Subject: proposed standards for petroleum processing facilities.

Comment:

As we've learned over the recent past, methane in particular, is 20-40 times more potent in terms of atmospheric heating than CO2. I would also say that capturing methane, rather than burning, or allowing it to escape makes great sense.

Also, as the industry has recently admitted, it was well aware of the relationship to climate change. This fact is a tacit admission of responsibility. I believe it is time to stop all future leases to any processor that is unwilling to accept responsibility, and help remediate past mistakes.

Thank you , Gary Overby

Subject: Clean air and water

Comment:

If anything we need to keep tightening the regulations so all can be assured their air and water are clean and safe for our health. I would really love for my two grandchildren to be healthy in their future and nothing is allowed to encourage slackers who don't care about a healthy future. I don't think our air and water can be too clean and safe, there must be no doubts.

Subject: recovery of gas leaks
Comment:

What has been done to help the victims of the Porter Ranch, Los Angeles. Ca gas leak? The only things I've heard is that it has gone on for a long time, residents were injured and denied just compensation for those injuries, and nothing has been resolved. This issue shows how little is being done to protect people in Ca from infrastructure issues. Oil and gas industry is uninterested. I hope you will put teeth into any new regs and enforce those regs.
