Comment:

We need to start regulating (mandating) the elimination of all greenhouse gases. Only the government can produce real change. Talk talk talk is all we get, 2022 was the highest release of climate warming gasses in the history of the world. I don't think 2023 will be any less and most likely a new record. All we get from our leader (that is a laugh), is talk about economic growth. The economy is being wrecked by climate change. How much are we spending (creating more greenhouse gas) on rebuilding after every disaster? And spending will continue to rise untill unsustainable. This is the definition of insanity. All hope is lost. I give up :(Sincerely, Michael Sutton

Comment:

I support CARB's efforts to reduce methane and co-pollutant emissions from oil and natural gas production, natural gas gathering and boosting, processing, and storage. I urge CARB to approve the the proposed amendments to the Greenhouse Gas Emission Standards for Crude Oil and Natural Gas Facilities and continue to identify and implement policy changes to mitigate climate change.

Subject: oil and gas regulations

Comment:

I am a retired RN/PHN who has asthma. I grew up in Los Angeles before the EPA, which is the probable cause of the damage that resulted in my asthma. Please create strong oil and gas regulations. our addiction to fossil fuels must end immediately if we are to have a climate in which we can survive. It is a serious problem that oil and gas emissions are causing physical health harm to millions. Asthma, heart disease, stroke, diabetes, preterm babies, low birthweight babies and all the additional health care and suffering directly resulting from mining, refining and burning of fossil fuels.

Every year we have more emissions than the year before. It is literally killing humans and the other species in our ecosystem. We are in great peril!

Your work at the CA Air Resources Board is critical to slowing climate change and stopping the damage to our Hearts, lungs and future generations. Please create regulations to prevent the damage to our future.

Subject: Proposed Amendment to Green House Gas emission

Comment:

My husband is a physical chemist and I am a health care provider. We both strongly endorse the Proposed Amendments to the Greenhouse Gas Emission Standards for Crude Oil and Natural Gas Facilities (oilgas2023.) We also endorse working closely with workers who actually run the facility (rarely done and vastly under appreciated) as well as managers.

Solutions can meet the goals of the CARB and on the ground workers and managers but only if all of these groups are involved at the beginning.

Part of the opposition to government involvement is the failure to include FROM THE BEGINNING and through all phases of a project. Asking for this involvement when the project has completed developed means input from workers and management will encounter resistance and unwillingness to make any suggested changes.

Comment:

As an environmental health, sustainability professional, i support the proposal to increase carbon emissions controls in the extraction industry to protect public health and mitigate climate change. This mitigation is urgent and critical to slow the progression of climate change and maintain a viable planet for us and our children.

Subject: Greenhouse Gas Emission Standards for Crude Oil and Natural Gas Facilities

Comment:

I whole-heartedly endorse all of the proposed amendments to the CARB Greenhouse Gas Emission Standards for Crude Oil and Natural Gas Facilities. Methane is an especially problematic greenhouse gas and steps to further minimize its release are long overdue. Now that we have the means, via a satellite imaging and other new technologies, to monitor compliance, it is imperative that we do so and that industry comply. We cannot and must not allow any further rise in global warming (see attached PDF). Thank you for listening to my opinion.

Comment:

As a resident of California, and a long time supporter of our standard setting emissions requirements, I am writing to ask that our state continue to go above and beyond federal standards. As recent events have shown these industries are unable or unwilling to 'self-regulate' safety, emissions, containment, nor best practices-I believe our state can and should do better than the federal departments who are understaffed and underfunded. There has to be real consequences or there won't be compliance. These companies make billions at our expense, and they consider small fines to be a part of doing business. This is unacceptable. I hope that the newer technology will allow for consistent, industry wide monitoring. Will the state be following up on notifications? Will there be on-site confirmation of actions required of offenders? Our residents can't continue to assume these greedy industries will do the right thing; not when they've proven themselves incapable. Thank you for your consideration.

Comment:

Note: This comment was uploaded to the docket by CARB staff on behalf of the commenter (comment was received via email).

"Hi Elizabeth and Rajinder, please see attached word document for suggested edits to the proposed O&G amendment with supporting rationale. We tried to keep it focused (changes in red font). Happy to elaborate when we talk. For reference, I'm also attaching the Carbon Mapper/RMI joint input to EPA's O&G Supplemental rule. I think our comments on EPA's proposed Super Emitter Response Program may have some overlap with CARB's program but I'm not suggesting that it be expanded further.

Cheers,
Riley"

Subject: Regarding §95669.1 - Remotely Detected Emissions Plumes

Comment:

- The burden of maintaining on-call status with a third-party contractor or internal staff who may conduct a method 21 survey in the given timeframe triggered by a notification under this rule is immense. We believe the financial and logistic burden of this section may adversely affect compliance rates of operators.
- We are deeply concerned that this section poses a threat of abuse by third parties. The proposed text does very little to outline the QA/QC process of data validation or procedure used to correlate an emission event to a facility. A third party intent on causing an outsized administrative burden on operators could selectively report emissions events to target given operators.
- The nature of narrow lease spacing in the oil fields of California are likely to result in mis-identified facilities, or worse, CARB notifying multiple adjacent operators of the same emission event. There is no language to prevent a scatter-shot of reports to lock down entire fields
- The proposed text does not set a leak rate threshold for reporting, thus allowing for any and all remotely detected emissions events to be reported to an operator. Further, if there is no threshold for reporting, operators may be mobilizing survey teams for marginal emissions events from protracted distances to respond leaks of lesser impact than the scope 2 emissions created by vehicle mobilization.

Subject: 15-Day amendments to the Greenhouse Gas Emission Standards for Crude Oil and Natural Gas F

Comment:

On November 2nd, 2023, the CARB published proposed the 15-Day amendments to the Greenhouse Gas Emission Standards for Crude Oil and Natural Gas Facilities or California Oil and Gas Methane Regulation (COGR). The Western States Petroleum Association (WSPA) appreciates the opportunity to comment on the proposed amendments. We agree with most updates to the COGR that were made from the 45-day version. However, WSPA is concerned about some key issues summarized in the attached comments. Thank you.

Subject: Regarding §95669.1 - Remotely Detected Emissions Plumes:

Comment:

- CARB to develop a mechanism to track and publish quarterly for each 3rd party reporter:
 - Name and address
 - Number of reports made in previous quarter
 - Number of reports which proved fruitless
- 3rd parties should be assessed a penalty for reporting more than 3 non substantiated or misattributed plumes in any month and the 3rd party should be suspended from reporting plumes for 90 days
