

Notice of correction:

Page 1 of the Executive Summary of the Staff Report, Initial Statement of Reasons for Public Hearing to Consider Adoption of Regulation for the Certification, Performance Standards, and Test Procedures for Portable Outboard Marine Tanks and Components (released August 8, 2008), incorrectly states that the proposed performance standard for portable outboard marine tanks is 2.5 grams per meter squared per day. The proposed standard, as correctly noticed that day in proposed "CP-510, Certification Procedure for Portable Outboard Marine Tanks and Components" and as correctly identified elsewhere in the Staff Report, is 1.5 grams per meter squared per day.
