

# Signing up and using Shurepower is easy

1. Pull into an open Shurepower equipped parking space.
2. Make sure the pedestal breaker switches are in the off position.
3. Plug in your heavy-duty extension cord and note the connection number listed on the power pedestal.
5. Call 1-888-841-3137 and give the Shurepower agent your location, connection number and payment information.
6. Return to the pedestal and turn on the breaker switches.

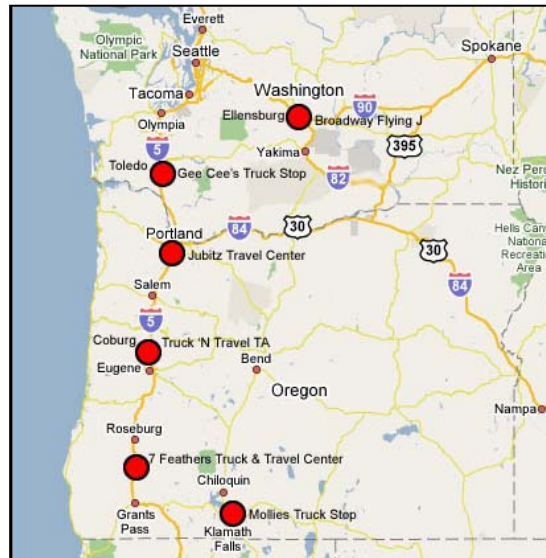

For technical support or questions,  
call toll-free (888) 841-3137

## Shurepower Network

The following facilities will be operational in August 2007:

- Jubitz Travel Center – Portland, OR (I-5 Exit 307)
- Truck 'N Travel TA – Coburg, OR (I-5 Exit 199)
- Mollies Truck Stop – Klamath Falls, OR (US 97 North)
- Broadway Flying J – Ellensburg, WA (I-90 Exit 109)
- Gee Cee's Truck Stop – Toledo, WA (I-5 Exit 57)

A Shurepower facility will be added at the 7 Feathers Truck & Travel Center in Canyonville, Oregon later this year.

## Expanding the Network

Shurepower is currently expanding its network of shore power facilities throughout North America. If you or someone you know is interested in bringing a facility to your area please contact us using the information below.

## What is Shurepower?

Shurepower offers easy access to electricity that allows truck drivers to turn off their engines and power cab appliances, accessories, and block heaters. Most locations also include high-speed (WiFi) Internet and cable TV.

## Why use Shurepower?

Using Shurepower saves money, fuel, and the environment. Using Shurepower's services also ensures compliance with anti-idling laws.

## What is the cost?

Shurepower costs \$0.75 per hour for power only or \$1.00 per hour for the following services:

- Electricity for cab appliances and accessories – 120 & 208 volt alternating current (VAC)
- Block heater electricity
- High-speed wireless Internet access
- Cable TV

Given the savings in fuel costs and engine maintenance, Shurepower use can save more than 60% the expense of idling overnight.

## What do I need to hook-up?

In order to connect, you need:

- a heavy-duty extension cord
- a credit card or fleet account
- Shore power capability on your vehicle (an option for most new cabs). You can also simply run an extension cord into the cab.

**No connection, no problem!** Retrofitting your vehicle is simple and takes less than 1 hour. Kits start as low as \$199. Go to: [www.shurepower.com](http://www.shurepower.com) for more extensive kits that include on-board electric heating and AC.

## How It Works

Shurepower delivers 120 and 208VAC electricity to trucks in a manner similar to shore power connections at RV parks and marinas. Virtually all major heavy-duty truck manufacturers recognize the benefits of shore power technology and offer such systems on their Class 8 sleeper cab models.

## What are the benefits?

Using Shurepower results in significantly lower fuel and engine maintenance costs. Drivers benefit from a better night's rest in addition to cleaner, healthier air.

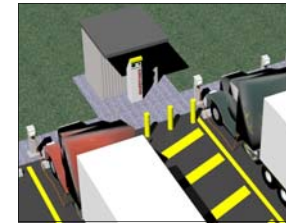

## The Shurepower Advantage

Class 8 long-haul tractors spend over 1,800 hours a year idling for heating, cooling, and powering electrical appliances. At an hourly diesel fuel consumption rate of 1 gallon and with diesel fuel averaging nearly \$3.00 per gallon, more than \$5,000 per year is wasted on fuel alone.

Shurepower provides electrical hookups to power cab accessories and appliances, and is a cleaner, quieter alternative to engine idling during rest stops.

# Everybody Wins with Shurepower!

Call Shurepower's toll-free number to activate the services. You'll receive power and entertainment for a fraction of the cost of idling your engine. Get traffic and weather reports before hitting the road!

The Shurepower Pedestal, shown above, is the heart of the system. It delivers inexpensive, reliable, high quality 120 and 208 VAC power, Internet and Cable TV to the cab.
