

**Exemption List by County for  
Section 93113, title 17, California Code of Regulations  
Airborne Toxic Control Measure to Reduce Emissions of Air Toxics from Outdoor Residential Waste Burning (ATCM)**

**January 2004 (updated 5/21/04; 1/7/13; 4/19/13; 4/24/13; 9/18/2013)**

The ATCM contains two "prohibitions" that take effect on January 1, 2004:

Section 93113 (c)(1): "No person shall burn **disallowed combustibles** from any property for the purpose of disposing of waste material outdoors at a residence, except as provided under subsection (e), 'Exemptions', below."

"Disallowed Combustibles" means any waste or manufactured material, including but not limited to petroleum products and petroleum wastes; construction and demolition debris; coated wire; putrescible wastes; tires; tar; tarpaper; non-natural wood waste; processed or treated wood and wood products; metals; motor vehicle bodies and parts; rubber; synthetics; plastics, including plastic film, twine and pipe; fiberglass; styrofoam; garbage; trash; refuse; rubbish; disposable diapers; ashes; glass; industrial wastes; manufactured products; equipment; instruments; utensils; appliances; furniture; cloth; rags; paper or paper products; cardboard; boxes; crates; excelsior; offal; swill; carcass of a dead animal; manure; human or animal parts or wastes, including blood; and fecal- and food-contaminated material. For purposes of this regulation, dry, natural vegetation waste from yard maintenance is not a disallowed combustible, if reasonably free of dirt, soil and surface moisture.

Section 93113 (c)(2): "No person shall dispose of **allowable combustibles** from any property by burning them in a burn barrel or incinerator outdoors, except as provided under subsection (e), "Exemptions", below."

"Allowable Combustibles" means dry natural vegetation waste originating on the premises and reasonably free of dirt, soil and visible surface moisture.

Section 93113 (e) describes the procedure for establishing the "exemption areas." These exemption areas include all census area zip codes with a population density of 3 or fewer people per square mile, according to the most recent decennial census (initially year 2000). During 2003, all air districts were also given the opportunity to determine additional low population exemption areas. In the exemption areas, the following can be allowed:

- (a) burning dry, non-glossy paper and cardboard is allowed in addition to burning vegetation, and
- (b) burn barrels or incinerators can be used to burn allowable combustibles (vegetation, paper or cardboard).

These exceptions are temporary and do not apply where any local ordinance or enforceable mechanism is in place that otherwise prohibits the exception. The exemption areas will be evaluated for renewal every ten years using the most recent census. Exemption areas and exceptions effective on January 1, 2004, will either be renewed or expire every ten years thereafter, depending on the updated population density.

ARB has reviewed all of the "Requests for Exemptions" from Air Districts in 2003, and approved the exemption areas and exceptions described herein. Table A lists Air Districts by County restricting outdoor residential waste burning, where there are no exemption areas or exceptions. Beginning on page 4, Table B lists Air Districts with exemption areas and exceptions by County, and by zip code tabulation area (ZCTA) or by the alternative mapping unit used by the respective Air District to determine population density. The County page includes a link to the Air District for further information. In most Counties, residents should be able to check their zip code to find out if their residence falls within an exemption area and what exceptions, if any, apply. Any alternative method for determining exemption areas is referenced on each County page to the respective Air District.

*Initial Publication Date: January 2004, Updated May 2004 for Colusa County APCD and Glenn County APCD  
Updated January 2013 for Feather River AQMD; Updated September 2013 for San Luis Obispo APCD, El Dorado County AQMD, and Placer County APCD*

**TABLE A - Implementing the Residential Burning ATCM**

Prior to the adoption of the Statewide ATCM in 2002, several air districts prohibited the use of burn barrels and burning residential waste outdoors. After 2003, additional air districts prohibited the use of burn barrels and banned outdoor burning of all but vegetation waste at residences. If you reside in one of the following counties, contact the appropriate air district to find out whether vegetation waste can be burned outdoors at residences, and under what conditions in your area.

\* "Census zip code" means a Zip Code<sup>®</sup> tabulation area, a statistical geographic entity that approximates the delivery area for a U.S. Postal Service five-digit Zip Code. Census zip codes are aggregations of census blocks that have the same predominate Zip Code associated with the mailing addresses in the U.S. Census Bureau's Master Address File. Census zip codes do not precisely depict Zip Code delivery areas, and do not include all Zip Codes used for mail delivery. For the purposes of this regulation, census zip codes are referenced to the most recent national decennial census completed by the U.S. Census Bureau.

\*\* "Population density" means the number of people per square mile within a census zip code. It is calculated as the number of people within a census zip code divided by the area of the census zip code after subtracting the population and area of all incorporated places within the census zip code.

\*\*\* Only dry natural vegetation waste, originating on the premises, and reasonably free of dirt, soil and visible surface moisture can be burned outdoors, if not already prohibited by local rule or ordinance. Burn barrels and incinerator use is prohibited.

\* "Census zip code" means a Zip Code<sup>®</sup> tabulation area, a statistical geographic entity that approximates the delivery area for a U.S. Postal Service five-digit Zip Code. Census zip codes are aggregations of census blocks that have the same predominate Zip Code associated with the mailing addresses in the U.S. Census Bureau's Master Address File. Census zip codes do not precisely depict Zip Code delivery areas, and do not include all Zip Codes used for mail delivery. For the purposes of this regulation, census zip codes are referenced to the most recent national decennial census completed by the U.S. Census Bureau.

\*\* Only dry natural vegetation waste, originating on the premises, and reasonably free of dirt, soil and visible surface moisture can be burned outdoors, if not already prohibited by local rule or ordinance. Burn barrels and incinerator use is prohibited.

\* "Census zip code" means a Zip Code<sup>®</sup> tabulation area, a statistical geographic entity that approximates the delivery area for a U.S. Postal Service five-digit Zip Code. Census zip codes are aggregations of census blocks that have the same predominate Zip Code associated with the mailing addresses in the U.S. Census Bureau's Master Address File. Census zip codes do not precisely depict Zip Code delivery areas, and do not include all Zip Codes used for mail delivery. For the purposes of this regulation, census zip codes are referenced to the most recent national decennial census completed by the U.S. Census Bureau.

\*\* "Population density" means the number of people per square mile within a census zip code. It is calculated as the number of people within a census zip code divided by the area of the census zip code after subtracting the population and area of all incorporated places within the census zip code.

\*\*\* Only dry natural vegetation waste, originating on the premises, and reasonably free of dirt, soil and visible surface moisture can be burned outdoors, if not already prohibited by local rule or ordinance. Burn barrels and incinerator use is prohibited.

\* "Census zip code" means a Zip Code<sup>®</sup> tabulation area, a statistical geographic entity that approximates the delivery area for a U.S. Postal Service five-digit Zip Code. Census zip codes are aggregations of census blocks that have the same predominate Zip Code associated with the mailing addresses in the U.S. Census Bureau's Master Address File. Census zip codes do not precisely depict Zip Code delivery areas, and do not include all Zip Codes used for mail delivery. For the purposes of this regulation, census zip codes are referenced to the most recent national decennial census completed by the U.S. Census Bureau.

\*\* "Population density" means the number of people per square mile within a census zip code. It is calculated as the number of people within a census zip code divided by the area of the census zip code after subtracting the population and area of all incorporated places within the census zip code.

\*\*\* Only dry natural vegetation waste, originating on the premises, and reasonably free of dirt, soil and visible surface moisture can be burned outdoors, if not already prohibited by local rule or ordinance. Burn barrels and incinerator use is prohibited.

\* "Census zip code" means a Zip Code<sup>®</sup> tabulation area, a statistical geographic entity that approximates the delivery area for a U.S. Postal Service five-digit Zip Code. Census zip codes are aggregations of census blocks that have the same predominate Zip Code associated with the mailing addresses in the U.S. Census Bureau's Master Address File. Census zip codes do not precisely depict Zip Code delivery areas, and do not include all Zip Codes used for mail delivery. For the purposes of this regulation, census zip codes are referenced to the most recent national decennial census completed by the U.S. Census Bureau.

\*\* "Population density" means the number of people per square mile within a census zip code. It is calculated as the number of people within a census zip code divided by the area of the census zip code after subtracting the population and area of all incorporated places within the census zip code.

\*\*\* Only dry natural vegetation waste, originating on the premises, and reasonably free of dirt, soil and visible surface moisture can be burned outdoors, if not already prohibited by local rule or ordinance. Burn barrels and incinerator use is prohibited.
