Subject: Offset Protocols Under Cap and Trade

Comment:

Clearcutting is a corporate profit driven forestry management practice. It is practiced so that for-profit corporations can take as many \$\$ off the land as possible.

To include this practice as a way to offset carbon is to visit on California a very short term vision that in the long run will destroy our watersheds and water supply.

We need to limit pollution and invest in cleaner technology!

Comment:

To the California Air Resources Board;

Please cancel the Rice Cultivation Projects Compliance Offset Protocol and all existing and proposed Compliance Offset Protocols under the Cap-and-Trade Regulation.

Carbon offsets are a greenwashing scam that more and more people are seeing through. We all need to REDUCE our carbon footprints, not palm off the responsibility to people in some other location.

Carbon offsets should be excluded from California's Global Warming Solutions Act AB32.

Sincerely,
Jude Todd, PhD

Comment:

The dominant culture has been wrong in every endeavor. How do we know this? We're cultivating food so we can keep the "machine" of empire running. We can either keep playing the game of infinite growth on a finite planet, aka Jenga! OR we can begin to listen to those who have had the boot heel of this culture upon their collective throats. I'm gonna go with those whose ancestors have lived sustainably for the first 3 million years of the human experience. You can go with the rice protocol but sanity will clearly not be on your side...or life.

Subject: No REDD rice!

Comment:

To the California Air Resources Board:

No one in America (with the possible exception of the corporations and the rich) needs a gimmick that allows polluters to continue to pollute.

Please cancel the Rice Cultivation Projects Compliance Offset Protocol and all existing and proposed Compliance Offset Protocols under the Cap-and-Trade Regulation.

Offsets are a false solution to climate change and must be excluded from California's Global Warming Solutions Act AB32.

Native peoples around the world have seen through the gimmicks and are opposed to such schemes as "cap and trade." Crops that are vital to the cultural survival of so many peoples are being damaged or are in danger of disappearing, because of gross manipulation of life in all its forms. Such things as this rice project you have before you must be cancelled.

Thank you in advance for taking this action.

Sincerely,
John Funiciello

Subject: REDD Rice

Comment:

It is unconscionable to implement REDD (i.e., Reducing Emissions from Deforestation and Degradation) as part of the Cap-and-Trade regulation. Dubious at best and spurious at worse, to advance the continuation of carbon pollution with the slight of hand of good-practice-farming as an off-set is duplicitous and enabling of polluter indifference and insensitivity. Not to mention the cost to the environment and food supply by introducing GMO-altered plants. Contaminating the human food supply is not justified by fertilizer reproduction. Don't be dazzled by high-tech "solutions" suggested by the masters of deception like Monsanto. Common sense must rule over greed and slick and specious theorems based on self-interest research devoid of long-term proof of benefit against long-term detriment.

First Name: Jo

Last Name: Woodman

Email Address: jw@survivalinternational.org

Affiliation: Survival International

Subject: Alternative approaches that do not violate rights

Comment:

Survival International, the worldwide movement for tribal peoples' rights, is deeply concerned about this program. REDD is inherently geared towards benefiting polluting companies, that will use REDD to cheaply 'offset' their carbon emissions, rather than actually reduce them. It risks violating the rights of the tribal and indigenous peoples on whose land these projects will be implemented, including their rights under the UN Declaration on the Rights of Indigenous Peoples and under ILO Convention 169. Governments that support and finance these programs will be liable for violations of these rights.

Alternatives to REDD exist, and the Government of California would be advised to focus its resources into supporting the land rights of tribal and indigenous peoples, and into supporting their efforts to protect and sustainably manage their forests, whilst simultaneously ensuring that the emissions of polluting industries in the state of California are effectively reduced rather than 'offset'.

Subject: No Rice Offsets! No REDD! No Carbon Trading!

Comment:

Dear Mary Nichols and members of CARB;
Carbon Trade Watch, an international watchdog and think tank on the adverse impacts of carbon trading and offsets, writes to urge you to reject and definitively cancel CARB's proposed rice cultivation offset protocols and all of its adopted and proposed offset protocols as well as cap-and-trade.

Our expert research has repeatedly demonstrated that carbon trading and carbon offsets including REDD are a scam and make global warming worse. Please see the library of our reports:

<http://www.carbontradewatch.org/>

Please enter into the public record our book, The No REDD Reader, which features ground-breaking articles about the extractive industries behind REDD, how REDD threatens the survival of Indigenous Peoples in Voluntary Isolation in the Peruvian Amazon, and other key issues.

For AB32 to propose solutions to global warming, it must not include carbon offsets or carbon trading. There is no substitution to capping pollution at source.

Sincerely,

Tamra Gilbertson

Subject: No REDD Rice Manifesto from 30 countries

Comment:

To the California Air Resources Board,
On behalf of over 125 organizations from 30 countries, I
respectfully submit the No REDD Rice Manifesto to you to request
that you cancel the proposed Rice Cultivation Projects Compliance
Offset Protocol and all existing and proposed Compliance Offset
Protocols under the Cap-and-Trade Regulation. Carbon offsets, REDD
and carbon trading are false solutions to climate change and must
be excluded from California's Global Warming Solutions Act AB32.
The vast diversity of the signatories of the No REDD Rice Manifesto
includes social movements of Indigenous Peoples, peasants, organic
farmers, anti-GMO activists, environmentalists, scientists, women,
youth, and cooks from California and all regions of Mother Earth.
The world is uniting to stop the State of California from using our
sacred staple crop for carbon offsets.

Our food is not a sponge for your pollution. Our agriculture can
not be used as an excuse for California's big polluters like
Chevron to continue to spew greenhouse gas emissions and destroy
the climate. Our climate and our future are not yours to destroy.
Mother Earth and her peoples respectfully call on you to
definitively reject rice offsets and cut emissions at source.

Sincerely,

Tom B.K. Goldtooth

Executive Director of the Indigenous Environmental Network

Subject: No REDD Rice, No Rice-based Carbon Credits

Comment:

We, the undersigned Indigenous Peoples, peasants, fisherfolks, immigrants, women, youth, cooks and civil society of the world gathered in Bali to protest the WTO, know that rice is a sacred staple crop which feeds billions of peoples worldwide. We, who courageously resist efforts to impose the use of genetically modified so-called "Golden Rice" of Monsanto, now unite to defend rice from being used as a part of capitalism of nature and carbon markets - "REDD Rice".

Since 2007, the United Nations, World Bank and fossil fuel polluters like Shell and Chevron and mining company Rio Tinto, have been pushing a carbon trading regime called REDD1 (Reducing Emissions from Deforestation and Degradation). REDD uses agricultural land, soils, forests and tree plantations as sponges for greenhouse gas emissions. Now these climate polluters want to use rice as an offset for their pollution instead of reducing emissions at source. Market-based solutions for addressing the climate crisis are a false solution.

We do not want our rice paddies or rice beds to be excuses for more pollution which causes global warming and typhoons. For peasant farmers, REDD+ constitutes a worldwide counter-agrarian reform and perverts the task of growing food into "farming carbon." The UN and northern industrialized countries have introduced other false solutions to climate change such as "Climate-Smart Agriculture". In Africa, where climate-smart carbon credit projects are being promoted, peasant farmers are starting to resist the use of their lands and soil for carbon sequestration, which is a carbon market scheme of capitalism. These new soil carbon markets are opening the door for more GMO crops and land grabs.

"Climate-ready" seeds and other supposed GMO climate fixes like "REDD Rice" are just more attempts of the biotech industry and agribusiness to deform, patent and control our seeds, grab our fields, privatize our soils and turn us into landless, indentured servants of capitalism.

Slated for next spring 2014, California may include rice cultivation as carbon offsets in its climate change law known as California's Global Warming Solutions Act (AB32). The proposed rice cultivation offset protocol will pretend to reduce emissions through a cropland agricultural protocol using for the first time, a BIO- GEO-CHEMICAL model, which supposedly "emulates" soil processes. One of the methods for supposedly cutting emissions is to replace wet seedlings with dry seedlings. This will include growing GMO rice and the use of genetically modified "soil nutrients".

China and California would be working with biotechnology companies that would privatize, patent and sell genes that supposedly allow rice plants to use less fertilizer. As part of economic globalization, this gene-knowledge and rice offsets would be sold

to the highest bidder to meet their emissions reduction targets on the emerging global market for carbon credits.

If applied on a massive scale, genetically modified REDD Rice could contaminate rice farmers' lands and seeds with enormous adverse environmental, social and cultural consequences.

- No to Privatization and Commodification of Rice!
- No WTO of our RICE!
- No WTO of Nature, Food and Life!
- NO REDD Rice!

Honoring our martyrs who have fallen for defending our land and territories, we commit to defend rice as Life and part of our movement for food sovereignty. We oppose using rice as part of the carbon market. We oppose the corporate genetic manipulation of our rice. We oppose the Green "Greed" Economy being pushed by the WTO that privatizes Nature as "environmental goods and services". Defend our Mother Earth and say NO! to the trading of Life and the air that we breathe and the food that we eat.

Subject: Stop Proposed Rice Cultivation Offset Protocol

Comment:

To the California Air Resources Board:

Please cancel the Rice Cultivation Projects Compliance Offset Protocol and all existing and proposed Compliance Offset Protocols under the Cap-and-Trade Regulation. Carbon offsets and carbon trading are false solutions to climate change, it will not solve the problems rather creating permit to polluting for big industries and allowing states to do Business as Usual.

GRAIN's research has shown that a sustained focus on peasant-based agroecological practices oriented toward restoring organic matter to soils could capture 24-30% of the current global annual greenhouse gas emissions. Turning rice fields into carbon sink will only drive us further from the real solutions and destroy the source of livelihood for million of people, thus it must be excluded from California's Global Warming Solutions Act AB32.

Sincerely,
Kartini Samon

Subject: Rice Cultivation Project Protocol

Comment:

I am writing now because I am very concerned that the carbon offset protocols under the Air Resources Board's jurisdiction do not reflect environmentally sustainable practices and that their drafting has been subject to excessive influence from the same corporate interests designated as polluters. I have researched this in depth. Recent proposed protocols include the Mine Methane Capture protocol and the Rice Cultivation Project protocol. Both of these were written in tandem with input from "stakeholders," meaning some of the same vested industry interests, and both of them are written for the fossil fuel industry and big agriculture. Neither of them offers a truly viable alternative option, at a time when alternatives in both energy and agriculture do exist. Why aren't the energy offsets being written for solar, wind, and geothermal development? Why doesn't the rice offset reflect the environmental developments to protect wetlands or acknowledge the System of Rice Intensification or the organic/permaculture movements that have become globally widespread?

I am attaching a copy of a document that summarizes my research on the latter offset.

Subject: Cancel the Rice Cultivation Projects Compliance Offset Protocol

Comment:

To the California Air Resources Board;

Dear members of the California Air Resources Board,

Find attached our declaration and some worst cases of REDD-type projects in Africa as well as a report on the Sengwer Report on the indigenous people evictions in Kenya.

In short we demand that you, please, cancel the Rice Cultivation Projects Compliance Offset Protocol and all existing and proposed Compliance Offset Protocols under the Cap-and-Trade Regulation. Offsets and carbon trading are a false solution to climate change and must be excluded from California's Global Warming Solutions Act AB32.

Sincerely,

Boaventura Monjane
For the No REDD in Africa Network

Comment:

I, Linda Delair, stand with all intelligent, life loving people who completely reject the use of any GMO products anywhere on Earth. We, the undersigned Indigenous Peoples, peasants, fisherfolks, immigrants, women, youth, cooks and civil society of the world gathered in Bali to protest the WTO, know that rice is a sacred staple crop which feeds billions of peoples worldwide. We, who courageously resist efforts to impose the use of genetically modified so-called "Golden Rice" of Monsanto, now unite to defend rice from being used as a part of capitalism of nature and carbon markets - "REDD Rice".

Subject: Rice protocol comments

Comment:

2.2 Early drain activities

Unclear to me why 75% heading is used. Usually 50% heading is referred to.

Unclear how these samples are to be taken. Are you referring to a percentage of plants or panicles? These are different. A plant contains a number of panicles. The primary panicle usually reaches heading before the secondary or tertiary panicles.

Also, not sure why a sample needs to be taken so close to the inlet. This is a very unrepresentative portion of the field. Two problems with this (1) The inlet water is cold in many irrigation districts and these plants will be significantly delayed relative to the rest of the field (2) often the rice stand is very sparse so close to the inlet because the water comes into the field at a high volume which can uproot young seedlings.

Depending on who is taking these samples they can pick samples to suit their desires. Even within a relatively uniform field check, there can be a difference in crop development of over a week.

The protocol assumes that all rice varieties and in all years the field can be drained at this time period. Most crops develop on a basis of degree days (DD) so that in a cool year it takes longer to reach a certain growth stage than in a warmer year. Very little work has been done on looking at growth stages following heading.

Also, it is safe to assume that varieties differ in this regard. I would suggest making the drain date based on a particular growth stage rather than a number of days after a certain stage. In the south, a lot of draining occurs around R7 which is approximately 3 weeks after heading but this is approximate (varies with variety and seasonal temps). R7 is also a defined growth stage that is relatively easy to determine in the field.

2.3 Alternate Wet and Dry Activities

The AWD procedure dictates that the soil must remain above 35% moisture level. What is this? Is this 35% of what? This needs to be clarified as there are many different ways to determine soil moisture.

What research is this 35% moisture based on? I assume it is to minimize N2O emissions. However, low N2O emissions is more likely to be the result of good water and N management. Fields should not be drained or allowed to dry when there is a lot of N in the soil.

How is a grower going to tell when the top 10 cm is not saturated but remains above 35%?

The biggest problem with this is that fields are highly variable with some parts likely to be still flooded while other parts are aerobic. The protocol mentions that saturated parts of the field will not be credited but how will this be accomplished without either a lot of walking the field or sensors? In non-zero graded fields the fields are sloped so you will have flooded conditions at the bottom of the field but at the top you may achieve the desired soil moisture but only in a small uppermost part of the field. The rest of the field is a variation between saturated and this "ideal" point.

How will yield losses be handled?

Not clear why N2O is not accounted for in this protocol. Just about all research in this area show higher N2O losses associated with AWD compared to a continuous flood. The amount of N2O losses is highly variable. With poor water and N management (result of poor timing) N2O emissions can be extremely high. For example letting the field dry or drain shortly after fertilizer applications can result in high N2O emissions and denitrification losses.

Alternatively, with good management N2O emissions (while perhaps higher) may be almost negligible.

3.1 General Eligibility Requirements

I am curious as to why the protocol requires that rice be grown of the same maturity. There is no indication in the literature that crop duration affects GHG emissions. Furthermore, by doing this one discourages growers from using shorter duration varieties which may save water. Really there is no published data suggesting any of the currently used US varieties differ in terms of emissions. I am aware of some publications that are forthcoming which show varietal differences. However, the research groups have not identified varietal characteristics of low emitters that the DNDC could use.

3.2 Location

I have not seen, nor am I aware, of any published research where measured field emissions have been calibrated and validated using the DNDC model anywhere in the US. This whole protocol is based on the ability of the DNDC model to accurately predict emissions from these various mitigation practices. The model needs to be peer reviewed before this protocol goes into effect.

Appendix A Pg 48

Recording harvest date is mentioned twice: (a-3) and (a-7)

Appendix B: Table B DNDC input parameters.

Where do these numbers come from? These should be referenced. Some of the data look strange to me. For example, why the difference in Grain:Shoot:Root fractions between the various locations. Also, should not the sum of those fractions be equal to 1.0? They are for California but not MRD (0.78) and LGC (0.76). I also find it strange that the optimum temperature is so different among regions (20 vs 25). I do not believe this is supported by the literature. In step 2 it seems that one is adjusting the model to "fit" the data. In this case to fit the yields. This may require more or less thermal time to achieve the best fit. By adjusting this thermal time one is also changing the duration of the crop. Usually longer crop duration requires a longer flood period. However, in these cases your flood periods are fixed (farmers provide you with those).

Comment:

To Governor Jerry Brown;

To the Chair and members of the California Air Resources Board;

The No REDD Working Group writes to respectfully request that you cancel the Rice Cultivation Projects Compliance Offset Protocol and all existing and proposed Compliance Offset Protocols under the Cap-and-Trade Regulation. Carbon offsets and carbon trading are false solutions to climate change and must be excluded from California's Global Warming Solutions Act AB32.

Offsets are a cynical emissions shell game at the service of polluters and financial speculators that do nothing to address global warming.

Do not use our rice for carbon trading. Rice is food not an offset. California must cut GHG emissions at source. There is no alternative.

Furthermore, you must stop allowing Shell to supposedly offset its Martinez refinery with Michigan's forests. You must also stop negotiating buyer or seller liability of forest carbon offsets with Chevron. CARB: Get out of bed with California's worst polluters and down to the work of transforming California's dependence on fossil fuels.

We want real action now.

The No REDD Working Group

Subject: Comments in Support of the Rice Offset Protocol

Comment:

The Climate Action Reserve supports the decision by California Air Resources Board (ARB) to develop its Rice Protocol and strongly encourages the ARB Board to adopt this protocol. The Reserve developed our own Rice Cultivation Project Protocol in 2011, and has actively engaged throughout ARB's Technical Working Group process for the Rice Protocol. Based on these experiences, we believe that the ARB staff has done an excellent job on the Draft Rice Protocol, particularly in terms of working with stakeholders to resolve concerns and improving upon existing methodologies such as ours. While we have a number of comments on the Draft Rice Protocol, we do believe many of the Reserve's concerns may be easily resolved, and ultimately we support this protocol going before the Board for adoption in the near future.
