Mr. Lee Christensen
Vice President of Operations
E.J. Ward, Inc.
8801 Tradeway
P.O. Box 17888
San Antonio, Texas 78217-0888

Dear Mr. Christensen:

Thank you for requesting California Air Resources Board (CARB) approval of the E.J. Ward RF Module (part number NOZ-RF) for use on vapor recovery nozzles. The RF Module is a self-contained (wireless) box that transmits information from vehicle to dispenser through use of radio frequency. The RF Module is externally mounted on vapor recovery nozzles and secured by two UV-resistant nylon tie wraps.

CARB staff has reviewed all information submitted and conducted visual inspections of three installed RF Modules. CARB staff has also evaluated these three installed RF Modules to verify that they do not interfere with the dispenser when hung and when fueling a vehicle. Based on our evaluation, we find the use of the RF Module, when installed in accordance with the manufacturer recommended instructions, will not adversely affect the vapor recovery systems on which they are installed. Following the manufacturer installation instructions the RF Module can be installed on balance and assist vapor recovery nozzles in the top or left side position.

As required by California State Law (H&SC Section 41955), the approval of three State agencies are a prerequisite to certification by CARB. The appropriate letters of approval have been received and are listed as follows:

The energy challenge facing California is real. Every Californian needs to take immediate action to reduce energy consumption. For a list of simple ways you can reduce demand and cut your energy costs, see our Website: <http://www.arb.ca.gov>.

California Environmental Protection Agency
