Open Letter to California Air Resources Board and California Energy Commission

Re: Allegations Made in Electrify America Cycle 2 Plan Comments

Dear Chair Nichols, Chair Weisenmiller, Boardmembers, and Commissioners:

Our company is currently implementing multiple electric vehicle charging corridor grants on behalf of the Energy Commission. We have been very pleased to work with commission staff on these projects and are making excellent progress. The Recargo team has directly acquired site hosts, developed engineering packages, procured equipment, and stands ready to complete comprehensive charging corridors under these grant awards.

As a result of comments submitted to the Air Resources Board in the Cycle 2 investment plan approvals, I have been made aware of allegations of impropriety and anti-competitive behavior by Electrify America staff in California. I have reviewed these allegations with my team and want to report to you that our site developers have encountered none of the problems reported in the comments submitted by other companies. Our team is available to you at your convenience if you would like to further explore our experience in the field.

We share the state's mission to electrify transportation and are proud to play a role. Thank you for considering this direct input from our field operations.

Sincerely,

A handwritten signature in black ink, appearing to read "Brian Kariger".

Brian Kariger
Chief Executive Officer
