Subject: Zero Emission Trucks May Not Be Zero Emission
Comment:

Please address the entire life cycle of Zero emission trucks.

1) How will the energy produced to power all these trucks and cars affect the environment? Solar and wind can only go so far.

Zero emission trucks are not zero emission if the source energy and distribution system is not zero emission as well.

Where will the massive increase in electrical power come from and at what environmental and economic cost?

3) How will we recycle all of these "hazardous materials" at the end of the equipment life. What is the environmental and economic costs to reclaim these vehicles including the batteries?

Today nearly 95% of vehicles are easily recycled. Battery driven vehicle recycling challenges need to be addressed.

Zero emission is not zero emission if these two issues won't allow for it.

Near zero emission with natural gas may be a better net value when all sources are included in the analysis.

Please address the important considerations above.

Subject: The need for a sustainable battery approach

Comment:

For last 30 years, ARB has been promoting battery technology as a means to reach zero-emission goals. As a scientist who previously worked at South Coast AQMD, and was directly involved in launching the battery technology by providing key technical materials to ARB for its 1990 ZEV regulation, and later under Dr. Alan Lloyd, demonstrated the feasibility of hydrogen fuel cells in mid -90s, I am really concerned.

ARB is not addressing the significant battery waste pollution generated by the huge number of battery vehicles being proposed. AB 617 communities will be directly impacted - adversely. These concerns are addressed in more detail in the attachment. To be sustainable, ARB should identify non-cobalt sustainable battery chemistries and be more explicit in its support for hydrogen fuel cells.

Subject: proposed clean fleets rules
Comment:

I am a small business I got rid of a 1998 14,500GVW diesel to comply with the current regulations. I bought a new dump truck to replace the old one and was told as long as its a 2010 or newer vehicle there will be no further requirements to replace the new vehicle and here we go again..... As a small business i received no help paying for the new vehicle which was a \$45,000 hardship!! I cant afford to do that again. I'm 60 years old and don't do enough business to justify replacing the truck again. By the way my old truck is still running strong across the border in Oregon so my \$45,000 hardship has not changed a thing. This is so frustrating and makes me want to vote for politicians like Trump!

I was told my new truck would be good for the life of the truck.

I'm all for clean air but lets phase out old vehicles when they wear out or allow for low use vehicles so we have a history and a supply of Vintage vehicles in the future. you couldn't do this with cars because of the backlash but us small contractors don't have a lobby to defend use or help get us replacement funding like the larger trucking companies have.

Sincerely, John Nilsen

Comment:

Ridiculous rules from the power hungry idiots that are and have been in charge of CA for the last how many decades. It should be no surprise that the same state that cannot keep the lights on due to stupid decisions regarding electrical grid capacity and power plant shutdowns (read - reliance on poor "renewable" energy sources like solar) are now trying to implement electric fleet vehicles which will need to be charged by this same electrical grid. When the power density of fossil fuels (gas/diesel) can be had by batteries and the market demands them, then this should be a discussion. Until then, put tax money into research for alternative fuel sources instead of artificially moving the market on the backs of the middle class through subsidization to buy vehicles that are not wanted but mandated. Socialism at its finest. Amazing. I guess until every person with common sense leaves CA for better (read "red") states, this is the life that we have.

Subject: Advanced clean fleets proposed regulation
Comment:

As a career professional truck driver this proposed regulation would cripple alot of the smaller trucking fleets who will not be able to afford to convert to zero emissions vechiles. It will also force alot of trucking companies to move out of state. Which would cause California to loose money in state taxes, registration and licensing fees. Im not sure if this proposed regulation also includes out of state trucks entering our state you will cripple or economy causing massive shortages in goods. Please reconsider what you are doing. We already lead the country in unrealistic and over the top regulations.

Subject: Public Fleet Exemption under 95693.2

Comment:

To whom it may concern:

We are public agency and provide emergency response to support water and wastewater to our customer in the San Diego area. In the proposed regulation and exemption under 95693.2 the language is not very clear since it does have two paragraphs for a public agency to apply for an exemption. Can you provide more clarification? specifically as it relates to emergency response, we need to have a fleet that is readily available to respond and maintain water supply and infrastructure integrity to our region. We are concerned that rolling blackouts and power outages would inhibit our response if we have ZEV in our fleet. we also noticed that under the exemption 75 % of the fleet needs to be ZEV in order to obtain an exemption. Thank you for your consideration.

Respectfully,

Charles Mederos

Subject: Reporting date for Advanced Clean Fleets

Comment:

Phyllip Nguyen asked on the Q&A during the ACT workshop if the fleet reporting date can be changed to April 1 since other regulations have March 1 deadlines. I'm seconding that request.

I handle annual NPDES wastewater reporting to the State Water Resources Control Board for a large drinking water utility that will fall under the High Priority reg, and have to prepare over 50 reports that are due on March 1.

Thanks

Comment:

Hi,

Thank you for answering questions and listening to comments at today's workshop for ACT & ACF.

I would like to request that more is spoken about the option of converting existing trucks from combustion to electric vs. just buying new ZEV. Many of the CARB certified electric powertrains we are currently using on new OEM cab/chassis will work identical for older models. For example Isuzu NPR is the identical cab/chassis from 1990-present. So, the package we currently install on new applications will also work on older trucks. This helps cut the cost in half and reusing the previous truck is a lot less wasteful. The end result is the same achieving zero emissions.

Kind regards,

Jeramy Ostrander
EVC

Subject: Comments on ACF Rules

Comment:

Hello,

It is in all of our best interests to make implementation of these new regulations successful. If we fail, it will open the door to another generation of diesels on our roads - and in our lungs.

Please consider the following.

I think we need to re-define NZEV. As it stands, NZEVs with electric only miles do not exist, and development of the concept trucks will not be profitable or even likely if sales will be limited to public fleets and then ended in 2035. Also, just because a vehicle can be plugged in, doesn't mean it will be. RNG powered trucks eliminate PM emissions now, have negative GHG profiles, and in the case of 0.02 g/b-hp, can reduce NOx significantly, now.

In the case of fleets providing a public service critical to the public's health and safety, I think we need a class of exemption for "utility critical response vehicles." The use of "emergency vehicle" is already taken, and could be confusing.

Please do not hesitate to reach out to me if I can provide any details on the LACSD RNG fleet or critical response vehicles.

Thanks!

-Diane

Subject: Worker misclassification must be addressed
Comment:

California needs an Advanced Clean Fleet standard that achieves 100% pollution-free truck sales by 2035 at the latest, closes the drayage loophole, and mandates the retirement of old trucks.

These components will help California take a huge step forward in cutting pollution from the transportation sector, the state's #1 source of greenhouse gas emissions.

In addition to addressing California's worsening climate crisis and improving the health and quality of life of low-income communities, an Advanced Clean Fleet standard that ensures 100% of new truck sales are pollution-free by 2035 can address the chronic exploitation of truck drivers by fleet owners. Now is our chance--as we clean up polluting trucks--to clean up unfair labor practices that harm families and hinder the transition to an all-electric truck fleet.

One of the major barriers to the successful implementation of new clean truck standards is the common trucking industry practice of classifying (and often misclassifying) truck drivers as independent contractors rather than employees. Misclassification is widespread. Over 500 Labor Commission investigations found trucking companies misclassified drivers to benefit their bottom lines with unfair labor practices. Furthermore, it continues to be the dominant model in port drayage, specifically (up to 90% of operated vehicles), and other trucking sectors such as last-mile delivery, long-haul, and specialized short-haul segments.

Misclassification impedes compliance with California's climate and clean air goals. As a result of the systematic barriers misclassified truck drivers face, only 61% of contracted drivers meet California's Truck and Bus Emissions Rule (in comparison to 83% at large fleets). This is an equity issue for drivers who tend to be from low-income communities and communities of color, who disproportionately bear the economic and health burdens of polluting technologies. It is also an equity issue to the cost effects on compliance. Low compliance with clean fleet rules are due to misclassified drivers being unable to afford to upgrade to cleaner, more efficient trucks. This in turn leads to higher particulate matter pollution, mainly from diesel-powered trucks, that are concentrated in communities of color where ports, railyards, and warehouses are located.

The advanced truck fleet standard presents a once-in-a-generation opportunity for CARB to address the exploitation of truck drivers, which would revitalize local economies and improve health and living conditions in environmental justice communities. Misclassification must be addressed by maintaining a database of all drayage fleets, using the "common ownership and control" definition to identify the "fleet." CARB should also work with the California Workforce Development Board to require a high-road labor criterion as part of the proposed ZEV Fleet Certification.

Subject: Strengthen the Advanced Clean Fleets Rule
Comment:

Dear Chair Randolph, Executive Director Corey, and Members of the Board,

We, the undersigned, are 298 concerned California residents and Dream Corps Green For All Supporters writing to urge you to pass a regulation that achieves 100% zero-emission truck sales by 2035. Dream Corps Green For All (GFA) is a national social justice nonprofit fighting for a world that is green for all, not green for some. GFA works at the intersection of the environmental, economic justice, and racial justice movements to advance solutions to poverty and pollution.

Low-income communities and communities of color have long-breathed in toxic diesel pollution from the medium and heavy-duty vehicles on our roads at disproportionately higher rates. And our communities are already feeling the effects of climate change: from hotter, drier days to the unbearable smoke and devastating flames of increasingly worse wildfire seasons. CARB's own analyses have projected that a rapid transition to 100% zero-emission trucks by 2035 is necessary to reach California's climate and air quality goals.

We strongly encourage you to phase out the production of new diesel vehicles by 2035 and ramp-up targets to get there. I also urge you to provide support to small businesses and workers in adopting zero-emission trucks to ensure a just transition for all.

The potential benefits of committing to 100% zero-emission truck sales by 2035 are significant and must be set into motion now. A strong rule can prevent numerous premature deaths, improve quality of life for communities with respiratory or cardiovascular issues due to air pollution, reduce health costs and missed workdays, and generate thousands of clean jobs. Please achieve 100% zero-emission truck sales by 2035 to bring cleaner air to our communities as soon as possible.

Sincerely,
[see attached]

Subject: Fleet
Comment:

I have been working on federal fleets for 31 years. We have spent millions to retrofit our fleets to meet the California standard. The Air Force had hundreds of vehicle that are used a couple times a year to support launches and we put DPFs on them to meet the standard since these 1980s vehicles could not be reproduced for less than the cost of the filter systems.

Now I work for the Forest Service. We have 5000 vehicle in California. We pushed up the dates to replace old fire engines to comply with the fleet rules prohibiting many of our vehicles. Next we need to figure out how we will get low or zero emission vehicles that can function for weeks at a time while pumping hose lays. It's already difficult when a truck shuts down because it was idling or failed regen while providing water to dozen of firefighters.

I ended up in this job 10 years ago when the state cut the funding for the school bus programs. Having a bus, now a propane/hybrid, hauling 40 kids across town may cost the state a few hundred dollars a day. But having 40 vehicles drive the same distance in the traffic they create, along with the damage to infrastructure and stress on Law Enforcement must be significantly higher. Multiply that by 10 for every school in the state.

First Name: Henry
Last Name: Rogers
Email Address: henry@greypinegroup.com
Affiliation: HAIC

Subject: Comments on CARB Advanced Clean Fleet Workshop on September 9, 2021
Comment:

The Harbor Association of Industry & Commerce (HAIC) is a non-profit industrial and commercial trade association that serves as a united voice on transportation, energy, environmental, and land use issues affecting the harbor business communities. In response to the California Air Resources Board (CARB) September 9, 2021, workshop on the Advanced Clean Fleet (ACF) rule, we refer to earlier comments submitted on March 17, 2021:

1. We would like to see a clear distinction between short-haul and long-haul heavy-duty (HD) trucks.
2. Allow for the accommodation of H2 fuel cell (H2) Zero-Emission Vehicle (ZEV) technology as one of the options for long haul trucks in upcoming drayage truck rulemaking and incentive programs.

Additionally, we are submitting comments on the CARB ACF draft rules and Total Cost of Ownership (TCO) document published on August 25, 2021. This comment letter evaluates both the CARB rule language and the cost calculations used to justify the timing of rule requirements. We have concerns about the acceleration of the rule schedule resulting in high costs in the early years and a disproportionate cost burden on the fleets that are part of the early compliance (drayage trucks and others).

In the battery-electric (BE) truck calculations, we have identified several factors increasing operational cost to short and long-haul operators, including the need for multiple charging stations and extra labor hours. To the extent that H2 trucks are considered as an alternative because of their higher suitability for long haul truck applications, it will be necessary for both H2 truck and H2 fuel production technology to be competitive with BE and diesel technology. Otherwise, the ZEV burden for long-haul trucks will become infeasible.

 

BE and H2 Vehicle Purchase Price:

The current (2022 delivery) BE truck purchase price is three times the purchase price of an equivalent diesel truck, based on HVIP references and other published sources (including SCAQMD). The assumption that the new BE truck purchase price will drop significantly by 2025 due to manufacturing efficiencies; such a price drop is unlikely.

For H2 trucks, the assumed purchase price decline is even more significant. The H2 truck price is currently approximately 4.0 times the purchase price of an equivalent diesel truck, based on extrapolation of vendor information found on the HVIP website. This translates to a price drop by a factor of 2.5 in three years (from 2022 to 2025), which again seems unrealistic.

H2 Fuel Purchase Price:

In the ACF TCO document, a chart showing H2 fuel price reaching \$5/kg in 2030 and remaining at that level afterward indicates that this is based on a quoted price projection. The \$5/kg is a price

target for H2 trucks to be competitive with BE technology, not a price projection for 2030. The current H2 price is well over \$10/kg based on ARB's TCO document and other published sources (available upon request). Such a price drop (from \$10/kg to \$5/kg) is unlikely by 2030. We would recommend that CARB remove the assumption and change the rule timing for long-haul trucks.

As we further hone our environmental standards, we would like to see minimum performance standards for BE and H2 trucks, just as fuel efficiency standards have been set for other vehicles in the past. California has lofty climate goals, and the State has been the leader in green technology. We appreciate CARB's efforts in the rulemaking process and ask the Board to consider these comments on the need to consider H2 fuel cell technology for long-haul drayage trucks. I appreciate your attention on this matter, and we look forward to working with you to achieve a greener California.

Sincerely,

Henry Rogers
Executive Director
Harbor Association of Industry & Commerce

Subject: Simplify the Advanced Clean Fleets Program
Comment:

Twelve years ago, our organization assisted hundreds of independent truck owners with the process of applying for the Diesel Particulate Filter grant program. It was a very difficult and complicated process for the owner/operator community, many of whom were less than proficient in English. The application documentation was particularly difficult.

We strongly encourage CARB to design the ACF incentive program to be as simple as possible for applicants. The H-FIT program has been very popular with the industry and quite successful in getting ZE yard tractors into use at the Port of Oakland. The OEM vehicle providers will get the lion's share of the funding, so let them handle the paperwork for the purchasers.

We feel that getting ZE trucks on the road quickly is more important than proving every mile of usage.
Thank you, Brian Beveridge - Co-Director

First Name: Jeff

Last Name: Wood

Email Address: jewood@parelectric.com

Affiliation: Utility Line Contractor

Subject: Advanced Clean Truck Rule

Comment:

Greetings, I am commenting to make sure that staff understands the challenges utility line contractors will have with the ACT Rule. Please know that our company is in support of clean air goals and environmental stewardship. I recommend for crane trucks and other HD vehicles that will be working in mountainous terrain and other challenging backcountry areas, should be exempted from the ACT Rule. The reason is that at this point and time there are no ZEV's available that can operate in these areas. These vehicles simply perform too many heavy duty functions and will surely be unable to recharge or operate from remote mountainous areas. There will be no battery charging infrastructure close by and the EV's would not be able to run the equipment that is currently powered by the existing low emissions diesel engines - 2010 and newer. Should a ZEV lose charge voltage in one of these areas the cost and time delay would be unmanageable. It is probable that ZEV's just driving to these job sites would be difficult. We must find a way to exempt operations that will be building, repairing and engineering our renewable transmission infrastructure for our State. I do believe it makes good sense for some applications throughout California to move toward the ZEV goals but the application of building and maintaining our energy transmission infrastructure needs to be exempted from this rule at this time. Respectfully, Jeff Wood

Subject: Backup Vehicle Exemption

Comment:

In the proposed changes to heavy vehicles, the discussion of backup vehicle exemptions included proposals to require snap tests every 6 months instead of annually.

This fails to recognize that backup vehicle exemptions limit those trucks to being driven no more than 1000 miles per year. Thus a snap test every six months would require a test every 500 miles, or less than one tank of diesel fuel. This would put an undue hardship on the owners of these trucks due to the high cost of the snap tests on older trucks. In our case the tests are \$160 per truck because we cannot drive them into Bakersfield since this would require 100 miles roundtrip, thereby greatly reducing the mileage the truck can be driven. Also, there is little likelihood that there would be significant reduction in emissions through increased monitoring due to the low mileage involved.

The mileage limitation originally was imposed to accomplish two purposes:

- 1) Reduce the overall emissions from the trucks by greatly restricting their mileage.
- 2) Enable small businesses to continue using equipment that they could otherwise not afford to replace.

Increasing the frequency of snap tests on these vehicles to every 6 months would put additional burdens on small business owners, driving them out of business.

Chris Hall

Subject: why exempt workover rigs?

Comment:

The current draft proposal exempts oilfield drilling and workover rigs, presumably because it would be difficult to build or buy a zero emission drilling vehicle. But state policy, reflected in a raft of statutes, regulations, and executive order is contrary. In countless ways, California law seeks to replace petroleum with alternative fuels. See, e.g., Public Resources Code 25000.5. The Governor's Executive Order N-79-20 directs CARB to protect Californians from the impacts of petroleum fuel use, by phasing out the sale of internal combustion vehicles, and directs CalGEM to more vigorously protect Californians from the impacts of oil extraction.

The State having identified petroleum as the problem, why do we want to make it easier or less expensive to pollute our air while extracting a product -- oil -- that is targeted for replacement??

First Name: Ron

Last Name: Nuss

Email Address: ron@nwexc.com

Affiliation: Northwest Excavating, Inc.

Subject: Advanced Clean Fleets Regulation

Comment:

Dear Chairman Liane M. Randolph and Members of the Staff:

Thank you for giving me the opportunity to write to you today. I am the head mechanic for Northwest Excavating, Inc. a family owned construction business in Southern California employing families and supporting local businesses for more than 50 years. It's difficult conducting a construction business in California due to the regulations in our industry. As you know we have spent millions to comply with the Off-Road Diesel Regulation, On-Road Diesel Regulation and PERP not to mention other State and local agencies.

I would like you to please consider removing the 3/4 ton work truck from the Advanced Clean Fleet Regulation. The construction industry is different from the standard trucking industry. Our problem is we would not be able to charge these vehicles at our terminal / home base because the foreman and operators drive these vehicles to the jobsite then home every night. We would be asking our employees to install charging stations at their personal residents, If that were even possible. Also they would have to be compensated for the added cost to their electrical bill. Some jobsites are more than 100 miles from their home. The other problem is construction jobsites only have temporary power. To charge ZEV trucks the contractor would have to install a diesel generator and a charging station. If nothing else please consider pushing back the implementation of the 3/4 ton work truck to a later date until more infrastructure will be available to support these vehicles. The construction industry will be the ones building this infrastructure. It would be nice if we could use our existing low emission trucks to do that for our community.

Please consider what I have proposed and thank you for your time.

Sincerely,

Ron Nuss

Subject: News and Emergency Information

Comment:

Communities rely on our radio and television stations to be their minute-by-minute resource in emergency situations. Often stations will go commercial-free for many hours and sometimes days for around-the-clock coverage of wildfires, floods, etc. from remote or secured areas.

The CBA is concerned that even with significant improvements in technology and reductions in cost, electronic vehicles may not provide the flexibility that vehicles used in the broadcasting industry demand: vehicles can be assigned to travel both short and long distances; can stay on location for extended periods of time without returning to base; locations can vary from urban to remotely rural; and fuel delivery is currently integral to maintaining operations while on locations.

It would be helpful for those industry professionals that do remote, extended location-based work, if you could address how the Board predicts electric vehicle technology will advance to comply with the rules as written. As you can imagine, the locations for the situations we cover are unpredictable and often without power as a result of the emergency. These and other remote locations are reasonably expected to lack charging infrastructure for quite some time.

Subject: We need zero emissions ships, shut down pollution
Comment:

Dear Chair Randolph and Members of the Board,

Ships are one of the worst air polluters in California, and harbor boats are one of the top three cancer risks for Californians living near the ports of Los Angeles, Long Beach, San Diego and Oakland. California must stop investing in diesel operated harbor boats and instead invest in clean technologies and jobs.

The technology exists to transition commercial harbor craft to 100% clean fleets today. Already, there are over 300 operating zero-emission ships powered by batteries worldwide, with another 194 on order.

Given the climate emergency that we are facing, we need bold climate leadership. I'm asking you to strengthen the Commercial Harbor Craft rule:

1. Require a 100% zero-emissions transition for the majority of harbor boats by 2035, including tugboats and barges, which are excluded from the current rule
2. Add language to allow the Board to revisit the rule as the zero-emissions boat market evolves to ensure the regulation achieves maximum emission reductions
3. Increase funding for zero-emissions boat pilots and retrofits to spur innovation

This is a critical time to protect the health of port-side communities, Californian families, and our environment.

Thank you for your attention to this important issue.

Subject: We Must Clean Up Harbor Boats

Comment:

Harbor boats - including ferries, tugboats, and barges, and more - fuel health and cancer risks in California's port-side communities. In fact, just one sportfishing boat produces the equivalent exhaust of 162 diesel school buses! Just like cars and trucks, boats need to use the cleanest available engines and ultimately move away from fossil fuels in order to combat climate change and protect public health.

The technology already exists to make it happen. By shifting to zero emission and cleaner engine technologies, the new protections will cut carcinogenic diesel particle pollution from harbor craft by 89 percent and will cut smog- and particle-forming NOx by more than half by the end of 2038, resulting in an estimated \$5.25 billion in public health benefits between 2023 and 2038, and avoiding hundreds of premature deaths and hospitalizations.

California's Air Resources Board must vote to require that all short run ferries in California be zero-emission by 2026; mandate cleaner engine upgrades for tugboats and workboats; and create options for all other regulated vessels to either upgrade to cleaner diesel or choose a zero-emission compliance pathway.

Thank you.

Subject: EZV batteries

Comment:

Good morning,

we are a border crossing company and we are worried about the batteries on the EZV because lines to cross the border sometimes go up to 6 to 7 hours, in our recent inquires to some truck manufacturers they inform us current batteries run for 130 miles and need to recharge, waiting time at the border will drain the batteries.

Subject: Correction to the graph on adoption

Comment:

If you finance the purchase of a solar and battery system sufficient to power both your building and all the vehicles associated with it, and set the monthly payments equal to your savings, after a few years you will have paid it in full, and your energy (and vehicles - they'll last too) will be nearly free for the next 20 to 60 years or more. So the levelized cost of electricity is likely to be under 3 cents per kWh. For this reason and all the quality of life reasons, people will convert existing vehicles before they would otherwise age out. That will raise the curve dramatically -- it may even become analogous to a land rush. I would like to discuss the additional knowledge behind this statement.

Regards,
Mark Roest

Subject: Advanced Clean Fleet Regulations
Comment:

On behalf of the Otay Mesa Chamber of Commerce, we would like to comment on the Advanced Clean Fleets regulations being proposed by CARB.

Otay Mesa is home to California's largest commercial land port of entry with an estimated 7,000-9,000 truck crossings per day (3,500-4,500 northbound and 3,500-4,500 southbound). Otay Mesa has a unique trucking community, which travels to the maritime ports in the Los Angeles area and works with large manufacturers in Baja California. This phenomenon makes some of our truckers -even small size fleet operators-, fall under the high priority fleet category and/or drayage categories which requires very aggressive transition timelines. We request CARB consider the following changes to the Advanced Clean Fleets regulations:

The January 1, 2024 deadline after which only zero-emission (ZE) drayage trucks may be added to CARB's drayage reporting system should be moved to a future date, when it is actually viable to purchase a ZE truck. Preventing diesel trucks from entering maritime ports will be extremely detrimental to California business and trade. The CARB exemption should also consider pricing and not just availability. If there are very few ZE trucks available, pricing could soar and it would be financially impossible to purchase a ZE truck. Studies show new battery electric trucks cost approximately three times more than the cost of a traditional diesel truck. In addition, the life cycle of a battery electric truck could be much shorter than a regular truck.

It is important for CARB to truly understand the cross-border manufacturing phenomena that moves billions of dollars in both Otay Mesa and Calexico. The amount of truck trips these industries require is certainly not viable to acquire with the new dedicated services being offered and many of them -if not all of them- are restricted from acquiring 100% of trucks trips in California because of Mexican regulations.

Infrastructure to Fuel/charge Zero Emission Vehicle (ZEV) trucks

The proposed regulation does not ensure the required infrastructure will be in place to handle re-fueling/charging ZE trucks along important freight corridors. In addition, investments are being focused on maritime ports and highways even though California's land ports are the gateway to commerce in California. There is a complete disconnect between the timeline CARB is

proposing and the development of charging/re-fueling stations which. CARB should not assume this will be coordinated by the private sector and other California agencies.

Currently, there are no plans to develop a ZE re-fueling/charging station in Otay Mesa, other than a small station that could handle 2 trucks and one private fleet operator that is not a cross-border trucker.

Operators that fall under the priority ruling have trucks in Baja California in addition to Otay Mesa and ZE charging/re-fueling stations are not being developed or even planned in Baja California.

We ask that CARB ensure a public charging/re-fueling station(s) that can handle cross-border trucking needs be funded and built in the vicinity of California's most important commercial land port of entry and the proposed new East Otay Port, so that critical essential goods can keep being transported before the mandate takes place. In FY 2021, more than \$56 billion of imports and exports were processed through the Otay Mesa commercial port of entry.

Timeframes for

Hydrogen Technology

Related to timeframes, it is

important to note that there are many advantages to hydrogen fuel cell technology, especially for long-haul truck use cases, because hydrogen is lighter, it takes less time to re-fuel, and the range is similar to diesel fuel. Hydrogen technology is several years behind battery electric technology. The Otay Mesa community needs time to wait for hydrogen fuel cell technology to be ready to use, investing in a large number of electric charging stations that may become obsolete in a few years when companies have more hydrogen options would result in significant financial loss. Time should be given to industry to plan for the use of hydrogen in the next five years (2028).

Funding

Opportunities

Regarding California's

incentive funding programs to comply with this regulation:

We ask that you consider

funding equity by region, vulnerable populations and size of company, so small and medium size Hispanic operators are not left out.

Before moving forward with

this mandate, the California Energy Commission should have an accurate estimate of energy projections for the increased usage these regulations will generate and ensure the PUC has worked out the viability of this additional energy supply with the California utilities. Specifically, the energy demand estimates being developed in response to Assembly Bill 2127 (2018) and Senate Bill 643 (2021) should be incorporated into the demand estimate used by the PUC. It seems quite logical to state but the fact is that these energy estimates have not been quantified or incorporated into any supply plan.

If approved as is, this new

regulation will have a dramatic and catastrophic impact on supply

chains and inflation. While we completely agree with the climate action challenges our world is encountering, we respectfully request the following:

We ask that the State of California provide an in-depth economic expert analysis of this proposed regulation before implementing, to avoid any potential catastrophic disruptions to our supply chains and California's economy.

Finally, while we appreciate CARB's goal to protect vulnerable communities,

We ask that CARB be forceful in mandating their land use guideline document to Cities and Counties, which would ensure residential communities are not placed adjacent to industrial areas: a simple solution that would protect families from being placed in heavy truck traffic areas.

Comment:

I'm pleased to deliver a letter signed by 45 major companies, health care systems, and investors in support of a more ambitious Advanced Clean Fleets regulation (see attachment). Signatories represent footprints in over 38 states and strongly support California adopting the most ambitious standards for this regulation to accelerate vehicle electrification across states. They see adopting strong vehicle standards as necessary and feasible, with the potential for significant climate, economic, and public health benefits across the U.S.

So many fleets will not meet the threshold of 50 trucks etc to qualify as High Priority.

It is not clear how if at all the smaller size fleets would be affected by the rule. Do they also have to go ZEV just under their own timeline and by a certain date - do they report as well etc?

As business stakeholders operating in California and involved with thousands of businesses, entrepreneurs, and investors representing trillions of dollars in annual economic activity, we write to express our support for the development of a strong and effective Advanced Clean Fleets (ACF) standard.

To fully capture the economic development opportunity presented by the state's robust clean energy economy, we urge the California Air Resources Board (CARB) to adopt an ambitious ACF rule that ensures all medium and heavy-duty (MHD) vehicles are zero-emission no later than 2045, with certain categories, such as drayage, fully transitioning to zero emission-vehicles (ZEV) sales sooner.

Subject: Please Push Forward HD ICE Ban

Comment:

Currently, the regulation by the state is to ban all new internal combustion engine ("ICE") heavy-duty vehicles ("HDVs") by 2045. Existing vehicles will be allowed to continue to operate. However, due to how long modern ICE HDVs last, a ban by that date will not make meeting the mandate of carbon neutrality by 2050 under the Paris Climate Agreement possible. Most modern ICE HDVs last around 1,000,000 miles before needing replacement, which is around 12-15 years with the normal annual mileage. So, it is recommended that the ICE ban for new HDVs be pushed forward to no later than 2038, preferably 2035, in order to be able to meet the target of net zero emissions by 2050 under the Paris Climate Accord. This is an extremely vital mandate to comply with because anthropogenic climate change ("AGCC") is an existential threat to the human species, which will do so by drastically worsening droughts and increasing wildfires by an unimaginably huge amount, consequently severely dwindling food supplies all over the globe. We've already seen the unprecedented string of wildfires and heat waves since 2017, and even that (the present) is still nothing compared to what will come if society continues on pumping out greenhouse gases at the current rate. This means that the worst is still yet to come. As a result, I strongly urge CARB under CalEPA to take urgent drastic action by banning all new combustion engines outside of light-duty vehicles starting by 2035. Even the State of Washington is doing so by just 5 years after that date (2040), so the State of California, which has historically lead on environmental protection regulations, should not let itself fall behind other states. I would appreciate feedback.

Subject: Advanced Clean Fleets Regulation - Commercial Availability
Comment:

July 20, 2022

To: California Air Resources Board

From: Gary Arant, General Manager, Valley Center Municipal Water District

Subject: All Clean Fleets Rule - Commercial Availability of EVs

Dear CARB Commissioners and Staff,

Among retail water agencies, there have been ongoing discussions regarding a critical aspect of a successful implementation of this important regulation. In addition to concerns about a very short time frame for implementation, including the timely installation of required on-site charging infrastructure issue, much attention has been focused on the topic of "Commercial Availability" of suitable Vocational EVs (vehicles water and wastewater utilities will use) and how that will be defined in the final regulation.

In our view, there are many important aspects to the term "Commercial Availability".

Available, but in What Quantities?

1. Vocational EVs may be commercially available but are they available in sufficient quantities to create a competitive bidding environment for public agencies?

Not only should CARB monitor what EVs are commercially available, but also in what quantities are the EVs available to meet the needs of literally hundreds of water, wastewater, and electric utilities to provide a competitive bidding market.

Available but at What Price?

2. In light of regulatory pressure placed on water and wastewater utilities to maintain water and wastewater service affordability, especially to disadvantaged and underserved communities, how much more should a public water/wastewater/ electric utility be required to pay for an EV compared to comparable ICV....30%, 50%, 75%, 100?

CARB ACF regulations need to establish a cost premium cap of 30% beyond which the utility has the option to purchase an ICV.

Available, but what kind of Market?

3. Without items 1 and 2 above, the ACF Regulation is creating a market that requires utilities to purchase Vocational EVs without determining if sufficient quantities exist to create a competitive market and at what cost premium cap. As such, a distorted market emerges where conditions are ripe for unfair pricing (gouging) by

EV manufacturers and retailers.

Without mechanisms in place to determine when sufficient numbers of a particular EV are available to create a bid competitive market and has not set a cost premium cap, then it will need to monitor and regulate the marketing and sales practices of EV manufacturers and retailers.

Available, but When?

4. An important component of Commercial Availability is when can the EV be delivered. 3 to 6 months is reasonable and customary, but not 1 to 2-year estimates of which we are aware. The ability of a utility to function and respond is necessarily tied to the possession of critical and specialized equipment.

CARB needs to set a parameter for EV availability with a delivery timeline not to exceed 6 months and if the quoted delivery time exceeds 6 months, the utility should have the option to reject the bid and purchase a comparable ICV.

In Conclusion

These provisions will incentivize EV manufacturers and retailers to produce Vocational EVs in sufficient quantities to facilitate a competitive bidding environment for vehicles priced reasonably comparable to ICV prices and with acceptable delivery periods. While this may delay the effective implementation of ACF at the agency level, it will help to guarantee the long-term success of the regulation.

Thank you for your consideration.

Gary T. Arant
General Manager

Comment 172 for Informal Public Comments on the Proposed Advanced Clean Fleets Rulemaking (acf-comments-ws) - 1st Workshop.

First Name: Tenille

Last Name: Otero

Email Address: totero@otaywater.gov

Affiliation:

Subject: Comments on Draft Reg Language for Advanced Clean Fleets Regulation Fleet Requirements

Comment:

Attached is the Otay Water District's comment letter from our General Manager Jose Martinez on the Draft Regulatory Language for the Advanced Clean Fleets Regulation Public Fleet Requirements. Please contact me at totero@otaywater.gov or at 619-670-2256 or Charles Mederos at cmederos@otaywater.gov or 619-670-2231 if you have any questions regarding our letter.

The Otay Water District provides essential public services including water, recycled water, and sewer services to more than 226,000 customers within approximately 125 square miles of southeastern San Diego County, including the communities of eastern Chula Vista, Bonita, Jamul, Spring Valley, Rancho San Diego, unincorporated areas of El Cajon and La Mesa, and eastern Otay Mesa along the international border with Mexico.

Otay operates a range of vehicles, which serve the purpose of providing day-to-day operations and emergency-response services within its service area. Currently, the District has 86 vehicles in our public fleet including construction, utility repair, utility monitoring, and customer service vehicles.

Thank you for the opportunity to comment.

Tenille Otero
Communications Officer
Otay Water District

Subject: IEUA: Considerations for Water and Wastewater Utilities

Comment:

Hello,

IEUA would appreciate the consideration of the comments provided in the attached letter on the proposed advanced clean fleet regulation language. Water and wastewater utilities face unique challenges as essential public services and IEUA hopes the comments provided will assist CARB staff in addressing these unique needs in the regulation language.

Thank you,

William McDonnell
