has) in new, cleaner technology. I urge the California Air Resources Board not to weaken the ZEV regulations. Automakers need the extra incentive to produce zero emission vehicles.

We need to be doing everything in our power to address the problems of pollution and climate change. Since automobiles are a major contributor in these areas, it is imperative that we make them cleaner and more efficient.

Respectfully,

Steve and Karen Spiegel
Burbank, CA

Subject: Global Warming is happening now!

Comment:

I am asking the California Air Resources Board not to weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. Just last month a chunk of Antarctic ice seven times the size of Manhattan broke off. We've seen what the melting of Arctic ice has done to polar bears and we're about to see what the breakup of Antarctic ice will do to penguins. We need to be taking more action to slow global warming, not less!

My family owns two Toyota Priuses and one fuel efficient Honda Civic because we are concerned about pollution as well as the high price of gasoline. I would very much like to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

Subject: One step forward, two back?
Comment:

Dear CARB,

Please do not weaken the current Zero Emission Vehicle regulations.

Zero emission vehicles not only reduce particulate air pollution, but help reduce green house gases. We should be strengthening these requirements, not reducing their effectiveness.

As a soon to be car purchaser, I am already looking for options in order to purchase the lowest impact vehicle I can find. If automakers are only required to make 150 ZEV vehicles per year, that would certainly put a ZEV out of my financial reach, but would keep ZEV's out of my reach for years and years to come.

I fully support plug-in hybrids, and find that to be a very intriguing option.

Sincerely,
EA Schweitzer

Subject: ZEV Regulations
Comment:

My daughter Audrey was nine when we were forced to give up the EV1 electric car we had been privileged to lease.

She said that she never wanted to drive a car that used gasoline, and asked if there would be electric cars available when she was old enough to drive.

I said I wasn't sure, but that the EV1 was only made because people at CARB had required it, and that the future of zero emission cars would be dependent on the diligence and courage of the people at CARB as well.

I explained that, though I was convinced that many, many people would choose to buy and drive ZEVs, as consumers we can only choose from what is offered to us and in the case of Electric cars manufacturers on their own have proven unwilling to give us that option.

Audrey will turn fifteen this fall. She is a straight A student, and someone keeps leaving the Tesla Motors site up on my browser. I could use some help here.

Seriously, we all need your help. Please do not allow any further weakening or delays in the implementation of ZEV regulations.

Jim Hannigan

Subject: ZEV regs
Comment:

Dear CARB,

I write today to ask that the California Air Resources Board not weaken the current Zero Emission Vehicle regulations. Zero emission vehicles not only reduce air pollution, but help in the fight against global warming. In fact, now is the time to strengthen, not weaken, these requirements.

As a potential car purchaser, I am concerned about pollution as well as the high price of gasoline. I would very much like to have the option of purchasing a zero emission vehicle and reducing my own impact in these areas. This is unlikely to come to pass, though, if automakers are only required to make 150 ZEV vehicles per year.

Finally, I fully support the staff's proposal to significantly increase the number of plug-in hybrids that must be produced and appreciate staff's vision in including these cars in the ZEV requirements. A plug-in hybrid that has an all-electric range, but that also runs on gasoline when the battery is empty, is a great option for consumers like me.

Sincerely,

Subject: Save the electric car
Comment:

Dear CARB board,

Consumers are ready and willing to adopt this technology. It is a question of good, available products vs. lack of demand. There was a recent study of Prius owners (which crossed 1M vehicles last year) and 80% of the buyers thought of it as an electric car.

As the agenda setters in this space for the US auto market, please be bold. The world needs this shift and the technology is close enough that with the right prompting the market will develop.

Regards,

Bob Bliss

Subject: ZEV
Comment:

On March 27, the California Air Resources Board will revise the history-making program that put more than 5,000 Zero Emission Vehicles (ZEVs) on the road.

But their staff has issued a proposal that, instead of propelling our country ahead toward a pollution-free future, will profoundly weaken the program once again. This proposal would require automakers to produce only about 150 ZEVs each per year through 2015—which amounts to less than what these influential regulators mandated in 2003.

Please urge the Governor to ask the board for a stronger proposal that puts more ZEVs on the roads, and helps move California toward the future.

Subject: proposed amendments to ZEV regulation

Comment:

The proposed amendments, essentially gutting the program no matter how it's spun, are completely at odds with the true current state of technology as well as sending the wrong signals to companies that have been working hard to bring forward-looking technology to market. They make ARB look like solely a tool of the mainstream auto industry, which is trying to wring as many sales as possible out of its earth-destroying dinosaurs. Is this what you want your policy to be? I don't think so! You have been doing great work in other respects, and this is truly dismaying. We need to work with a mix of ALL non-fossil-fuel possibilities.

Subject: Electric cars are very important to our state

Comment:

I urge you to give full support to electric and plug-in hybrid vehicles -- your requirements will force manufacturers to produce these vehicles. People will buy them if they exist -- I see 2 - 3 times as many Prius' on the streets as I did a few years ago.

We have no time to waste - we are on a time clock of 10 years or less to turn around our greenhouse emissions. It is your RESPONSIBILITY as leaders to require very strict guidelines for increasing the number of electric vehicles and plug in hybrids that are required on our roads.

As Al Gore said in An Inconvenient Truth, will our descendents look back and say "what were they thinking" when they didn't act responsibility, or will they say "How did they find the courage" to do what needed to be done.

It's up to all of us, but you have a very special responsibility to your fellow citizens
